Denmark clamps down on deepfakes by letting people copyright their own features

The Danish government is working to change copyright law to give its citizens the right to their own body, facial features, and voice. The landmark law is designed to strengthen protections against the creation and dissemination of deepfakes, reports [The Guardian](#).

Denmark's department of culture still needs to submit a proposal to amend current law, but the agency has already secured cross-party support.

“In the bill we agree and are sending an unequivocal message that everybody has the right to their own body, their own voice and their own facial features, which is apparently not how the current law is protecting people against generative AI,” Jakob Engel-Schmidt, Danish culture minister, told The Guardian.

In the U.S., several states have passed deepfake laws, which are mainly tied to misuse during elections and nonconsensual sexually explicit content. Many of those laws are currently at risk as Congress weighs up a proposal in a new budget reconciliation bill that would strip states of their power to regulate AI for 10 years.
