Foodtech VC ecosystem market map

This market map is an overview of venture-backed or growth-stage companies that have received venture capital or other notable private investments.

[Click to view the latest interactive map on the PitchBook Platform.](#)

VC activity

VC funding starts slow

Foodtech VC activity slowed significantly in Q1, with \$1.4 billion invested across 202 deals—a quarter-over-quarter decline of 49.6% in capital and 15.1% in deal count. Investor caution remains elevated, with a marked shift toward more mature startups boasting proven business models. This has led to a sharp reduction in seed and early-stage funding. Notably, some investors have pulled back from foodtech—or from venture capital altogether. As illustrated in the “Count of unique VC investors that invested in foodtech target companies by close year” chart, the number of unique VC investors participating in foodtech VC deals dropped 54% from its 2021 peak through Q1 2024, while participating nontraditional investors declined 67%.

[PitchBook data reveals](#) that 71% of all venture capital deployed in Q1 went to AI & machine learning (ML) startups. Foodtech, by contrast, has seen fewer AI-native startups close major rounds. As capital increasingly gravitates toward AI, generalist investors may be overlooking attractive foodtech opportunities to get AI exposure. However, AI applications in restaurant management software, food intelligence & production, and supply chain traceability could reignite interest in the sector.

Despite the slowdown, notable deals demonstrate ongoing opportunities. Tapcheck, an earned wage access platform for restaurants and retailers, led the quarter with a \$250 million Series A through a combination of debt (\$200 million credit facility) and \$50 million in equity. Dorsia, a membership platform for exclusive restaurant reservations, raised a \$50.4 million Series A at a \$146 million valuation. Late-stage unicorns Augury and GrubMarket both closed rounds as they await exit opportunities. Importantly, these deals came without a valuation cut, bucking 2024’s trend of down rounds for maturing startups.

Count of unique VC investors that invested in foodtech target companies by close year

Source: PitchBook • Geography: Global • As of March 31, 2025

VC ACTIVITY

The current trends in foodtech VC funding have significant implications for both investors and startups. For investors, the sharp rise in median valuations signals a flight to quality, with capital being concentrated in fewer, more mature startups that can demonstrate proven business models and scalability. For example, the overall median pre-money valuation reached \$26.3 million in Q1 2025, which more than doubles that of 2021 during the COVID-19-era. This heightened selectivity means investors are likely to face less competition in early-stage deals but may need to pay a premium for access to high-potential later-stage companies. As deal sizes also increase, investors must conduct deeper due diligence to ensure these higher valuations are justified by strong fundamentals and clear paths to profitability.

For startups, the environment is increasingly challenging, especially at the early stage, where median valuations have dropped to \$6.1 million from \$12.1 million in 2021, reflecting tougher fundraising conditions and elevated expectations from investors. Startups must demonstrate not only innovation but also clear market traction, operational efficiency, and alignment with major trends such as sustainability, health, and supply chain resilience to stand out. Those able to meet these demands may benefit from larger check sizes and stronger investor support, while those unable to show near-term viability may struggle to secure funding or face pressure to accept lower valuations or alternative financing options such as venture debt. Overall, the market is rewarding quality and resilience, with both investors and startups needing to adapt to a more competitive and discerning funding landscape.

Alt-proteins remain resilient

Mature alt-protein companies faced significant challenges at the beginning of the year. Beyond Meat reported its third consecutive quarterly revenue decline, contributing to a \$1.1 million loss, and subsequently raised \$100 million in debt from a sustainable food nonprofit.¹ On the private market side, mycelium meat alternative producer Meati encountered severe financial challenges and lost much of its cash to technical default and selling its assets for just \$4 million,² despite having raised over \$500 million in VC funding and achieving retail success, selling in over 7,000 stores across the US.³

Despite these challenges, early-stage dealmaking in alt-proteins remains robust, particularly in fermentation. Liberation Labs and Vivici raised \$52 million and \$33.8 million early-stage rounds, respectively. Liberation Labs plans to operate as a contract manufacturer, producing food ingredients and industrial products. Vivici, a customer of Liberation Labs,⁴ develops fermented dairy proteins. Other notable deals included cultivated meat producer Aleph Farm's \$29 million Series C and plant-protein producer PROJECT EADEN's \$15.5 million Series A. The deals underscore sustained investor interest in both consumer brands and enabling infrastructure.

