Future Insights:

# The Future Living Report 2021

Beauhurst

HUCKLETREE

# Contents and methodology

Beauhurst identifies ambitious businesses using eight triggers (outlined at the bottom of this page) that suggest a company has high-growth potential. More detail on Beauhurst's tracking triggers is available via its website.

**EQUITY INVESTMENT**
To be included in the analysis, any investment must be:

- Some form of equity investment
- Secured by a non-listed UK company
- Issued between 1 January 2011 and 31 December 2020

**ANNOUNCED AND UNANNOUNCED FUNDRAISINGS**
An unannounced fundraising is an investment made into a private company that is completed without press coverage or a statement from the recipient company or funds that made the investment. These transactions are an integral part of the UK's high-growth economy, accounting for around 70% of all equity transactions.

**HIGH-GROWTH TRIGGERS**

- Equity investment
- Academic spinouts
- Scaleups
- High-growth lists
- Accelerator attendance
- Major grant recipients
- MBO/MBI
- Venture debt

Foreword

# Avee Viravaidya, Membership Manager, Huckletree White City

We're excited to be working with Beauhurst to produce this series of industry reports, examining UK companies that will shape the future of how we consume retail, media and food. In the second of three reports, we focus on the Future Living industry that's transforming the lived experience: how we parent, educate, track our health, find mental wellbeing and even care for our pets.

The technological age has empowered us to create more harmony with the continuously moving parts of our lives. The Future Living sector is enhancing this, innovating everything from solutions to the most major healthcare challenges to creatively inventing ways to heighten our learning capacity.

From the rise of ParentTech and EdTech to Artificial Intelligence and the IoT (Internet of Things), consumers guide the Future Living sector by their increased desire for optimisation, convenience and enhancement of their lives.

The high-growth Future Living sector houses 1,661 active companies. London is a hotspot for activity in the sector (718 active companies), with Edinburgh (36), Manchester (30) and Leeds (30) also generating Future Living innovation. The industry has collectively raised £4.8b of investment between 2011 and 2020, as well as £246m of grant funding. The space is also home to some of the UK's most notable unicorns and former unicorns, including healthcare company babylon. This report will hone in on three sub-industries: HealthTech, EdTech, and ParentTech.

HealthTech is a rapidly growing sector, with 425 active high-growth companies predominantly based in London (205), which is fast establishing itself as a hotbed for HealthTech. Innovation focuses on the prevention, diagnosis, monitoring, and treatment of different health conditions. The use of AI in this space supports healthcare workers in making more informed decisions and, ultimately, providing more effective solutions.

*"From the rise of ParentTech and EdTech to Artificial Intelligence and the Internet of Things, consumers guide the Future Living sector by their increased desire for optimisation, convenience and enhancement of their lives."*

The largest emerging sector in the Future Living sphere is EdTech. Over 500 active companies make up this ecosystem. With over half of them still in seed-stage, this is a space to watch. Three themes have materialised in EdTech: gamification, virtual reality, and artificial intelligence. Each of them creatively conjures ways to amplify the way we learn.

With over 150 high-growth companies in the UK, ParentTech refers to technology designed to ease the challenges of parenthood. It's also an industry notable for gender equality, with many women entrepreneurs innovating after experiencing motherhood challenges.

Huckletree is built on the motto that "No Mind is an Island." We believe you can't change the world alone, which is why we're on a mission to help the most innovative companies, from startups right the way through to MNE, take leaps and do braver work together.

We're more committed than ever to creating the space and environment for teams to work, grow their ventures, collaborate and pioneer whatever comes next. Our Futures Hub in Huckletree White City is home to some of the UK's leading Future Living companies.

The campus, located within the iconic White City Place development, is part of a bold new chapter in the rich creative history of a neighbourhood that sits at the centre of West London—an area already brimming with high-growth Future Living companies. It's a dedicated haven for startups and global brands paving our future way of life—how we sleep, think, move, parent, and learn.

We hope this report is both engaging and informative, and we're delighted that it's landed in your hands.

# Summary of the Future Living sector

Future Living companies sit at the intersection of technology with a range of sectors including educational services, childcare, pets and pet food, diet and lifestyle, and physical and mental wellbeing. Many of these companies also represent emerging industries that are connected to everyday life, such as eHealth, EdTech or the Internet of Things.

The Future Living cohort covers a lifetime total of 2,118 high-growth companies, where 1,611 are still active in the ecosystem, 128 have exited through acquisition or IPO, and 329 have ceased operations. Between 2011 and 2020, £4.8b of equity investment was raised by these companies over a total of 3,627 funding rounds.

With 131 spinouts from institutions of higher education, academic excellence is well-represented. Many of these spinout companies are innovators of technology for clinical diagnostics and medical treatment, eHealth and management of healthcare data, and information or teaching software that supports the work of doctors and clinicians. The Future Living industry has also received £246m in grant funding, which has not only gone into the aforementioned health and medicine technologies, but also to areas such as learning platforms for working professionals, parenting devices connected to mobile apps, and cybersecurity services.

## Future Living companies

eHealth firms are well represented among the Future Living companies. Video consultation app babylon has raised more equity investment than any other digital health company for a total of £518m. It reached unicorn status in 2019 and listed on the NYSE via a SPAC in October 2021. Another eHealth startup that has been successful at raising capital is Cera, which allows users to book carers online. It has secured £75m in equity investment.

Outside of healthcare, Future Living companies are creating innovative technology to improve customers' lives. Internet of Things business Elvie offers wearables for women such as an electric breast pump and a pelvic floor trainer. Insuretech unicorn Bought By Many brings a data-driven and digital approach to pet insurance.

