The Charles Stanley Female Founders 2024 report provides an analysis of the landscape for women-led businesses in the UK. It examines the impact of female founders, their contributions to the economy, and the barriers they continue to face — particularly in securing equity investment.

The report explores key trends in female entrepreneurship, including founder demographics, key industries, and investment trends. It highlights the persistent funding gap, where male-led businesses secured over six times the equity investment raised by female-founded companies in 2024. It also examines the role of mentorship, investor diversity, and support networks in driving change.

Through case studies and survey insights, the report sheds light on female entrepreneurs’ experiences — from launching their first ventures to scaling and exiting businesses. It provides a deeper understanding of the challenges faced by women in securing funding, navigating industry biases, and accessing the networks

necessary for growth. By uncovering these insights, the report highlights opportunities to create a more inclusive and equitable entrepreneurial ecosystem in the UK.
