Adobe adds new AI-powered image-editing features to Photoshop

Adobe is bringing more AI-powered image-editing and enhancement features to Photoshop using its Firefly models. The company said today that it is rolling out an image-upscaling feature, an object blending, and an upgraded object remover to Photoshop.

Harmonize

The company said that the Generative Upscale feature will enhance an image up to 8 megapixels. This is useful for restoring details to old photos, upscaling images for prints, or adopting assets for various platforms.

In 2024, Adobe teased a feature called [Project Perfect Blend](#), which works on correcting colors, shadows, and lighting for new objects being added to an existing image. The idea is to have the new object, such as a sofa chair in a room, blend in with the environment.

Now Adobe is rolling out this feature under the Harmonize moniker, letting you place an object in a scene, remove its background, and have Photoshop use Firefly models to adjust color, lighting, shadows, and visual tones to fit the object in the scene.

The company is also rolling out an improved object-removal tool. Previously, when you used generative fill to remove the object, the tool considered the whole scene to fill in the gap of the removed object and at times, that resulted in unwanted artifacts in the image. The company has reworked the algorithm to have it focus on just removing the object and filling the gap with the background.

In a demo seen by TechCrunch, when Adobe's director for product management at Photoshop, Joel Baer, used an earlier version of object removal to remove a small bowl of pico de gallo from a picture, the tool just added a green blob. The new version was able to successfully remove the object and replace it with the background.

Adobe is also adding a few small features to Photoshop, including a better way to manage putting assets in a shared and organized space. Plus, the company lets you choose the version of

the Firefly model you want to choose while using AI features.

“We have talked to photographers, designers, and content creators to understand what are the pain points in their workflows and what slows them down. These new features will help them save time, remove friction from their workflows, and take on some of the time-consuming tasks on their behalf,” Shambhavi Kadam, senior director of product management for Photoshop, said in a briefing.

The Generative Upscale, Harmonize, and improved object-removal features are available in beta for Photoshop on desktop and [web](#) versions. The Harmonize feature is also available on [the new Photoshop iOS app](#) through an early access program.

The Browser Company launches a \$20 monthly subscription for its AI-powered browser

Ivan Mehta — 11:26 PM PDT · August 6, 2025

The [Browser Company](#) has launched a Pro subscription plan for Dia, its new web browser that heavily integrates AI features. The plan costs \$20 per month and provides unlimited access to Dia's AI-powered chat and skills features.

The introduction of a paid tier means free users will now face usage limits on AI features. While The Browser Company hasn't specified exact limits, CEO Josh Miller told [The New York Times](#) in July that the browser will remain free for those who use AI features "a few times a week."

Miller also indicated that the startup plans to offer multiple subscription tiers, ranging from \$5 per month to hundreds of dollars monthly. The current \$20 plan appears to be one of several options based on different feature sets.

Earlier this week, users on [Reddit](#) and [Threads](#) noticed that The Browser Company had quietly made the Pro plan available online. However, the company quickly removed the page. Now the subscription option has been restored and can be accessed through Dia’s settings page.

The Browser Company, which previously made [the Arc browser](#), has raised [\\$128 million](#) from investors, including Pace Capital, Next Play Ventures, and notable tech execs like LinkedIn's Jeff Weiner, Medium's Ev Williams, Figma's Dylan Field, Notion's Akshay Kothari, and GitHub's Jason Warner. This Pro plan represents the company's first revenue-generating subscription service.

The startup faces growing competition when it comes to AI-enhanced browsers. Perplexity's [Comet browser](#) is gaining steam, Opera is also prepping its [Neon browser](#), and incumbents like [Google](#) and [Microsoft](#) are also integrating their AI assistants into their browsers.

Tinder explores a redesign, dating ‘modes,’ and college-specific features to boost engagement

Ivan Mehta — 6:40 AM PDT · August 6, 2025

Tinder is still struggling to generate revenue from its users, as it reported a 7% dip in paying users

while its parent company, Match Group, saw a 5% dip in Q2 2025 across all dating apps, including Tinder, Hinge, Match.com, and others.

Latest in Apps

See More

To boost engagement and push more people to pay for its product, the company has undertaken multiple new initiatives. During Match's second-

conversations based on those likes, similar to Match's dating app Hinge.

The changes arrive amid a mixed quarter for the dating app giant, which [reported](#) flat year-over-year revenue of \$864 million and earnings that declined from \$133.3 million year-over-year to \$122.5 million in Q2. However, the company provided a better-than-expected Q3 outlook with revenue reaching \$910-920 million, which boosted its stock post-earnings.