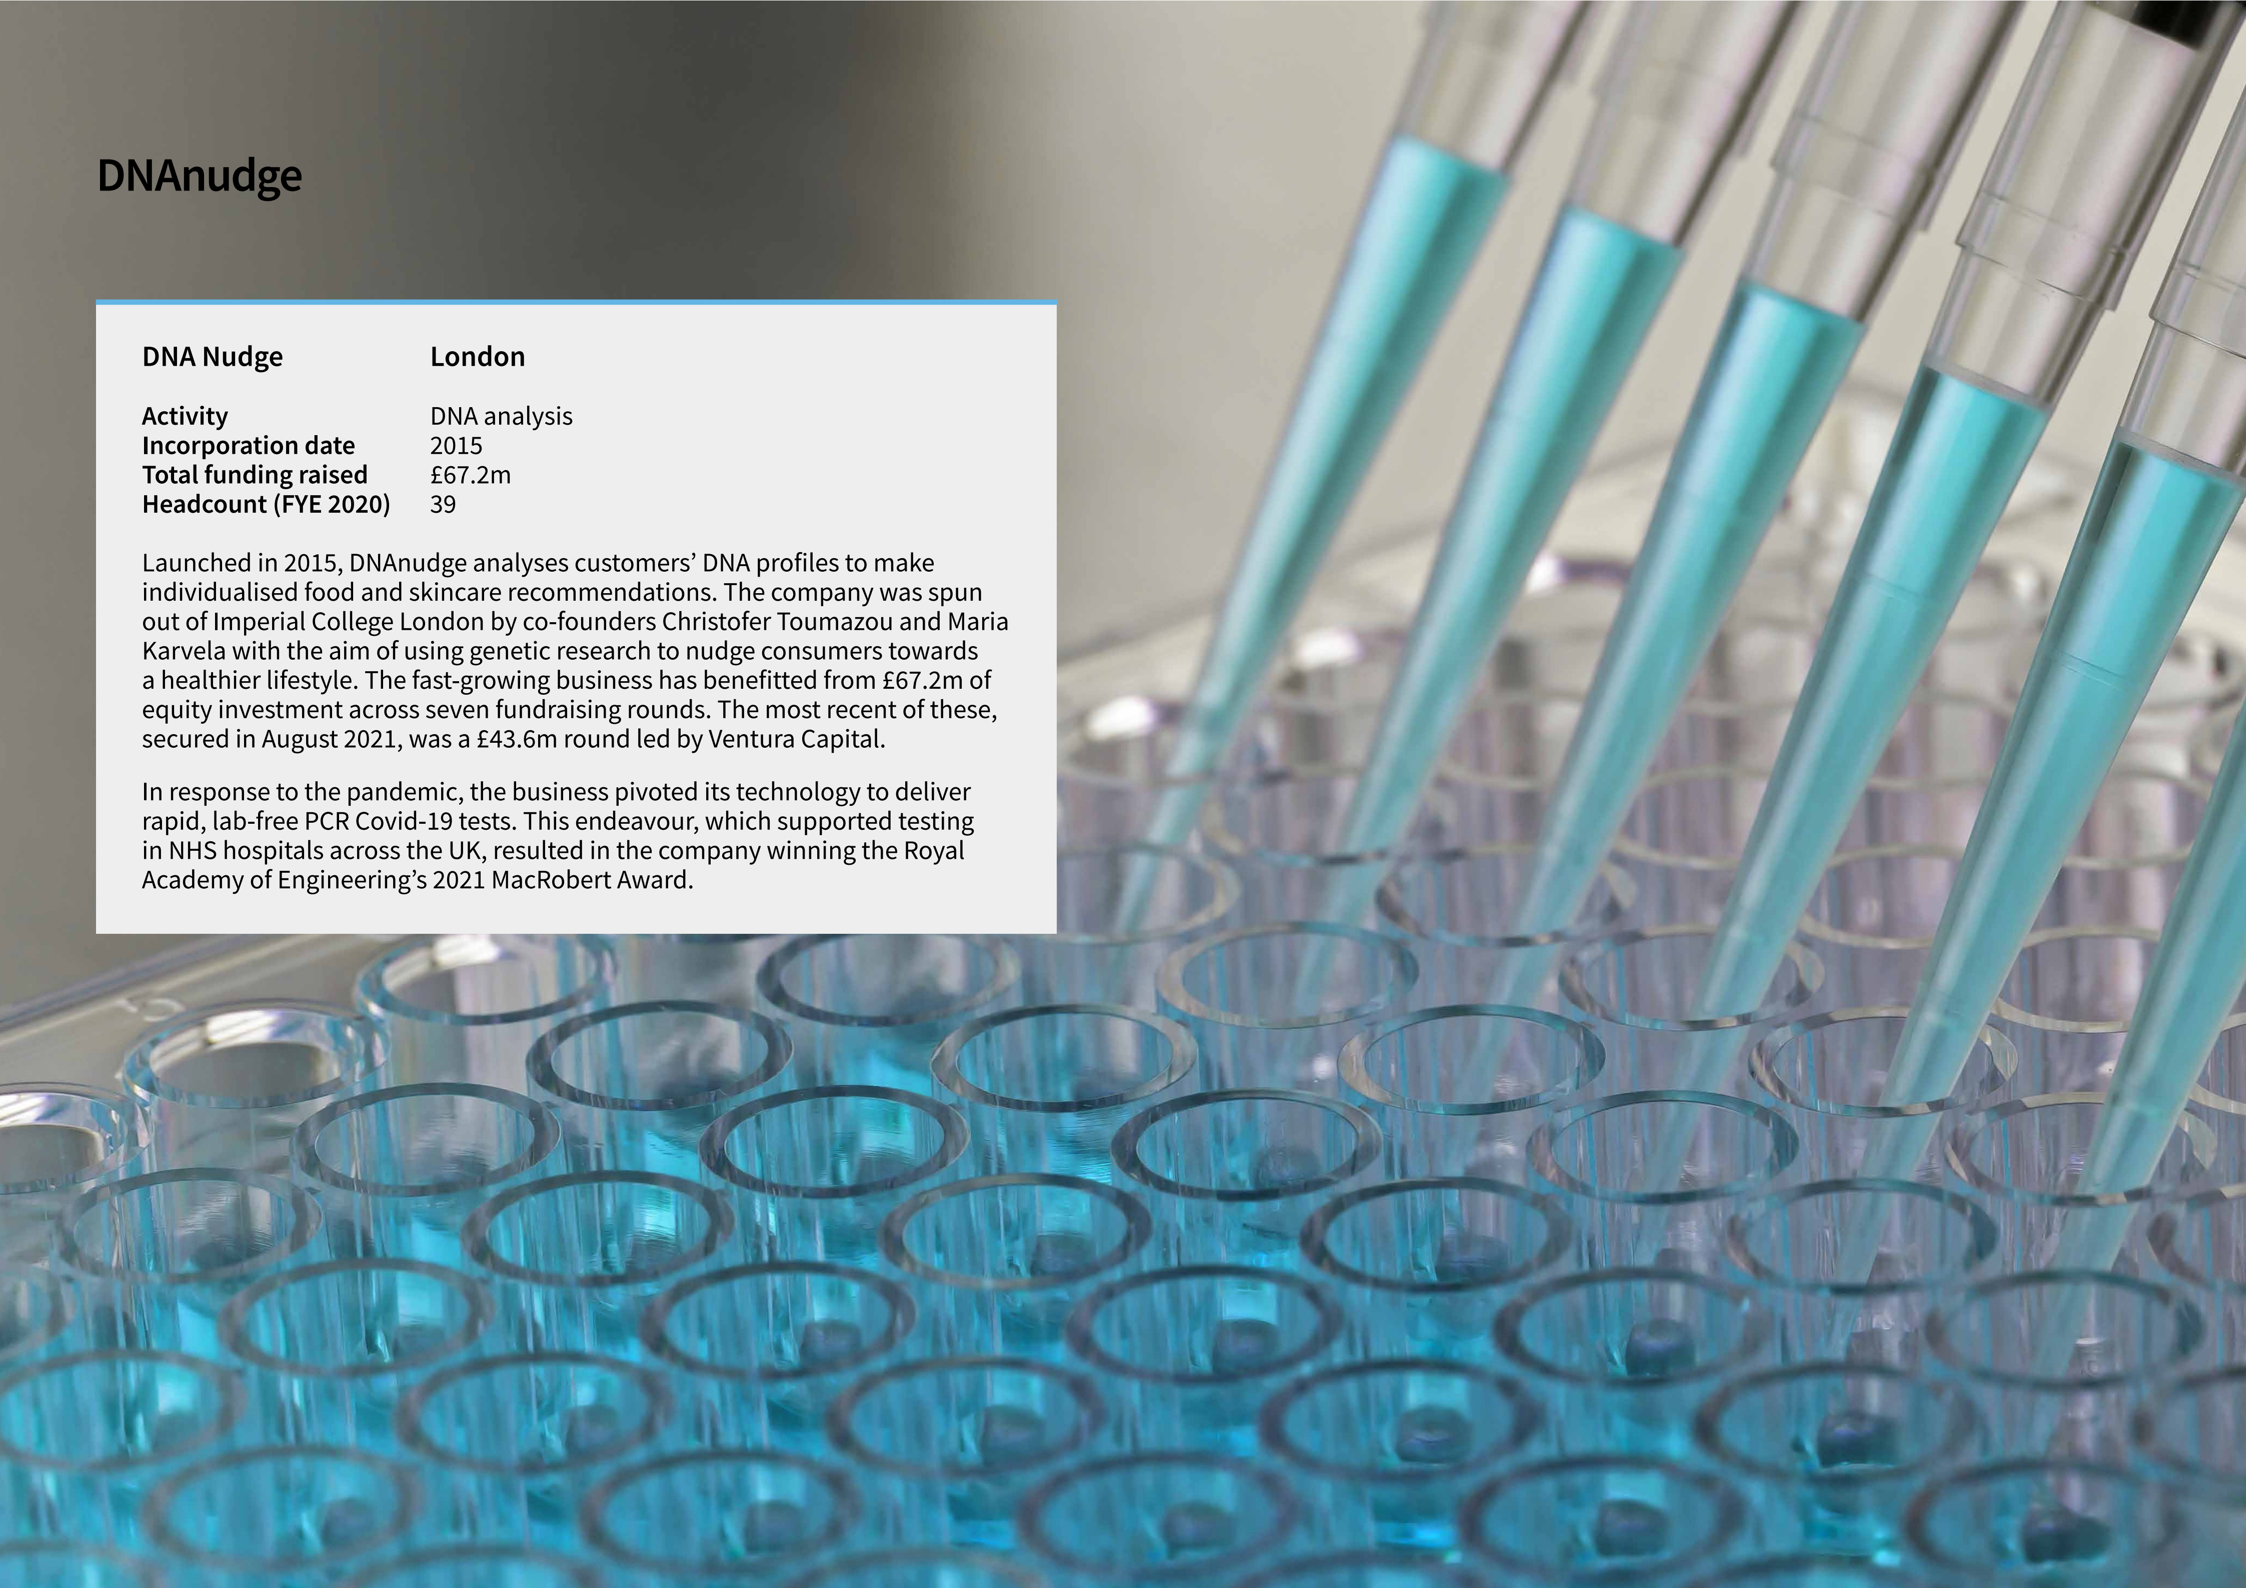
Another unicorn, SumUp, provides a payment processing system for small businesses. The scaleup has secured £961m of equity and debt.

