**TikTok adds YouTube
Music as an option to
save songs playing in
videos**

TikTok has been making it easier for users to save the songs they hear in video clips on the platform to their choice of music streaming platform. The short-video service today added YouTube Music as an option to this list.

The company first introduced this feature in [the U.S. and the U.K. with support for Spotify, Apple Music, and Amazon Music in November 2023](#). In February 2024, it rolled out this feature to [more than 160 countries across the globe](#). Over time, TikTok has added Deezer and SoundCloud as music streaming options as well.

IMAGE CREDITS:

Tesla shuts down Dojo, the AI training supercomputer that Musk said would be key to full self-driving

Rebecca Bellan — 3:19 PM PDT · August 7, 2025

IMAGE CREDITS: BRYCE DURBIN/TECHCRUNCH

Tesla is breaking up the team behind its [Dojo supercomputer](#), ending the automaker's play at developing in-house chips for driverless technology, according to [Bloomberg](#).

Dojo's lead, Peter Bannon, is leaving the company, and the remaining team members will be reassigned to other data center and compute projects within Tesla, per Bloomberg's reporting, which cited anonymous sources.

The disbanding of Tesla's Dojo efforts follows the departure of around 20 workers, who left the automaker to start their own [AI company called DensityAI](#). The new startup is reportedly coming out of stealth soon and is building chips, hardware, and software that will power data centers for AI that are used in robotics, by AI agents, and in automotive applications. DensityAI was founded by former Dojo head [Ganesh Venkataramanan](#) and ex-Tesla employees Bill Chang and Ben Floering.

It also comes at a crucial time for Tesla.

[CEO Elon Musk has pushed](#) to get shareholders to view Tesla as an AI and robotics company, despite a limited robotaxi launch in Austin this past June that featured Model Y vehicles with a human in the front passenger seat and resulted in a number of reported incidents of the vehicles exhibiting problematic driving behavior.

Tesla's decision to shut down Dojo, which Musk has been talking about since 2019, is a major shift in strategy. Musk has said that Dojo would be the cornerstone of Tesla's AI ambitions and its goal to reach full self-driving due to its ability to "process truly vast amounts of video data." He talked about Dojo, albeit briefly, as recently as the company's second-quarter earnings call.

In 2023, Morgan Stanley predicted Dojo could add \$500 billion to the company’s market value by unlocking new revenue streams in the form of robotaxis and software services. Just last year, Musk noted that Tesla’s AI team would “[double down](#)” on Dojo in the lead-up to [Tesla’s robotaxi reveal](#), which happened in October.

Tech and VC heavyweights join the Disrupt 2025 agenda

But talk about Dojo halted around August 2024, when Musk began touting Cortex instead, Tesla’s “giant new AI training supercluster being built at Tesla HQ in Austin to solve real-world AI.”

The Dojo project was one part supercomputer, one part in-house chip-making. Tesla unveiled its D1 chip when it formally announced Dojo at its first AI Day in 2021. [Venkataramanan](#) presented the chip, which Tesla said would be used alongside Nvidia’s GPU to power the Dojo supercomputer. The automaker also said it was working on a next-gen D2 chip that would solve any information flow bottlenecks of its predecessor.

Sources told Bloomberg that now Tesla plans to increase its reliance on Nvidia, as well as other external tech partners like AMD for compute and Samsung for chip manufacturing. Tesla last month signed a [\\$16.5 billion deal with Samsung](#) to make its AI6 inference chips, a chip design that promises to scale from powering FSD and Tesla's Optimus humanoid robots all the way to high-performance AI training in data centers.

During Tesla's second-quarter earnings call, Musk hinted at potential redundancies.

"Thinking about Dojo 3 and the AI6 inference chip, it seems like intuitively, we want to try to find convergence there, where it's basically the same chip," Musk said.

The news comes as [Tesla's board offers Musk a \\$29 billion pay package](#) to keep him at Tesla and help push the company's AI efforts forward, rather than getting too sidetracked by his other companies, including the more pure-play AI startup xAI.

How to use Instagram Map and set your location-sharing preferences

This week, Instagram introduced a new Snap Map-like feature called [Instagram Map](#) that lets U.S. users share their most recent active location with others and discover location-based content.

If you decide to turn on your location on Instagram Map, your location only updates when you open the app or have it running in the background, meaning it doesn't provide continuous, real-time location updates. This is different from Snap Map, which lets users choose whether their location is updated only when they open the app or in real time.

Meta says location sharing is off by default on Instagram Map. Following [concerns](#) around safety, [Instagram head Adam Mosseri](#) reassured users that the feature is opt-in, and noted that some people are “confused” about how the feature works.

For instance, people are accessing the feature and then seeing the map populated with the location information of some users. This is because the feature automatically pulls in location tags from recently posted Stories or Reels that include a tagged location.

