Eight months in, Swedish unicorn Lovable crosses the \$100M ARR milestone

Less than a week after it became [Europe's latest unicorn](#), Swedish vibe coding startup [Lovable](#) is now also a [centaur](#) — a company with more than \$100 million in annual recurring revenue (ARR).

Lovable took only eight months since its launch to get here, thanks to the skyrocketing popularity of its AI-powered website and app builder. The startup claims it now has more than 2.5 million active users, and last reported 180,000 paying subscribers.

With only 45 full-time employees, and 14 open positions on its careers page, that makes for an impressive employee-to-revenue ratio.

Subscriptions seem to be driving the bulk of Lovable's revenue, but the company isn't prioritizing sales at all costs. Shortly after Lovable said it had reached [ARR of \\$75 million](#) in June, its CEO Anton Osika wrote on X that Lovable had ["lost \\$1.5 million ARR in a single day"](#) because it had moved all users on its Team tier to its less expensive Pro tier, which now also accommodates collaboration.

The Teams plan is now being replaced by a Business tier, which sits between the Pro and custom Enterprise offerings. The new plan offers business-focused features such as self-serve, Single Sign-On (SSO), templates, private projects that won't be visible to the entire team, and the

option to opt-out from having your data be used for training.

Lovable already has a slate of large customers like Klarna, HubSpot, and Pictoroom, but there are still notable barriers and concerns around vibe coding among enterprises — where the big money is. This new tier could help Lovable find intermediary use cases and drive more businesses to use its tools for more than prototyping, which is what the startup says most people use it for today.

This has been one focus for the company, and Osika recently said that businesses were driving significant revenue from projects built with Lovable.

The startup says more than 10 million projects have been created on Lovable to date.

The \$100 million ARR club isn't large, especially in Europe, but it is growing thanks to tailwinds from all things AI. In April, Nvidia-backed B2B AI video

platform [Synthesia](#) also [surpassed that milestone](#)
— though it was founded in 2017, not late 2024.

employees. That’s almost as many as the high-profile angel investors who it said participated in this round, including Klarna CEO Sebastian Siemiatkowski, Remote CEO Job van der Voort, Slack co-founder Stewart Butterfield, and HubSpot co-founder Dharmesh Shah.

Most of Lovable’s traction seems to come from non-technical users, who use it to create prototypes that they can collaborate on later with developers to build more fleshed-out apps and websites. This, and tests, are likely the bulk of the 10 million projects that have been created on the platform to date, the company said in a press release.

But Lovable also envisions itself becoming a tool that can be used to create production-grade applications that underpin full-fledged businesses.

“Every day, brilliant founders and operators with game-changing ideas hit the same wall: they don’t

have a developer to realize their vision quickly and easily,” Osika said in a statement.

Notably, Osika recently [said](#) on X that he is now an angel investor in a software startup that was ostensibly built with Lovable. (Going by some clues on the post, that startup seems to be ad-testing platform [Stardust](#) — we’ve reached out to Stardust’s founder for confirmation, but haven’t heard back.)

Osika also [celebrated](#) that an app made by a large Brazilian edtech company using Lovable had grossed \$3 million in 48 hours. This could present another growth avenue for Lovable, which has already managed to acquire enterprise customers, including Klarna and HubSpot.

Sweden's Lovable, an app-building AI platform, rakes in \$15M after spectacular growth

Mike Butcher — 9:45 AM PST · February 25, 2025

Using generative AI to create software has been possibly the largest use case since it first appeared a couple years ago. But platforms like Cursor and Copilot are mostly confined to a world inhabited by trained engineers.

[Lovable](#), a Swedish AI startup, reached the front page of both Product Hunt and Hacker News last year after allowing anyone to create apps very easily, just using prompting. It has now raised \$15 million in a pre-Series A round led by Creandum.

Lovable enables anyone to build what it calls production-ready software without needing coding knowledge. In addition to building prototypes and websites, its GPT Engineer can ship fully functional web apps. It now claims to have 500,000 users who are building over 25,000 new products daily and says its financials are growing, too. According to the Lovable, it has now reached \$17 million in annual recurring revenue, after scaling to 30,000 paying customers.

Those numbers would objectively make it one of the fastest-growing startups in Europe, and Lovable claims it achieved this milestone with only \$2 million in capital from a €6.8 million pre-seed funding round it closed last October led by Hummingbird Ventures and byFounders (an angel syndicate).

Founder Anton Osika told TechCrunch the platform is different to competing AI-driven code-building platforms in that it's "the best way to get something that actually works."

He said the platform is using a combination of OpenAI, Google Gemini, and Anthropic, distilled into a platform that can generate the software.

"We've seen hundreds of commercial apps built on the platform, at least 25,000 apps a day," he said.

Osika — who co-founded Lovable with engineer Fabian Hedin — said he came up with the idea for Lovable when working on Depict.ai in 2023. Depict is a YC-backed company that went on to raise \$20 million in investment from Garry Tan's Initialized Capital, EQT Ventures, Northzone, and others. It applies ML in the realm of e-commerce store.

Osika was previously at CERN and Sana Labs. Hedin's previous experience includes developing the interface for the computer used by world-famous physicist Stephen Hawking and working with ex-SpaceX engineers on wheelchair technology.

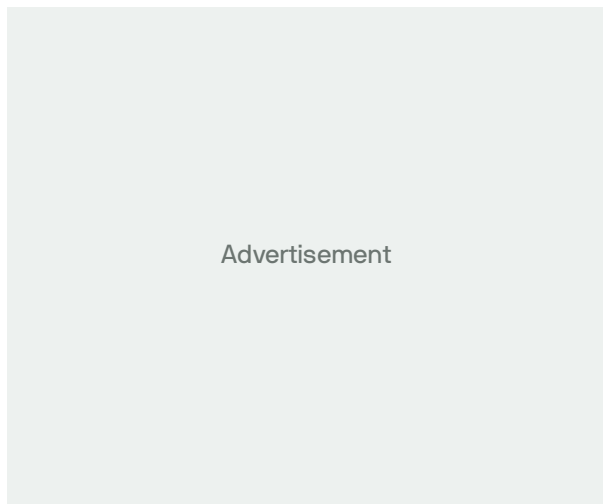

"I saw there's something even larger I can do here, giving the 99% of the population who don't know how to code access to a software engineer through AI," Osika told TechCrunch.

Lovable now plans to expand its integration with third-party services, including Supabase for databases and GitHub for code storage.

In a statement, Fredrik Cassel, general partner at Creandum, said: "I haven't seen this level of user love for a product since we invested in Spotify."

Also in the funding round were Visionaries Club, plus angel investors, including Charlie Songhurst (Meta board), Adam D'Angelo and Thomas Wolf (Hugging Face), and Eric Bernhardsson (Modal).