# DNAnudge

| **DNA Nudge** | **London** |
|---|---|
| **Activity** | DNA analysis |
| **Incorporation date** | 2015 |
| **Total funding raised** | £67.2m |
| **Headcount (FYE 2020)** | 39 |

Launched in 2015, DNAnudge analyses customers' DNA profiles to make individualised food and skincare recommendations. The company was spun out of Imperial College London by co-founders Christofer Toumazou and Maria Karvela with the aim of using genetic research to nudge consumers towards a healthier lifestyle. The fast-growing business has benefitted from £67.2m of equity investment across seven fundraising rounds. The most recent of these, secured in August 2021, was a £43.6m round led by Ventura Capital.

In response to the pandemic, the business pivoted its technology to deliver rapid, lab-free PCR Covid-19 tests. This endeavour, which supported testing in NHS hospitals across the UK, resulted in the company winning the Royal Academy of Engineering's 2021 MacRobert Award.

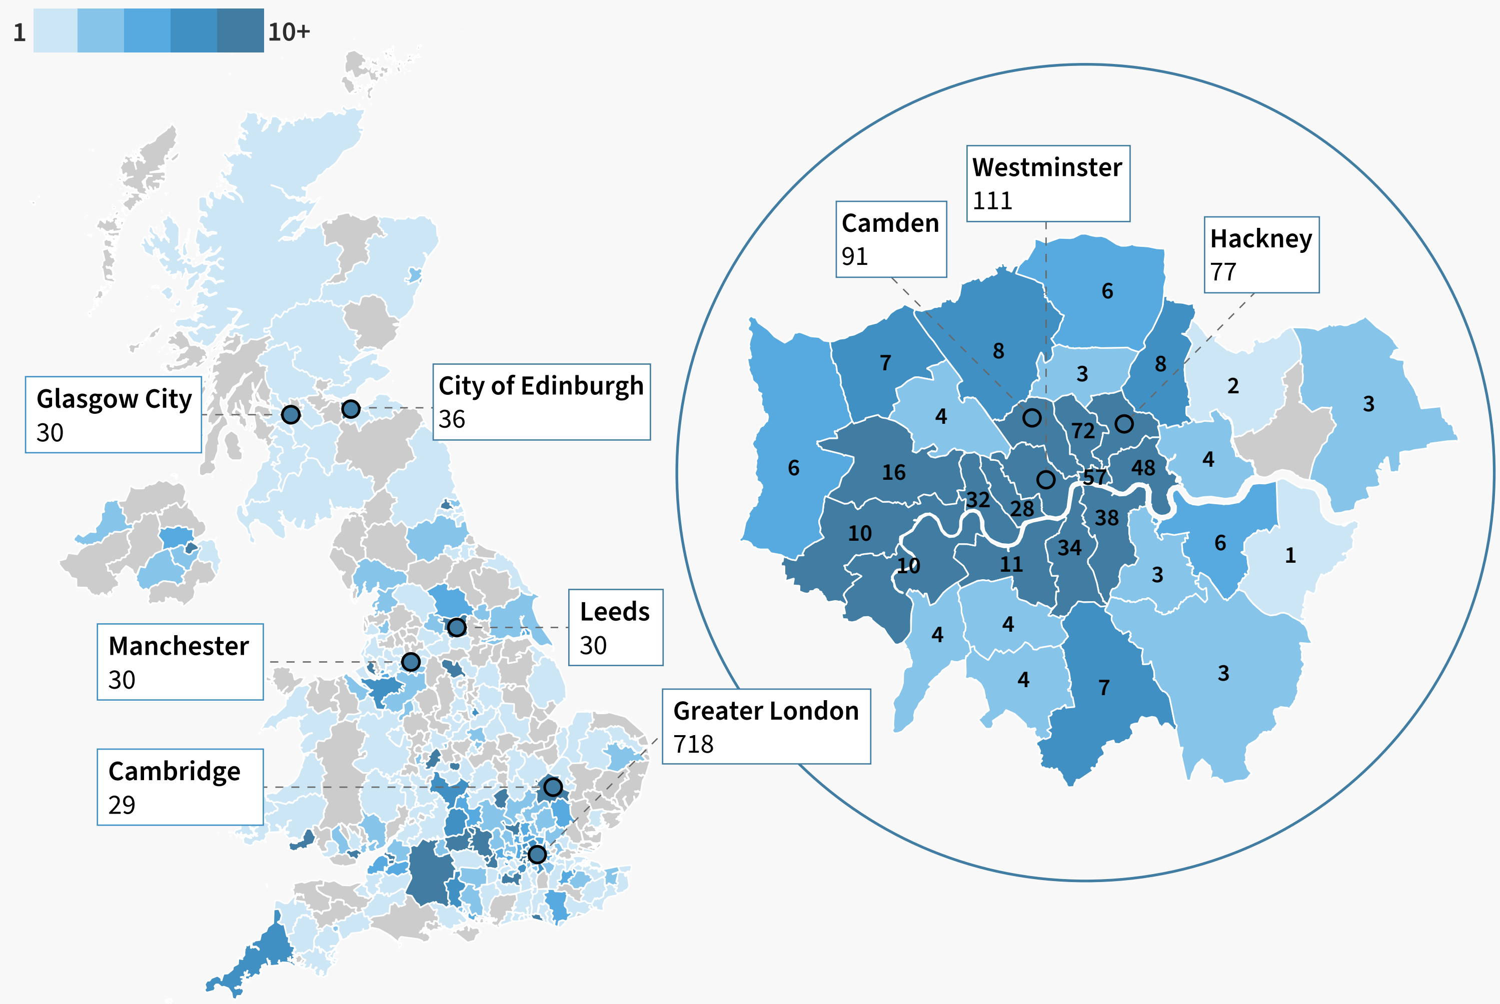


# Future Living map of the UK

From eHealth to EdTech, London has by far the highest concentration of fast-growth companies innovating the sectors under the Future Living umbrella. This is hardly surprising, as the city is a top centre for tech startups not only for the UK, but for companies across Europe. For the quickly growing companies innovating health, education and family life with a range of innovative technologies, London can offer access to capital, a large talent pool, accelerators and incubators, and a network of other entrepreneurs. Among the top 10 local authorities by number of Future Living companies, only one —the City of Edinburgh—is located outside of London.

While London is the most populated location, there are ambitious Future Living companies emerging all over the country. One source of these are the UK's universities, which produce academic spinout companies as a means to commercialise research. The Future Living cohort has a lifetime total of 131 spinouts, with 104 still active in the high-growth space having not exited or ceased operations. Headquartered in a range of cities including Glasgow, Oxford, Cambridge, Edinburgh and Birmingham, 80% of these 104 spinouts are not London-based.

*Number of high-growth Future Living companies in the UK by local authority area (2021)*



# Industry deep-dive: HealthTech

A rapidly developing industry in the technology sector is HealthTech, which refers to the use of information and communication technology in healthcare. HealthTech has a huge role to play in improving the prevention, diagnosis, monitoring and treatment of different health conditions. Among other products, innovators in the space have developed health admin software, AI-powered diagnostics, wearable medical devices linked to apps, and online platforms to track and advise on health concerns.

Investment into HealthTech has been firmly on the rise in recent years, even before the COVID-19 pandemic increased attention around the industry. One of the biggest HealthTech firms by equity raised is babylon—its 2019 round alone was worth £454m. In October 2021, babylon listed on the NYSE via a SPAC. Another key source of funding for HealthTech innovators is grant funding. London-based Oxford Heartbeat, a developer of surgery planning and visualisation software, has received nine grants totalling £2.78m from bodies including Innovate UK, the National Institute for Health Research, and the Royal Academy of Engineering's Enterprise Hub. The seed-stage business is yet to raise equity.

**425**
active high-growth HealthTech companies

**£314m**
value of equity investment in 2020

**184**
number of equity deals in 2020

ABTRACE

TYMPAHEALTH

### Analytics software for diagnostics

Informed healthcare workers can make better decisions; one way this can be achieved is through analytics for diagnostics. Abtrace has developed artificial intelligence (AI) technology that can find patterns in health records and assist clinicians with diagnoses. It has received £1.1m of equity funding in addition to grants worth £2.86m. Also operating in the health analytics space is Imperial College London spinout Tympa Health, producer of a hearing assessment system that shares data with specialists around the world in a digitised record. Tympa Health currently has an AI for diagnosis in development, and has secured £3.29m of equity investment.