Match also announced it would invest \$50 million in product development, as the dating app maker aims to connect with younger Gen Z users and use AI to improve its products.

"We'll take the first steps towards a new UI refresh in Q3 with a cleaner, faster, and more modern look across the entire app," Rascoff said. "We're on

track to test version one of a redesigned ‘see who likes you’ tab this fall with the goal of helping users connect with people they’re more likely to be interested in, as well as to drive more revenue,” he added.

In the case of the latter, Tinder continues to experiment with [AI-powered matching](#), which it debuted in New Zealand earlier this year. The feature delivers curated matches based on information from your Tinder profile, answers to questions, and, optionally, insights from the user’s camera roll photos.

Now, the company intends to roll out this feature to more geographies.

“The interactive matching experience we’ve been testing in New Zealand is specifically designed to appeal to this type of audience [users under 30]: Somebody who doesn’t just want to be judged based on their physical appearance. [The feature is for] somebody who instead is willing to put in a little bit of time, answer some questions, and then get a custom result back,” Rascoff said.

Plus, Rascoff noted that Tinder is thinking about launching more college-specific features, including allowing users to just search within their college or other selected colleges, to appeal to younger users.

The company also offered an update on Tinder’s [Double Date option](#), launched in June, that lets users pair up with a friend to match with another couple. The dating company said it saw positive

results with 92% of users utilizing the feature being under 30.

IMAGE CREDITS: TINDER

This was Rascoff's first full quarter at the helm of Match Group, as the Zillow Group co-founder and Match board member was [appointed](#) CEO in February.

Earlier this year, the company announced that Faye Iosotaluno would step down from the app's CEO position in July, with Rascoff taking on the role. The company also laid off 13% of its staff (around 325 people) in May, and [closed open roles](#).

Photo-sharing app Locket is banking on a new celebrity-focused feature to fuel its growth

Lauren Forristal — 6:00 AM PDT · August 6, 2025

[Locket](#), the photo-sharing app that allows users to share images with friends that are then displayed on their home screens as widgets, wants to stay on your radar, and it's enlisting the help of celebrities.

When it launched in 2022, Locket emerged as a competitor to BeReal, offering a more authentic way to connect with others. The app places a widget on iPhone home screens that updates with the latest pictures added by friends. Users can select up to 20 close friends, creating an intimate

space to share unfiltered selfies and updates on their lives.

The app claims to have over 80 million total downloads and more than 9 million daily active users, and its users have shared more than 10 billion photos to date. Notably, the company also shared with TechCrunch that it achieved profitability in 2024, a significant accomplishment given its relatively modest fundraising efforts of just [\\$12.5 million](#).

To drive additional growth, Locket has been quietly testing a feature called “Celebrity Lockets” for the past six months, which the app officially announced on Wednesday.

Most Popular

- The uproar over Vogue's AI-generated ad isn't just about fashion
- Your public ChatGPT queries are getting indexed by Google and other search engines

Celebrity Lockets mostly focuses on music artists, letting them engage with fans by sharing details about upcoming shows, new album releases, and other news. Locket has already tested this feature with [Suki Waterhouse](#) and [JVKE](#), with more artists to be announced soon.

To use the feature, celebrities can share a link on their social media platforms, or fans can look them up in the app to add them, and they can then send photos directly to their fans' home screens.

“With posts going straight to fans' home screens, it offers the kind of immediacy and intimacy that other platforms can't replicate, turning passive followers into active participants,” founder Matt Moss told TechCrunch.

Locket allows artists to choose a number of fans to connect with, ranging from 1,000 to 15,000 slots. For instance, Suki has 5,000 fans on the app and

has helped Locket attract hundreds of new members. According to the company, 17% of these 5,000 fans were new to Locket.

“Fans feel special knowing they’re one of just a few thousand rather than just another follower. This also preserves the same intimacy and brand of Locket as a product today ... We knew our community used Locket to share music with their friends, so being able to also connect with their favorite artists is a natural evolution for the platform,” Moss said.

Although Moss says the feedback from testers has been good, it’s unclear whether this will help Locket grow its user numbers. BeReal tried something similar with a feature called “[RealPeople](#),” but the reception wasn’t entirely positive, with [some people](#) saying that they preferred the anti-social media app as a way to escape from celebrities.