To access the new feature, you need to navigate to your DMs page (direct messages) and tap the new “Map” option at the top. If it’s your first time accessing the feature, you’ll likely see a pop-up message notifying you about the new Map.

The pop-up will tell you that no one can see your location until you share it with them, and that you can change your settings at any time.

How to set your location-sharing preferences

 You are not sharing your location.

Who can see your location

If you share, your precise location updates every time you open Instagram. It disappears if you don't open the app for 24 hours. [Learn more](#)

-  **Friends**
Followers you follow back ☐
-  **Close Friends**
Choose people > ☐
-  **Only these friends**
Choose people > ☐
-  **No one**
Don't share location ☒

Done

IMAGE CREDITS: INSTAGRAM

The first time you open Map, you will see a page that reads “Who can see your location.” From there, you can choose to share it with your Friends (followers you follow back), your Close Friends list, select users, or no one.

To change your preferences, you need to click on your profile, tap the settings option in the top-right corner, select the “Story, live and location” option, and then tap the “Location sharing” button. Here, you will be able to change your settings.

Note that if you have location sharing turned off, others can still share their location with you, which

means you'll be able to see them on the Map.

How to use Instagram Map

When you open the app, you will see the locations of friends who have shared their location with you. You will also see location-based Stories and Reels from people you follow.

For example, if your friend attended a nearby music festival and posted a story while there, it will appear on the map. Similarly, if a creator you follow posts a reel about a new restaurant in your city, you'll be able to discover it on Instagram Map.

You will still see location-based content on the Map even if you have your location turned off.

You also can leave short, ephemeral messages, or "Notes," on the map for others to see. Instagram Notes are the short messages that currently appear at the top of your direct messaging feed, but with the launch of Instagram Map, you will now see these posts on the map if they're shared with a location.

AI agents aren't the 'new Google,' says Airbnb CEO

Sarah Perez — 8:37 AM PDT · August 7, 2025

IMAGE CREDITS: [GERALD MATZKA / STRINGER](#)
/ GETTY IMAGES

After a second-quarter earnings [beat](#), Airbnb CEO Brian Chesky shared his thoughts on the company's AI strategy, cautioning investors that AI chatbots can't yet be thought of as the "new Google." That is, AI chatbots, while potentially driving new leads to the travel and services business, aren't entirely a replacement for the referrals that the dominant search engine brings.

DISRUPT

October 27-29, 2025 | San Francisco

Put your brand in front of 10,000+ tech and VC leaders across all three days of Disrupt 2025. Amplify your reach, spark real connections, and lead the innovation charge. Secure your exhibit space before your competitor does.

At least not at this time.

“I think we’re still kind of feeling out the space,” the exec told investors on the Q2 earnings call. “The thing I want to caution is I don’t think that AI agents — I don’t think we should think of chatbots like Google — I don’t think we should think of them as the ‘new Google’ yet.”

This, Chesky explained, is because AI models aren’t “proprietary.”

“We also have to remember that the model powering ChatGPT is not proprietary. It’s not exclusive to ChatGPT. We — Airbnb — can also use the API, and there are other models that we can use,” he said.

Painting a broader picture of the AI landscape, Chesky said that in addition to chatbots and other AI agents, there will be custom-built startups designed for specific applications, as well as other incumbents that have made the shift to AI.

“One of the things we’ve noticed is it’s not enough to just have ... the best model. You have to be able to tune the model and build a custom interface for the right application. And I think that’s the key,” he said.

The company told investors it will look to take advantage of AI in a number of ways.

Airbnb shared during the call that its AI customer service agent in the U.S. reduced the percentage of guests contacting a human agent by 15%, for instance. This was actually harder than tackling the lower-hanging fruit involving travel planning and inspiration, Chesky said, because AI agents performing customer service can't hallucinate. They have to be accurate and helpful at all times.

Airbnb's customer service agent was built using 13 different models and trained on tens of thousands of conversations, and is currently available in English in the U.S. This year, Airbnb will roll it out to more languages, and next year, it will become more personalized and agentic. That means it would be able to understand if someone reaches out to cancel a reservation; not only would it be able to tell them how to do so, but it could also do it for them. The agent could also help plan and book trips.

Plus, AI will come to Airbnb's search next year, the CEO said.

However, the company has not fully fleshed out its plans for working with third-party AI agents, although it's considering it. Users still need an Airbnb account to make a booking.

Because of this, Chesky doesn't think agentic AI would turn its business into a commodity, the way that booking flights has become. Instead, he sees

AI as “potentially interesting lead generation” for the company.

“I think the key thing is going to be for us to lead and become the first place for people to book travel on Airbnb. As far as whether or not we integrate with AI agents, I think that’s something that we’re certainly open to,” he said.

Airbnb beat analysts’ expectations in the quarter with revenue of \$3.1 billion and earnings per share of \$1.03, but the stock [dropped](#) on its forecast of slower growth in the second half of the year.