HUMA

dnanudge

### Mobile apps and wearables

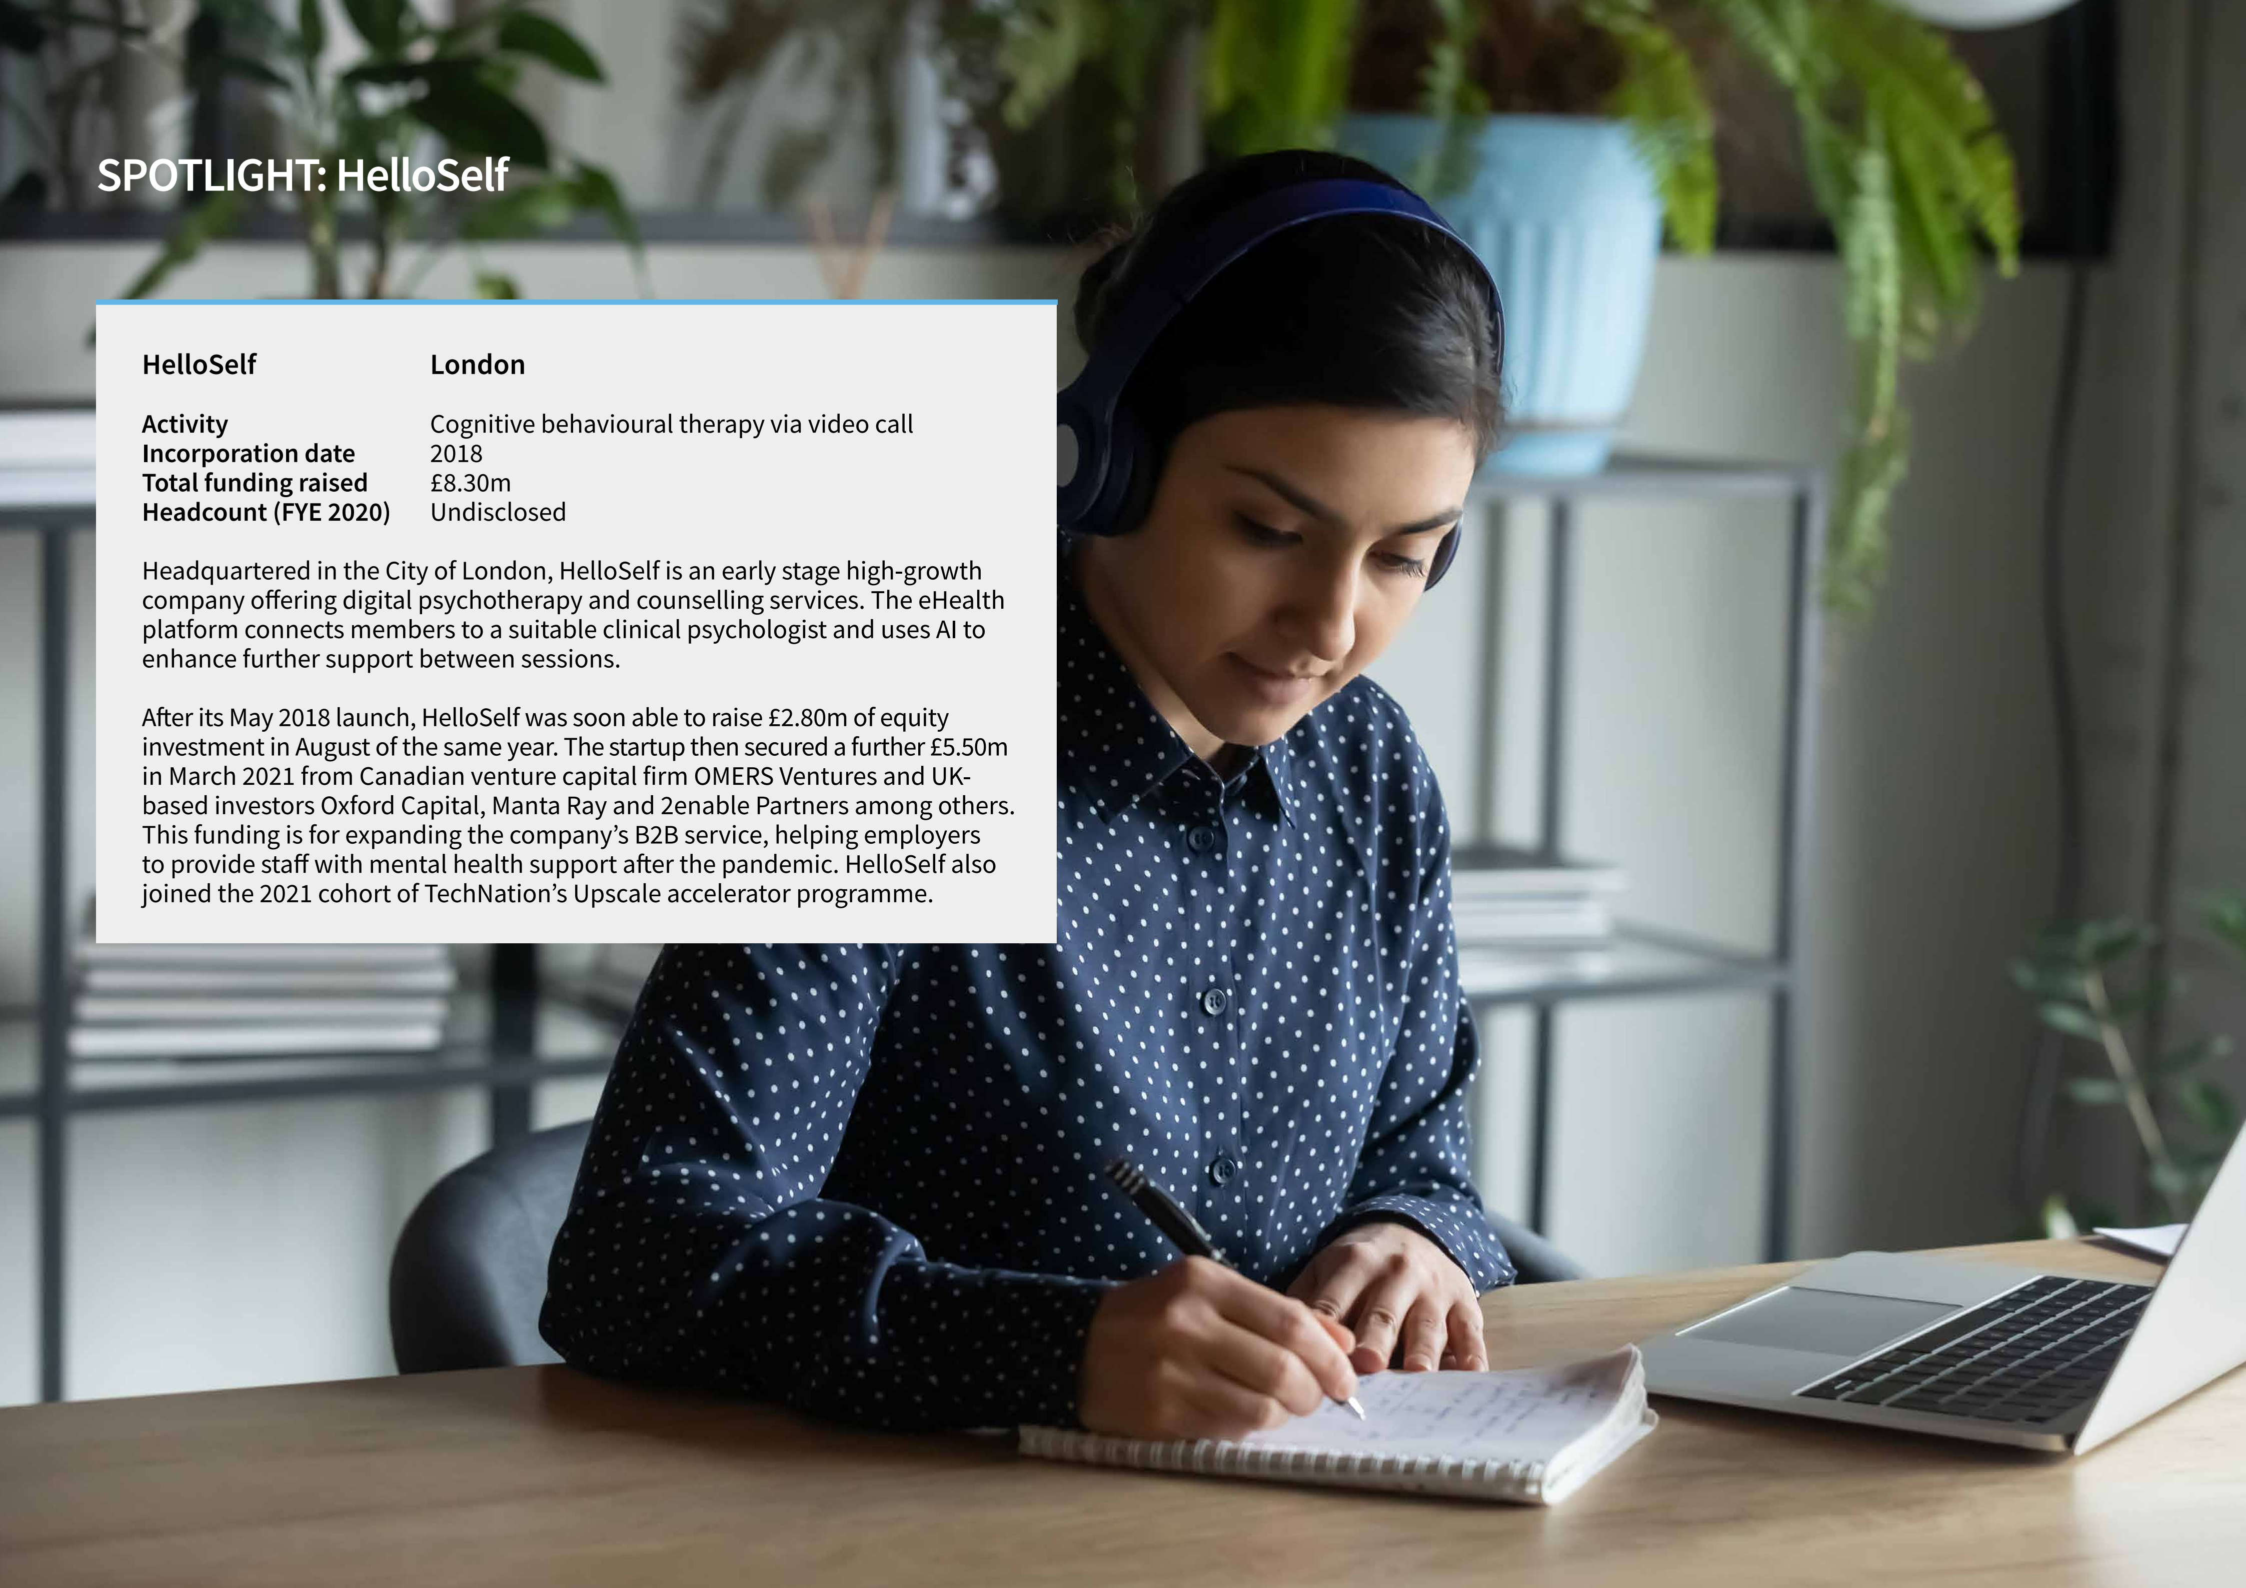
The ubiquity of smartphones and their effectiveness at capturing data make them valuable tools for managing health. Westminster-based Huma uses real-time health data from smartphones to help clinical teams manage patient care and run clinical trials. Huma has raised £121m, including a £64.1m round in May 2021. Another company making use of smartphones and connected devices is London's DNAnudge, an Imperial College London spinout. Its connected bracelet helps users select healthier food choices while they shop based on their DNA. It has raised £67.2m via seven rounds of equity investment.

