Headline funding figures

As suspected, the UK private company ecosystem felt the effects of the global funding downturn, with only 542 deals announced in Q1 2023. That's a 14% decrease from Q4 2022 and a massive 37% drop from the same quarter last year. This marks the second instance of a decline in deal volume from Q4 to Q1 in the last decade, following the 7% decrease from Q4 2015 to Q1 2016.

The amount invested also took a hit, with only £2.38b deployed by investors in Q1 2023 — a 36% decrease from Q4 2022. And with [Q1 2022 being the top-performing quarter for equity investment in the UK on record](#), both in terms of the number of deals made (843) and the amount raised (£7.28b), it's not surprising that Q1 2023 saw a whopping 67% drop compared to the same quarter last year.

The last quarter marks the lowest Q1 performance since 2018 in terms of the amount of equity investment raised. However, deal numbers are not far off from Q1 2020. This quarter, the market has faced many challenges such as decreased consumer and business confidence due to inflation and associated interest rate rises. It begs the question: could we be seeing a return to normalcy in the wake of the extraordinary stimulus measures in response to the pandemic? Or has investor sentiment swung too far the other way in response to a more challenging macroeconomic environment? Ever the optimists, we are hopeful for the former.

Sectors

Fintech and cleantech both saw a decline in announced deals this quarter from Q4 2022. Fintech deals fell for a fourth consecutive quarter, falling 37% from Q4 2022, whilst cleantech deals fell by 8% in the same period. Artificial intelligence withstood the declining tech investment trend by maintaining the same number of deals from Q4 2022.

Amid supply challenges in the agricultural sector, agritech had a sizeable increase in deals of 83% from Q4 2022, and a 26% increase in equity investment received. The sector witnessed a record 11 deals in Q1 2023.

Blockchain companies continued to buck the investment trend. In 2022, the sector saw a slight (5%) uptick in deal volume from 2021. This upwards trajectory continued as blockchain deals increased by 56% (from 9 to 14) in Q1 2023 from Q4 2022. Though the amount raised from Q4 2022 to Q1 2023 has fallen by 18%. This is indicative of a growing appetite for the sector, set against a background of declining equity funding.

Regional trends

From a regional equality perspective, the distribution of equity funding in the UK has improved, though the Capital still secured the greatest proportion of announced equity deals. This quarter we saw 43% (230) of the deals go into London, down 10% from Q1 2022, and 7% from 2022 overall. The South of England received 68% of the total deals, down 4% from 2022. The South East received 13% of deals, the South West 5%, and the East of England 8%.

In comparison, the North of England (Yorkshire and The Humber, the North East and the North West) secured just 12% of deals, a proportion which is unchanged from 2022. And in keeping with previous quarters, Northern Ireland received the smallest share of equity rounds, at just 1%.

Deal numbers in Scotland remained steady at 6%, similar to Q1 2022. Meanwhile, Wales saw an uptake in deal volume, accounting for 24 (5%) of this quarter's deals. This is up from 2% in Q1 2022.

Looking at the amount invested, regional disparity once again is improving. The Capital received 61% of the total funds raised in Q1 2022, and 69% in 2022 overall. This quarter saw 56% (£1.28b) of the total pounds deployed to London-based companies.

While regional equality is a desirable outcome, there are likely a multitude of factors causing this shift such as the drawing back of international investors and the recent depreciating appeal of tech companies.

Investor types

Despite venture capital and private equity funds tightening the belt, this quarter saw a slight uptake (1%) in the number of deals made by these funds from Q4 2022. This was also the most active investor group in the UK’s private company ecosystem by total number of deals, with 241 rounds announced during the quarter.

All other major fund types had reduced or stagnated investment activity in Q4 2023. With deal volume falling by 45% from Q4 2022, crowdfunding saw the biggest decline. Angel investment saw the second largest fall from Q4
