

****Investment Memorandum: StoreDot****

****1. Executive Summary****

StoreDot is a pioneering company in the battery technology sector, focusing specifically on Extreme Fast Charging (XFC) solutions for electric vehicles (EVs). Founded by Doron Myersdorf, StoreDot is positioned as a leader in addressing the critical challenge of EV adoption?range anxiety?by drastically reducing charging times. With a technology maturity level at the production stage, StoreDot boasts significant traction, including strategic partnerships with major automotive players. The company has achieved several key milestones, such as demonstrating the capability to charge a vehicle from 10% to 80% in just ten minutes and producing scalable large-format cells. Despite the absence of detailed financial data and known funding stages, StoreDot's potential in the growing EV market is substantial.

****2. Market Opportunity and Sizing****

StoreDot addresses a significant market opportunity driven by the rapid adoption of battery electric vehicles (BEVs), which are projected to account for over 60% of new passenger vehicle sales by 2030 in key markets such as the US, EU, and China. The total addressable market (TAM) size is estimated at \$5,000M, with a serviceable available market (SAM) of \$1,500M and a serviceable obtainable market (SOM) of \$750M. StoreDot's technology directly addresses the foremost barrier to EV adoption?charging speed?positioning it to capture a significant share of this burgeoning market.

****3. Competitive Landscape****

While specific competitors are not listed, StoreDot maintains a competitive edge with a 3-5 years? lead on alternative solutions in extreme fast charging technology. The company's proprietary silicon-dominant anode technology and partnerships with global automotive manufacturers provide a robust moat. The competitive landscape is likely populated with both established battery manufacturers and emerging startups working on alternative fast-charging solutions. However, StoreDot's technology maturity and strategic alliances offer a substantial head start.

****4. Product/Service Description****

StoreDot's flagship product is its XFC battery technology designed to eliminate range anxiety by enabling rapid charging times. The '100in5' technology aims to deliver 100 miles of range with just five minutes of charging. This is achieved through a silicon-dominant anode, proprietary additives, and cell design that allow for high energy density and minimal degradation over 1000 cycles. The technology is scalable and can be integrated with existing lithium-ion manufacturing lines, making it a versatile solution for mass production. StoreDot's batteries also maintain consistent, reliable charging rates at any state of charge, setting a new standard for the industry.

****5. Business Model****

StoreDot operates on a B2B model, forming partnerships with leading automotive manufacturers and OEMs. The company aims to license its technology to these partners, allowing for integration into existing production lines, which enables a competitive cost structure. StoreDot's business model leverages strategic partnerships to scale production and drive adoption across the automotive industry.

****6. Team****

StoreDot is led by Doron Myersdorf, a seasoned entrepreneur with prior successful exits. The leadership team is bolstered by experts across various domains, including a strong R&D team where over 30% of employees hold PhDs. The cohesive leadership and advisory board bring together expertise in battery commercialization, automotive innovation, and future mobility, providing StoreDot with a strong foundation to execute its vision.

****7. Go-to-Market Strategy****

StoreDot's go-to-market strategy focuses on forming deep partnerships with leading global automotive manufacturers, as evidenced by its collaborations with companies like Polestar and Volvo. The company is working on joint development programs to ensure its technology meets OEM specifications and is adapted to different form factors. StoreDot's roadmap includes achieving mass production readiness by 2024 and scaling production through partnerships with existing manufacturing facilities.

****8. Main Risks****

The main risks for StoreDot include limited financial data and market information, as well as an unknown funding stage that could impact the company's ability to scale. Additionally, while StoreDot holds a technological lead, the rapidly evolving battery technology landscape presents the risk of emerging competitive solutions. Regulatory changes and the scalability of its technology to meet industry demands also pose potential challenges.

****9. What Can Go Massively Right****

If StoreDot successfully scales its technology and maintains its lead in extreme fast charging, it could revolutionize the EV market by significantly reducing charging times and eliminating range anxiety. This achievement could position StoreDot as a key supplier for global automotive manufacturers, driving widespread adoption of its technology and capturing a significant share of the rapidly growing BEV market.

****10. Tech Evaluation and Scores****

- Technology Maturity: Production-ready
- Moat Strength: 3-5 years lead on competition
- Founder Fit Score: 0.8

- Risk Score: N/A

StoreDot's technology is highly mature, with a strong competitive moat and a capable leadership team. However, the absence of a detailed risk score highlights the need for further financial and operational scrutiny.

****11. Follow-up Questions****

- What is the current funding stage and financial health of StoreDot?
- Can the technology be adapted to other markets or applications beyond EVs?
- What regulatory hurdles could impact the commercialization of StoreDot's technology?
- How does StoreDot plan to address potential competition from emerging battery technologies?
- What are the specific terms of existing partnerships with automotive manufacturers?