lumeon

Healios
Families feeling better

### Software-as-a-Service (SaaS)

SaaS companies have disrupted almost every industry, including healthcare. Lambeth-based Lumeon has developed software to help track the progress of patients and stay on top of admin, reducing costs and improving efficiency. In August 2020, Lumeon raised £23.8m to help expand its reach. Another SaaS business helping improve patient outcomes is Healios, which joined TechNation's Upscale accelerator in October 2021 and has to date has raised equity investment worth £11.1m. Its online platform helps children and young people to access support for managing their mental health, autism and ADHD.



## SPOTLIGHT: HelloSelf

| | |
|---|---|
| **HelloSelf** | **London** |
| **Activity** | Cognitive behavioural therapy via video call |
| **Incorporation date** | 2018 |
| **Total funding raised** | £8.30m |
| **Headcount (FYE 2020)** | Undisclosed |

Headquartered in the City of London, HelloSelf is an early stage high-growth company offering digital psychotherapy and counselling services. The eHealth platform connects members to a suitable clinical psychologist and uses AI to enhance further support between sessions.

After its May 2018 launch, HelloSelf was soon able to raise £2.80m of equity investment in August of the same year. The startup then secured a further £5.50m in March 2021 from Canadian venture capital firm OMERS Ventures and UK-based investors Oxford Capital, Manta Ray and 2enable Partners among others. This funding is for expanding the company's B2B service, helping employers to provide staff with mental health support after the pandemic. HelloSelf also joined the 2021 cohort of TechNation's Upscale accelerator programme.

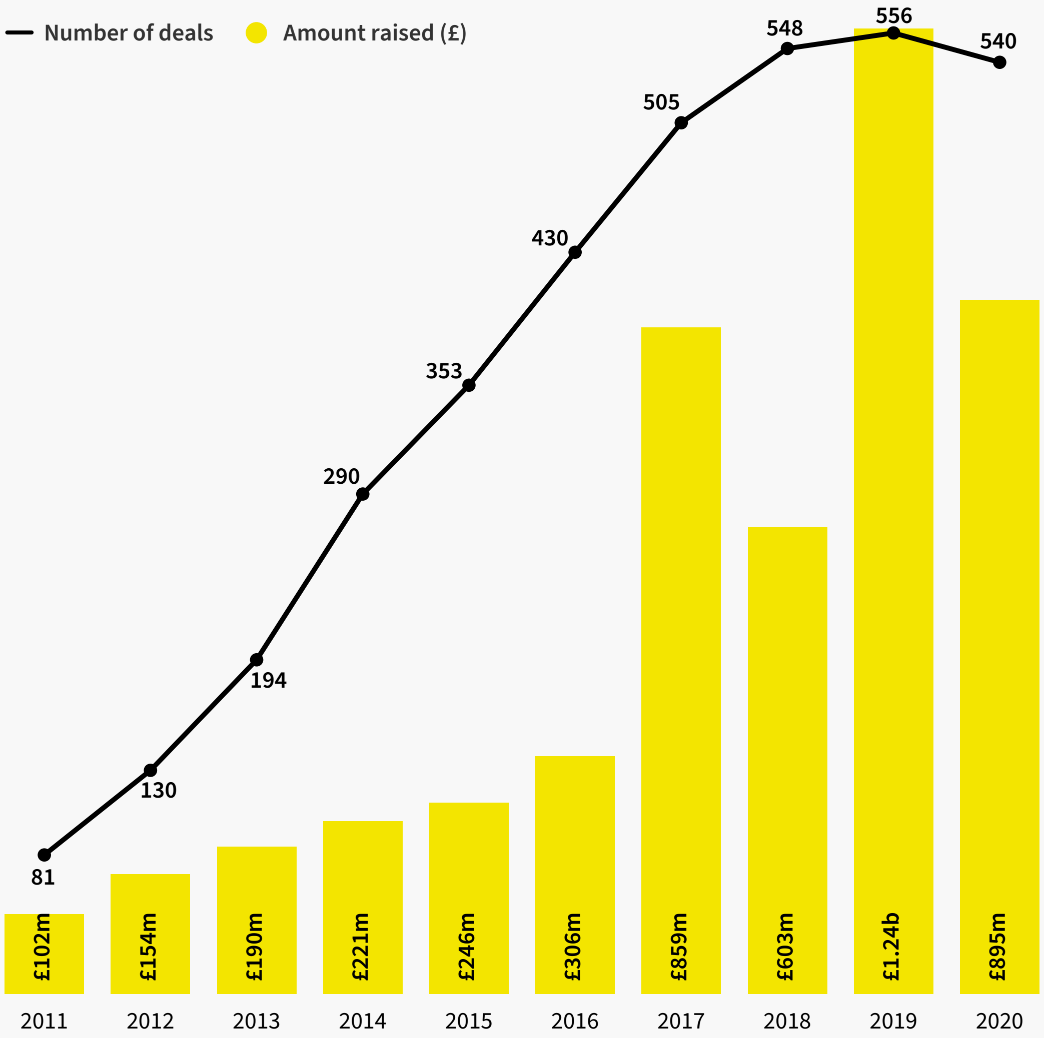
# Investment trends

The number of equity rounds being secured by high-growth companies in the Future Living cohort has been on a healthy upward trajectory from 2011 to 2019, peaking at 556 deals. Although 2020 was the first year in a decade with fewer deals than the previous year, this could be attributed to pandemic-related uncertainty and consequently more caution exercised by investors. Therefore, it can be expected that 2021 will be another healthy year for investment in the Future Living ecosystem as equity funding bounces back.

The 3,627 equity deals secured between 2011 and 2020 have a combined value of nearly £5b. While it may appear that funding rounds in 2018 were worth less on average, in actuality 2017 and 2019 both simply saw some colossal deals skewing their comparative average. Truphone raised £255m in 2017, while babylon secured £46.8m in 2017 and £454m in 2019.

London is certainly a hub for talented Future Living startups to grow; the city is home to 43% of active high-growth Future Living companies, yet these companies received 70% of the £4.8b of investment. Even if equity secured by babylon and Truphone is removed, London still claims around 60%.