VC ACTIVITY

Functional foods stand out

Functional foods emerged as one the strongest near-term opportunities in foodtech amid the broader funding downturn. Growing consumer prioritization of wellness through diet and demand for health-enhancing everyday food products have fueled rapid growth in this segment.⁵ PepsiCo's \$1.7 billion acquisition of Poppi at a 3.3x revenue multiple underscores the sector's value and could spur further acquisitions as major brands look to expand their functional food portfolios.

Olipop, a Poppi competitor, raised \$137.9 million in a Series C1, achieving unicorn status with an estimated \$2 billion valuation—a 4.1x revenue multiple. Other notable rounds include Supergut's \$22 million Series B and hiyo's \$19 million Series A, both targeting the growing market for functional beverages and gut health.

Strategic M&A drives exit activity

Public market volatility kept the IPO window closed across Q1, leaving M&A as the primary exit route. We tracked 23 acquisitions of VC-backed foodtech companies in the quarter—not including the PepsiCo-Poppi deal, which is still in progress. Wonder made its fifth acquisition, purchasing Tastemade, a food-and-travel-focused media company. With past acquisitions including Blue Apron and Grubhub, Wonder continues to expand beyond its food hall model—a strategy that appears to be working as the company recently raised \$600 million at a \$7 billion valuation. LG Electronics' acquisition of Bear Robotics and DoorDash's billion-dollar-plus acquisitions of Deliveroo and SevenRooms underscore ongoing consolidation and the expansion of delivery incumbents into broader restaurant operations.

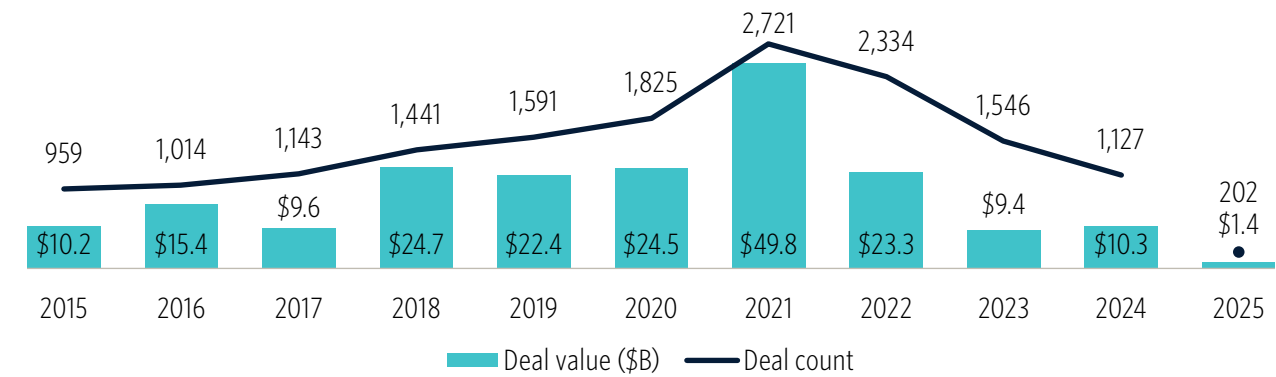

As public markets begin to stabilize, IPO momentum is building across the broader VC ecosystem. While no foodtech IPOs are imminent, successful listings in other sectors will serve as important market tests. According to PitchBook's Exit Predictor, Trax Retail, GrubMarket, and Apeel are likely IPO candidates.

About PitchBook Industry and Technology Research

Independent, data-driven, and timely market intel

As the private markets ecosystem continues to grow in complexity and competition, investors need tools and data that can give them an edge.

Our Industry and Technology Research provides detailed analysis of established industries and nascent tech sectors from the perspective of private market dealmaking, helping you stay current on market trends and providing the insights you need to pursue new opportunities with confidence.
