Google's new AI feature
lets you virtually try on
clothes

Google announced on Thursday that it's launching a new AI feature that lets users virtually try on clothes. The tech giant is also rolling out updated price alerts and teased an upcoming feature that will let users explore shoppable outfits and room inspiration using generative imagery.

The official launch of the virtual try-on feature comes two months after Google [began testing it](#). The feature works by allowing users to upload a photo of themselves to virtually try on a piece of clothing.

The feature is launching in the United States today, letting users try on apparel items in Google's Shopping Graph across Search, Google Shopping, and product results on Google Images.

To use the feature, users need to tap on a product listing or apparel product result and select the "try it on" icon. From there, they need to upload a full-length photo of themselves. They will then be able to see what they might look like wearing the clothing. Users can save looks and share them with friends as well.

TECH DISRUPT

While Google has offered [virtual try-on technology before](#), the earlier features focused on showing items on a diverse range of models' bodies. With this new feature, the company is letting users try clothes on a virtual version of their own body.

The launch comes as Google has been investing in the virtual try-on space. Last month, the tech giant launched an [experimental app called Doppl](#) that uses AI to visualize how different outfits might look on you.

A Google spokesperson told TechCrunch that while both the new try-on feature and Doppl are powered by the same generative AI technology, the app is designed for shoppers to go even deeper with

As for the new price alerts, users can now specify the amount they want to spend on an item. Starting today, shoppers in the United States can set an alert for a product and specify their preferred size and color, as well as the price they want to pay.

“The Shopping Graph has products and prices from all across the web — so we’ll let you know when there’s an offer that meets your criteria,” said Danielle Buckley, Google’s director of Consumer Shopping, in a [blog post](#). “No more constantly checking to see if that bag you’re eyeing is finally at the right price for you or forgetting to come back to a product you loved.”

In terms of the upcoming feature for outfit and room design inspiration, Google says users will get access to it this fall. It will let users do things like get style inspo for a green flowy dress for a garden party or design ideas for a bedroom.

The tech giant says its vision match technology will generate a range of visual options for the query and use the 50 billion products in the Shopping Graph to show product listings for visual matches.

Google Lens can now check prices and inventory when shopping in the real world

Aisha Malik — 6:00 AM PST · November 19, 2024

After building out Google Lens to help [users shop online more](#) easily, Google is now updating the product to help people shop when they're in a physical store by offering product insights, price comparisons, and local inventory availability. Alongside this news, the company is bringing new shopping features to Maps, and adding more Google Pay capabilities ahead of the holiday shopping season.

The updates to Google Lens build on efforts Google already offers through its Google Shopping vertical. The idea is that people also need to make similar sets of informed shopping decisions in the real world, and using Google Lens — Google's visual search tool — can make that easier to access.

For instance, if you see a toy that you're interested in at Target, you can take a picture of it via Google Lens to find reviews and similar products in stock at

"We know consumers are really liking using Lens," Rincon said. "In fact, Lens is used for nearly 20 billion visual searches every month, and 20% of Lens searches are shopping-related. So, we're excited to bring this to market. It gives some of that important information to help a shopper feel more confident."

As for the new Maps features, Google says that users will soon be able to search for products in Maps and find nearby stores that are selling them. For instance, you can search for a holiday sweater to see which options stores near you are currently carrying.

You will be able to search for home goods, electronics, clothing, and groceries. The new Maps feature is launching in the U.S. in the coming weeks.

Google is also adding more buy now, pay later options to Google Pay, after initially [adding Affirm and Zip](#) earlier this year. Users can now use Afterpay as an option when checking out with Google Pay, with support for Klarna coming soon.

Plus, Google will soon start piloting a service to help merchants better identify fraudulent transactions. The company says the service will help unblock legitimate transactions that may be mistaken as fraud.

Google launches Doppl,
a new app that lets you
visualize how an outfit
might look on you

Google is launching a new experimental app called Doppl that uses AI to visualize how different outfits might look on you, the company [announced](#) on Thursday. The app is available on [iOS](#) and [Android](#) in the U.S.

Doppl is designed to let you virtually try on outfits on a digital version of yourself. The app works by first getting you to upload a full-body photo of yourself. From there, you can use photos or screenshots of different outfits to virtually try them on. These images could be a photo of an outfit you see at a thrift store or on a friend, or even a screenshot of an outfit you see while scrolling through social media.

IMAGE CREDITS: GOOGLE

Once you select an outfit that you want to visualize, Doppl will create an image of a virtual version of yourself wearing the outfit. Doppl can also take these static images and convert them into AI-generated videos so you can get a better sense of how the outfit would look on you in real life.

You can save your favorite looks and browse through all of your other virtual try-ons. Plus, you can also share your look with others.

The tech giant says the new app builds on [Google Shopping's recently launched](#) capabilities that allow you to try on clothes virtually. By launching the functionality in a stand-alone app, Google is making the feature easier to access while allowing people to explore their style in a fun and interactive way, the company believes. It may also help Google collect more data on how apps like this could work, to aid its future efforts in the space.

While Google has offered [virtual try-on technology before](#), the earlier features focused on showing items on a diverse range of models' bodies. With Doppl, the company is letting you try clothes on an animated version of your own body.

"We hope Doppl helps you explore your style in new and exciting ways," Google said in a blog post. "As a Google Labs experiment, Doppl is in its early days and it might not always get things right. Fit, appearance and clothing details may not always be accurate."