*Equity investment into UK Future Living companies (2011–2020)*



**3,627**
rounds of equity investment 2011–2020

**£4.8b**
total equity investment raised 2011–2020

# Industry deep-dive: EdTech

EdTech is the use of technology for innovating education and learning processes. With more than 500 EdTech companies currently operating in the UK's high-growth ecosystem and over half still in the seed stage of growth, it is certainly an industry to watch. Equity investment in UK EdTech has been more than £100m each year since 2017, and 52 EdTech companies have exited the ecosystem either by acquisition or IPO. Based in London and founded by two surgeons, Touch Surgery is an interactive surgical simulator allowing trainees to learn procedures and rehearse for surgery. The company was acquired by US-based medical device firm Medtronic in 2020.

Three themes repeatedly emerging in the EdTech scene are gamification, virtual reality and Artificial Intelligence, with a large amount of overlap between them. High-growth workplace training company Virti operates across all three—learners are immersed in customised virtual environments featuring AI-powered characters, with gamification helping them to learn faster and remember training for longer. Further London-headquartered EdTechs in gamification, virtual reality and Artificial Intelligence have been explored in this industry deep-dive.

**504**
active high-growth EdTech companies

**£115m**
value of equity investment in 2020

**143**
number of equity deals in 2020

### Gamification

Gamification refers to the adding of gaming dynamics and principles to non-game environments to increase participation; it is used by some EdTechs to improve user engagement and learning. Founded in 2012, Hopster is an app offering educational games and TV shows for young children and has secured £16.5m of equity investment. Investors have also shown interest in EdTech for adults; Memrise has raised three equity rounds totalling £15.4m for its language-learning platform which focuses on fun over traditional textbook study. Memrise incorporated in 2010 and is a 2018 attendee of the Future Fifty accelerator programme.

### Virtual reality

With applications in entertainment and business as well as education, virtual reality is a three-dimensional simulated experience. MEL Chemistry is a subscription service of chemistry experiment kits for children including a virtual reality component. The venture has raised £19m of equity investment, including a £10.5m round in 2020. Also operating in the virtual reality space is Immerse, an EdTech backed by 11 equity deals since 2010 with a combined value of £10.8m. Immerse offers virtual reality training to businesses for upskilling employees in a range of scenarios such as safely loading cargo in warehouses or practising use of healthcare machinery.

### Artificial Intelligence

Describing the ability of computers to intelligently perform tasks, Artificial Intelligence (AI) is increasingly appearing in a variety of industries. Combining AI with learning science and neuroscience, CENTURY has developed a platform that can personalise learning for users. The quickly growing business has received equity worth £14.1m in addition to a £250k Innovate UK grant for its innovation in the field of adaptive learning. Also powered by AI is specialist reading technology developer Auris Tech, which uses speech recognition to improve literacy skills. Launched in 2015, Auris Tech has secured £1.73m of equity funding.

# Top investors

As with many emerging industries populated by large numbers of early-stage companies, the most common route for investment was crowdfunding, with 90 funding rounds taken through Crowdcube and 62 through Seedrs. University of Cambridge spinout Skin Analytics raised one of its early funding rounds, £512k in 2015, via Crowdcube.

Funds managed by Scottish Enterprise took part in 81 deals with a value of £82m. Funding was taken by EdTech companies including Glasgow-based Twig World and Edinburgh-located Administrate, as well as eHealth and medical wearables business Current, also launched in the Scottish capital. Such companies represent smaller Future Living hubs outside London.

Examining funds by the total value of the deals in which they were involved, the top four are overseas backers of health giant babylon, whose biggest round worth £454m elevated it to unicorn status in 2019. British VC firm Octopus Ventures places fifth, having participated in 17 equity deals worth £184m with companies including Bought by Many, Elvie, VivoSight, Quit Genius and BridgeU.

*Top investors ranked by number of rounds of equity investment into UK Future Living companies (2011–2020)*

| | |
|---|---|
| Crowdcube | 90 |
| Scottish Enterprise | 81 |
| Seedrs | 62 |
| SyndicateRoom | 27 |
| Entrepreneur First | 26 |
| Cambridge Angels | 26 |
| Archangels | 23 |
| Start Up and Early Stage Capital | 20 |
| Minerva Business Angel Network | 20 |
| Mercia Fund Managers | 18 |
| Bethnal Green Ventures | 18 |

| London Business Angels | 15 |
| IP Group | 15 |
| Nesta Impact Investments | 14 |
| Ascension | 14 |
| Accelerated Digital Ventures | 14 |

*Top investors ranked by total value of equity investment into UK Future Living companies (2011–2020)*

| | |
|---|---|
| Vostok New Ventures | £510m |
| Kinnevik | £500m |
| Public Investment Fund (PIF) | £454m |
| Munich Re’s Ergo Fund | £454m |
| Octopus Ventures | £184m |
| Lloyds Development Capital (LDC) | £116m |
| Munich Re/HSB Ventures | £101m |
| North American and European Flexible Capital Fund | £100m |
| CommerzVentures | £93m |
| Scottish Enterprise | £82m |
| FTV Capital | £78m |
| Draper Esprit | £78m |
| Guinness Asset Management | £77m |
| Accelerated Digital Ventures | £75m |
| Atomico | £66m |
| Yabeo | £66m |
| Kairos Ventures | £66m |

Where funds co-invested with other funds, the total value of the equity deal is counted rather than the individual contribution of the fund, as this information is largely undisclosed.

# SPOTLIGHT: Katkin

| **KatKin** | **London** |
|---|---|
| **Activity** | High-quality cat food subscription service |
| **Incorporation date** | 2019 |
| **Total funding raised** | £5.25m |
| **Headcount (FYE 2020)** | 10 |

KatKin was launched by siblings Brett and Nikki O'Farrell and offers healthy and nutritious food for cats using fresh and premium ingredients. The meals are all made in KatKin's in-house human-grade kitchen in London and food plans can be tailored for every cat. Aiming to be both accessible and affordable, KatKin's meals are available via subscription with prices starting from £1.75 a day.

The company first secured equity funding worth £750k in October 2019, just six months after launch. With a pre-money valuation of £9.13m, KatKin then raised £4.50m in 2020 in a round led by Octopus Ventures. The quickly growing business was also featured on the 2021 Startups 100 high-growth list.

# Industry deep-dive: ParentTech

ParentTech refers to technology designed to ease the challenges of parenthood. From tech-driven fertility clinics and baby monitoring wearables to platforms to share parenting experiences and services for finding childcare and family-friendly events, there are more than 150 high-growth ParentTech companies operating in the UK.

These businesses have secured over £350m of investment and this is only the beginning of the industry—more than £270m of this total was raised since the start of 2018. ParentTech is notable as a technology sub-sector in that its high-growth companies are equally represented by female founders, with a number of the entrepreneurs of these businesses finding a need for innovation after their own experience of motherhood. Four areas of ParentTech are highlighted below—fertility; wellbeing and care; groups and activities; and childcare and safety—via some of London's most ambitious equity-raising startups.

### Fertility

A number of new companies are innovating products to support couples trying to conceive. Apricity operates a virtual fertility clinic that combines AI fertility research and personalised human care to maximise chances of IVF success, raising £5.35m of equity from French fund Kamet Ventures. Founded by FemTech entrepreneur Tess Cosad, embryologist David O'Rourke and product developer George Thomas, Béa Fertility has secured £800k of equity investment and £279k of Innovate UK grant funding for its at-home fertility treatment kits before its launch to consumers in 2022.

### Wellbeing and care

To support the transition to parenthood, technology for the wellbeing of babies and parents is undergoing rapid innovation. Founded by Sophie and Ian Baron, seed-stage business Mamamade has raised £261k of equity funding to grow its organic and healthy baby food subscription service. Meanwhile FemTech firm Elvie, which attended Future Fifty and Upscale and has secured equity worth £108m, has gained traction with breastfeeding mothers, offering an electric breast pump that is silent, lightweight and discrete. Elvie has also appeared on 11 high-growth lists since 2017.

### Groups and activities

Parents want to meet other parents. Meeting this need is the Peanut app, a network for meeting women in a similar life stage such as pregnancy or motherhood, backed by £16.6m of investment. The popularity of the female-founded 'mum app' has also been made evident by Mush, which secured £3.18m of equity and attended the NHS Innovation Accelerator before being acquired by Mumsnet in 2021. ParentTech apps can also help to find child-friendly activities—Kinfo allows parents to share recommendations and reviews with other parents and has so far raised two seed-stage equity rounds.

