Google's AI Overviews
have 2B monthly users,
AI Mode 100M in the US
and India

Alphabet and Google CEO Sundar Pichai [shared](#) an update on the adoption of consumer-facing AI apps and features, including Google Search's AI Overviews, Gemini, and AI Mode. On the company's Q2 2025 call with investors, Pichai shared that AI Overviews — a Google Search feature offering an AI summary of search results available in 200 countries and territories — now has 2 billion monthly users, up from [1.5 billion in May 2025](#).

In addition, Google's Gemini app has grown to 450 million monthly active users.

[“We continue to see strong growth and engagement with daily requests growing over 50% from Q1,”](#) Pichai said of the app.

Meanwhile, AI Mode — a way to use Google Search via an AI chat experience to get more in-depth answers — has over 100 million monthly active users, Pichai said. The service is available in the U.S. and, [more recently, India](#), but is still rolling out. The CEO also said the experience will be upgraded in the near future with the addition of the advanced research tool, Deep Search, and more personalized responses.

On the developer front, Google said more than 9 million have built with Gemini and over 70 million videos have been produced with the Veo 3 AI model since May. Google Vids, a Veo-powered feature for

text-to-video AI generation in Google Workspace, now has nearly 1 million monthly active users.

In Google Meet, over 50 million people used AI-powered meeting notes in Google Meet, the company also said.

The stats are meant to illustrate consumer demand for AI features. For instance, Google shared that AI Overviews were driving over 10% more Google Search queries, for the types of searches that show them. However, it's arguably difficult to determine how many people have truly and willingly turned to AI in Search, when the features have been thrust upon them as aggressively as they have been.

Across Google's platform and products, Google quantified its growth by monthly tokens processed, saying that it had announced at its developer conference in May that it had processed 480 trillion monthly tokens, and that figure has now doubled to 980 trillion monthly tokens.

"We are seeing significant demand for our comprehensive AI product portfolio," Pichai told investors. "Of course, this is all possible because of the long-term investments we have made in our differentiated, full-stack approach to AI."

Investors, however, reacted negatively to Google's plans to increase its capital expenditure spending to keep up with the AI race, which sent [the stock slipping](#) shortly after earnings were announced.

Google debuts NotebookLM for enterprises

Kyle Wiggers — 7:30 AM PST · December 13, 2024

In October, Google started piloting a version of [NotebookLM](#), its viral AI note-taking and research app, aimed at businesses. Now, the company's bringing NotebookLM to the enterprise, complete with work-focused security and privacy features.

Newsletters

[See More](#) ↗

NotebookLM for enterprises — which Google’s dubbing NotebookLM Plus — delivers the same experience as the consumer version, but with added controls for access and data management. Employees can upload data and files to create notebooks, podcast-like audio summaries (called Audio Overviews), and more, and search across and share these projects with org members.

Additional benefits include five times more podcast-like audio summaries, notebooks, and data sources per notebook; the ability to customize the style and tone of AI-generated notebook responses; and shared team notebooks with usage analytics.

NotebookLM for enterprises is a part of Agentspace, Google Cloud’s new platform for AI-powered “[agents](#).” It’s launching today in early access.

IMAGE CREDITS:GOOGLE

“Millions of users have used NotebookLM to make sense of complex information,” Raj Pai, VP of Cloud AI at Google, said during a press briefing. “And with Agentspace integration, we’re bringing these popular capabilities to our customers, meeting their compliance security and privacy requirements — and we’re connecting them with enterprise data and applications.”

In Agentspace, NotebookLM lives alongside agents that can analyze documents and emails, translate files, and bring in data from third-party repositories. Users can launch and search for agents from a single interface, and soon, they'll be able to build custom agents using a low-code tool, Google says.

For business, school, university, and enterprise NotebookLM users who'd prefer not to sign up for Agentspace, NotebookLM Plus is also available in Google Workspace (in the Gemini for Workspace plan). As an alternative, org users can purchase NotebookLM Plus separately via Google Cloud.

Months after its [launch](#), NotebookLM became the “it” thing on social media for its audio-generation feature, which creates a realistic-sounding, back-and-forth dialogue between two synthetic podcast hosts from a source video or audio file, URL, or document.

NotebookLM’s podcast-like audio generator has [since been cloned](#) many times over, and the key leaders behind the app have [left](#) the company as well. But Google continues to update NotebookLM with new functionality.

IMAGE CREDITS:GOOGLE

Case in point, on Friday, NotebookLM got a redesign that reorganizes the app’s tools across three panels: a Sources panel for managing imported info, a Chat panel for discussing that info through a

conversational interface, and a Studio panel that lets users create things (e.g. study guides, briefing docs, and podcast-like audio) with a single click.

Elsewhere in NotebookLM, a new, experimental feature lets users “join” the conversation in podcast-like audio by asking the synthetic hosts for more details or to expand on a concept. Here’s how it works:

- 01 A user creates a new Audio Overview.
- 02 They tap the “Interactive mode (beta)” button.
- 03 While listening, they tap Join. A host will call on them.
- 04 A user asks a question. The hosts will respond with a personalized answer based on their data sources.
- 05 After answering, the hosts will resume their back-and-forth banter.

Google notes that the feature, which is only available in English for now, won’t work with existing Audio Overviews, and that the hosts may pause awkwardly before responding or “occasionally introduce inaccuracies.”

As always, it behooves any user to fact-check answers from AI-powered tools — podcast-like or no.

Google’s AI search numbers are growing, and that’s by design

Ivan Mehta — 7:34 AM PDT · April 25, 2025

Google started testing AI-summarized results in Google Search, [AI Overviews, two years ago](#), and continues to [expand](#) the feature [to new regions](#) and [languages](#). By the company's estimation, it's been a big success. AI Overviews is [now used](#) by more than 1.5 billion users monthly across over 100 countries.

AI Overviews compiles results from around the web to answer certain questions. When you search for something like "What is generative AI?" AI Overviews will show AI-generated text at the top of the Google Search results page. While the feature has [dampened traffic to some publishers](#), Google sees it and other AI-powered search capabilities as potentially meaningful revenue drivers and ways to boost engagement on Search.

Last October, the company launched [ads in AI Overviews](#). More recently, it [started testing AI Mode](#), which lets users ask complex questions and follow-ups in the flow of Google Search. The latter is Google's attempt to take on chat-based search interfaces like ChatGPT search and Perplexity.

During its Q1 2025 earnings call on Thursday, Google highlighted the growth of its other AI-based search products as well, including Circle to Search. [Circle to Search](#), which lets you highlight something on your smartphone's screen and ask questions about it, is now available on more than 250 million devices, Google said — [up from around 200 million devices as of late last year](#). Circle to Search usage rose close to 40% quarter-over-quarter, according to the company.

Google also noted in its call that visual searches on its platforms are growing at a steady clip. According to CEO Sundar Pichai, searches through Google Lens, Google's multimodal AI-powered search technology, have increased by 5 billion

since October. The number of people shopping on Lens was up over 10% in Q1, meanwhile.

The growth comes amid intense regulatory scrutiny of Google’s search practices. The U.S. Department of Justice has [been pressuring Google to spin off Chrome](#) after the court found that the tech giant had [an illegal online search monopoly](#). A federal judge has also ruled that [Google has an adtech monopoly](#), opening the door to a potential breakup.
