Adobe adds new AI-powered image-editing features to Photoshop

Adobe is bringing more AI-powered image-editing and enhancement features to Photoshop using its Firefly models. The company said today that it is rolling out an image-upscaling feature, an object blending, and an upgraded object remover to Photoshop.

Harmonize

The company said that the Generative Upscale feature will enhance an image up to 8 megapixels. This is useful for restoring details to old photos, upscaling images for prints, or adopting assets for various platforms.

In 2024, Adobe teased a feature called [Project Perfect Blend](#), which works on correcting colors, shadows, and lighting for new objects being added to an existing image. The idea is to have the new object, such as a sofa chair in a room, blend in with the environment.

Now Adobe is rolling out this feature under the Harmonize moniker, letting you place an object in a scene, remove its background, and have Photoshop use Firefly models to adjust color, lighting, shadows, and visual tones to fit the object in the scene.

The company is also rolling out an improved object-removal tool. Previously, when you used generative fill to remove the object, the tool considered the whole scene to fill in the gap of the removed object and at times, that resulted in unwanted artifacts in

In a demo seen by TechCrunch, when Adobe's director for product management at Photoshop, Joel Baer, used an earlier version of object removal to remove a small bowl of pico de gallo from a picture, the tool just added a green blob. The new version was able to successfully remove the object and replace it with the background.

Adobe is also adding a few small features to Photoshop, including a better way to manage putting assets in a shared and organized space. Plus, the company lets you choose the version of the Firefly model you want to choose while using AI features.

"We have talked to photographers, designers, and content creators to understand what are the pain points in their workflows and what slows them down. These new features will help them save time,

remove friction from their workflows, and take on some of the time-consuming tasks on their behalf,” Shambhavi Kadam, senior director of product management for Photoshop, said in a briefing.

The Generative Upscale, Harmonize, and improved object-removal features are available in beta for Photoshop on desktop and [web](#) versions. The Harmonize feature is also available on [the new Photoshop iOS app](#) through an early access program.

Adobe celebrates Photoshop's 30th anniversary with new desktop and mobile features

Frederic Lardinois — 6:00 AM PST · February 19, 2020

Adobe's Photoshop [celebrates its 30th birthday today](#). Over that time, the app has pretty much become synonymous with photo editing and there will surely be plenty of retrospectives. But to look ahead, Adobe also today announced a number of updates to both the desktop and mobile Photoshop experiences.

IMAGE CREDITS: ADOBE

The marquee feature here is probably the addition of the Object Selection tool in Photoshop on the iPad. It's no secret that the original iPad app wasn't exactly a hit with users as it lacked a number of features Photoshop users wanted to see on mobile. Since then, the company made a few changes to the app and explained some of its decisions in greater detail. Today, Adobe notes, 50% of reviews give the app five stars and the app has been downloaded more than 1 million times since November.

Also new on the iPad are additional controls for typesetting. For now, this means tracking, leading and scaling, as well as formatting options like all caps, small caps, superscript and subscript.

On the desktop, Adobe is bringing improvements to the content-aware fill workspace to the app, as well as a much-improved lens blur feature that mimics the bokeh effect of taking an image with a shallow depth of field. Previously, the lens blur feature ran

on the CPU and looked somewhat unrealistic, with sharp edges around out-of-focus foreground objects. Now, the algorithm runs on the GPU, making it far softer and foreground objects have a far more realistic look.

As for the improved content-aware fill workspace, Adobe notes that you can now make multiple selections and apply multiple fills at the same time. This isn't exactly a revolutionary new feature, but it's a nice workflow improvement for those who often use this tool.

Adobe launches Photoshop's web version with Firefly-powered AI tools

Ivan Mehta — 1:28 AM PDT · September 28, 2023

Adobe officially launched Photoshop for the web on Wednesday for all users with paid plans. The web version, which was in beta for almost two years, is now available. The new version includes AI tools such as generative fill and generative expand.

The company said that the tools in the toolbar on the web are based on workflows such as reproducing an image or selecting an object. Photoshop on the web also shows the full names of the tools for beginners instead of showing the description on the tooltip.

Adobe said that users can easily collaborate on files by sharing links with another person, even if they don't have a subscription.

Google takes on ChatGPT's Study Mode with new 'Guided Learning' tool in Gemini

Aisha Malik - 13 hours ago

In May, the company announced [Firefly-powered features](#) such as generative expand, which lets you expand an image and fill it with content based on a prompt, and generative fill, which can add or remove objects while keeping the context of an image intact. At that time, these features were only available on the beta version of Adobe Photoshop. Now, they will be available on the web version as well, which could be a platform for Adobe to issue quicker updates or test features.

Adobe said that the web version has the majority of tools from the desktop, including [the contextual taskbar](#), which suggests next steps and tools based on the workflow. However, it is still missing the patch tool, pen tool, smart object support and polygonal lasso. The company said it is working on getting these tools to Photoshop for the web.

The company told [The Verge](#), that it doesn't have plans to offer a free or freemium version of Photoshop on the web at the moment.