### Childcare and safety

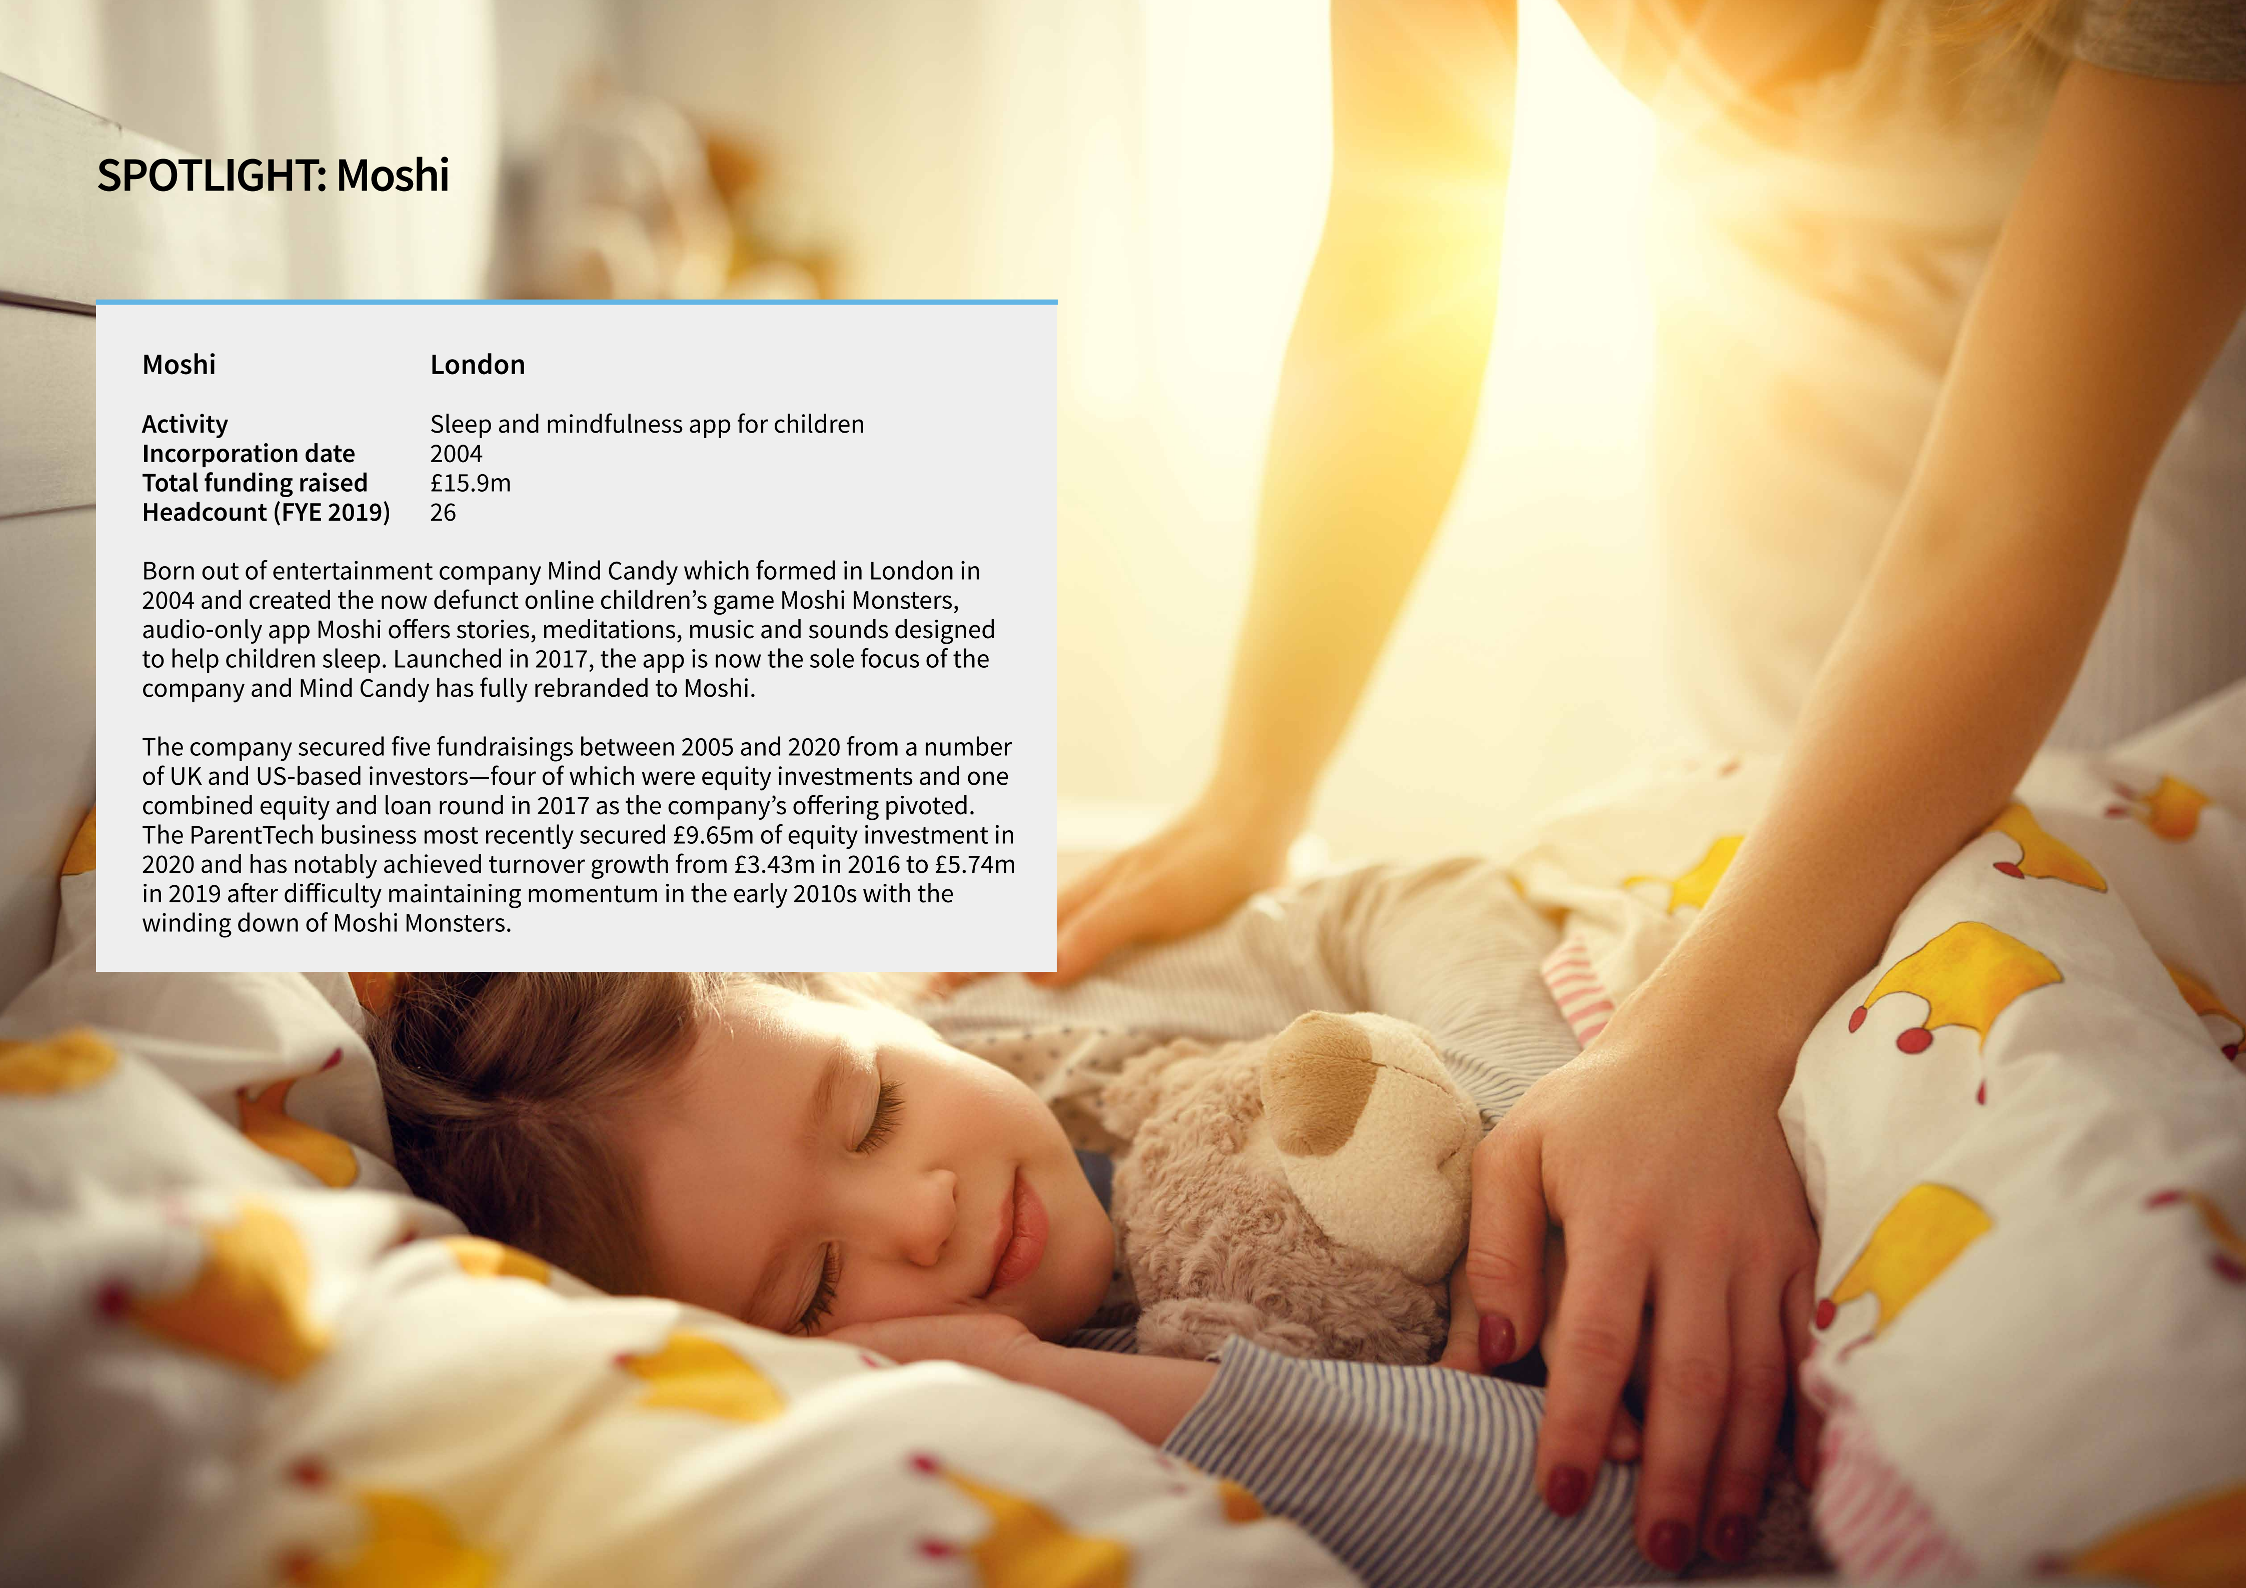
Helping to find childcare is a busy area for ParentTech innovators, with tiney, HiNanny, We Are Fetching, and KidSitter representing some of London's equity-backed childcare startups. Launched by Brett Wigdortz OBE, founder of Teach First, tiney is a B Corp that trains childminders to run high-quality childcare services out of their homes and connects them with parents needing the service, whilst managing payments and other admin. Child safety online is another major need in ParentTech. Fuelled by fundraisings with £239k, Kidslox allows parents to filter online content as well as set limits on screen time.

# SPOTLIGHT: Moshi

| **Moshi** | **London** |
|---|---|
| **Activity** | Sleep and mindfulness app for children |
| **Incorporation date** | 2004 |
| **Total funding raised** | £15.9m |
| **Headcount (FYE 2019)** | 26 |

Born out of entertainment company Mind Candy which formed in London in 2004 and created the now defunct online children's game Moshi Monsters, audio-only app Moshi offers stories, meditations, music and sounds designed to help children sleep. Launched in 2017, the app is now the sole focus of the company and Mind Candy has fully rebranded to Moshi.

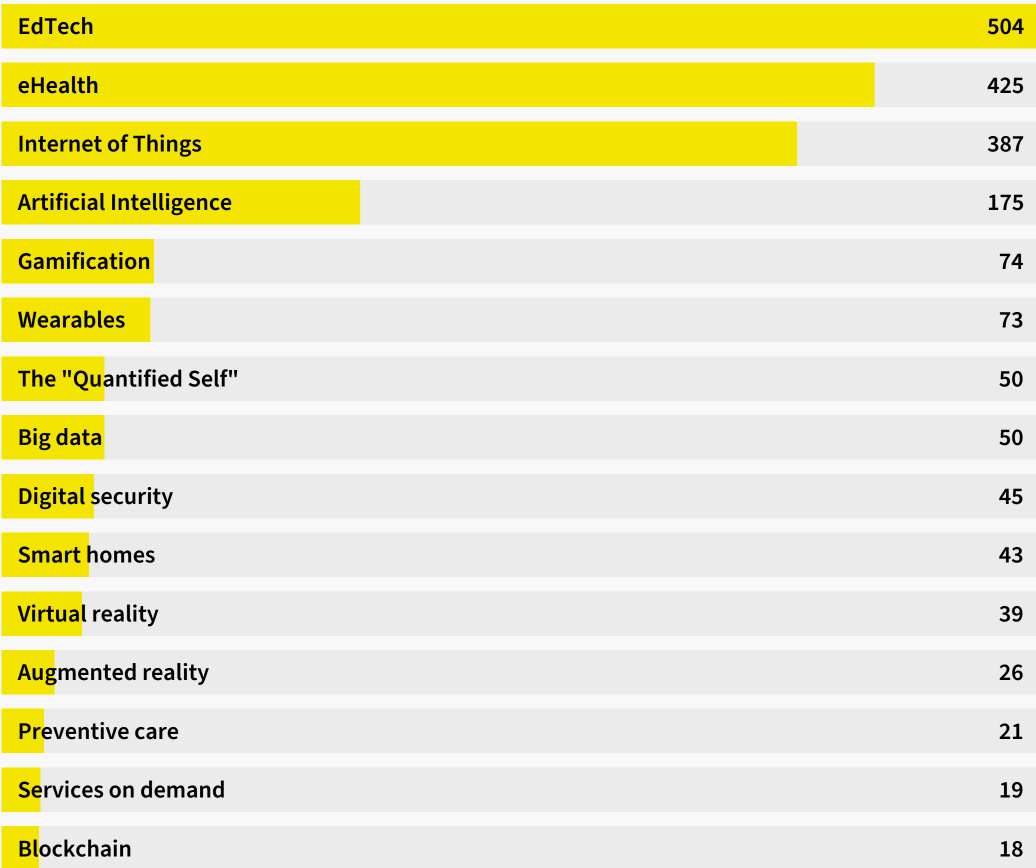
The company secured five fundraisings between 2005 and 2020 from a number of UK and US-based investors—four of which were equity investments and one combined equity and loan round in 2017 as the company's offering pivoted. The ParentTech business most recently secured £9.65m of equity investment in 2020 and has notably achieved turnover growth from £3.43m in 2016 to £5.74m in 2019 after difficulty maintaining momentum in the early 2010s with the winding down of Moshi Monsters.



# Emerging sectors and trends

Companies operating in the Future Living high-growth landscape are certainly marked by cutting-edge innovation and being part of the newest emerging sectors. EdTech, referring to the convergence of education and technology to improve teaching and learning, is the top emerging sector group. Fast-growth EdTech companies include Kano, which offers kits to teach children how to make computers and learn to code, as well as Kortext, which provides an online learning platform with access to digital textbooks. Other top emerging sectors are eHealth and the Internet of Things. eHealth describes the use of information and communication technology relating to healthcare services and systems, from patient records to wearable medical devices. The Internet of Things covers a broad range of physical devices connected to the internet and can thereby exchange data over it. These devices are not just traditional computers, but include smart appliances and digital assistants for the home, or sensors and monitoring equipment needed by industries from manufacturing and distribution to healthcare.

*Emerging sectors ranked by number of active high-growth UK Future Living companies (2021)*



**Sustainability and Future Living companies**

In 2019, the UK government passed legislation to end its contribution to global warming by 2050, meaning greenhouse gas emissions must become net zero. The road to net zero emissions will be paved by entrepreneurial innovation, and indeed many of the companies underpinning this report are working on technologies to support this mission.

Though vitally important, clean energy firms are not the only companies addressing climate change. High-growth Future Living startups are changing the way we eat, learn and live. EdTech, a sector which has grown hugely during the pandemic, is key for greener schools and universities. Not only does it make paperless learning possible, EdTech supports hybrid learning that massively cuts travel and campus emissions. Similarly, the eHealth industry reduces the energy consumption of information technology within healthcare, as well as can support the production of more eco-friendly medical devices.

The rise of the Internet of Things perhaps has one of the most significant roles to play. The World Economic Forum notes Internet of Things projects will be a key focus to meet the UN’s 2030 Sustainable Development Agenda, adopted by 194 countries. These devices can perform analytics in real time on issues such as energy efficiency and water use.
