Google's NotebookLM rolls out Video Overviews

Google [announced](#) on Tuesday that it's rolling out Video Overviews to NotebookLM, its AI-based note-taking and research assistant. First [introduced at Google I/O](#) in May, Video Overviews allow users to turn dense multimedia, such as raw notes, PDFs, and images, into digestible visual presentations.

Previously, the service took an audio approach to helping users understand materials with [Audio Overviews](#), a feature that gives users the ability to generate a podcast with AI virtual hosts based on documents they have shared with NotebookLM, such as course readings or legal briefs.

With this new capability, NotebookLM is taking a more visual approach to helping users understand different topics and ideas.

Google says users can think of Video Overviews as a visual alternative to Audio Overviews. The feature creates new visuals while pulling in images, diagrams, quotes, and numbers from uploaded documents to explain the content. Google says the feature is good for explaining data, demonstrating processes, and making abstract concepts easier to understand.

TECH DISRUPT

October 27-29, 2025 | San Francisco

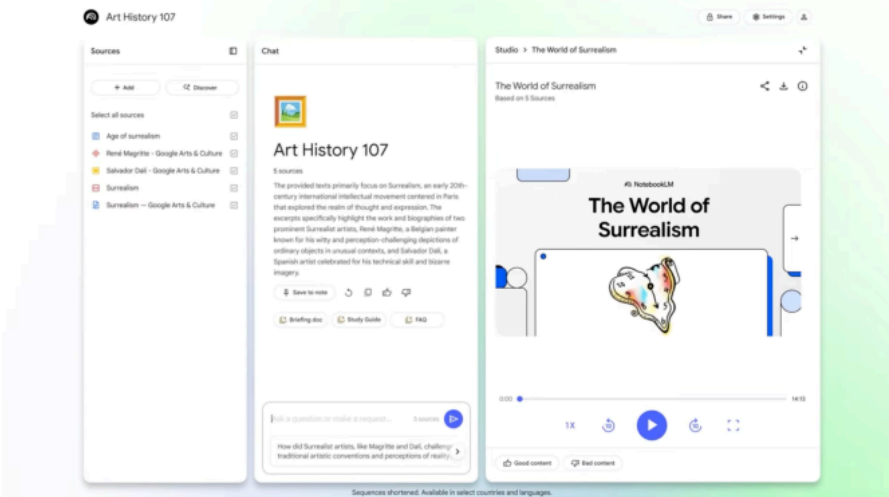

Put your brand in front of 10,000+ tech and VC leaders across all three days of Disrupt 2025. Amplify your reach, spark real connections, and lead the innovation charge. Secure your exhibit space before your competitor does.

Users can customize their Video Overviews, just as they do with Audio Overviews. They can specify topics to focus on, indicate their learning goals, describe the target audience, and more.

They can ask simple questions like, “I know nothing about this topic; help me understand the diagrams in the paper,” or specific ones like, “I’m already an expert on X and my team works on Y; focus on Z.”

Video Overviews are now rolling out to all users in English, with support for more languages coming soon, Google says.

Google also announced that it’s rolling out updates to NotebookLM’s Studio panel. Users can now create and store multiple studio outputs of the same type in a single notebook. Plus, users will now see four tiles at the top of the Studio panel for creating Audio Overviews, Video Overviews, Mind Maps, and Reports with a single click.

In addition, users can now multitask within the Studio panel. For example, they can listen to an Audio Overview while simultaneously exploring a Mind Map or reviewing a Study Guide.

Google's NotebookLM is getting Video Overviews

Aisha Malik — 10:45 AM PDT · May 20, 2025

At [Google I/O 2025](#), the tech giant unveiled new capabilities coming to NotebookLM, its AI-based

note-taking and research assistant. Most notably, the company is launching Video Overviews.

Google says users will soon be able to turn dense multimedia, such as raw notes, PDFs, and images, into digestible visual presentations.

Since its launch, NotebookLM has been about helping users understand and interact with complex documents. With this new capability, NotebookLM will be taking a more visual approach to helping users understand different topics and ideas.

Now Google is rolling out more flexibility to Audio Overviews, as it's letting users select the ideal length for their audio summaries. For example, you can choose to have an Audio Overview at the default length, or longer or shorter.

The new features announced today come a day after Google officially released NotebookLM apps for [Android](#) and [iOS](#). Up until now, NotebookLM has

only been accessible via desktop. Google has now made the service available on the go.

The apps feature background playback and offline support for Audio Overviews, along with support for dark mode. The apps also allow people to create new notebooks and view the ones they've already created. Plus, when you're viewing a website, PDF, or YouTube video on your device, you can tap the share icon and select NotebookLM to add it as a new source. Users can also view sources that they have already uploaded in each of the notebooks.

Google tests Audio Overviews for Search queries

Aisha Malik — 11:01 AM PDT · June 13, 2025

Google Search is experimenting with Audio Overviews for certain Search queries, the company [announced](#) on Friday. The feature was first introduced to [NotebookLM](#), Google's AI-based note-taking and research assistant.

The tech giant says Audio Overviews will use its latest Gemini models to give users another way to absorb and understand information.

“An audio overview can help you get a lay of the land, offering a convenient, hands-free way to absorb information whether you're multitasking or simply prefer an audio experience,” Google explained in a [blog post](#).

The feature is available starting today in [Labs](#), Google's experimental program. The company says users will see the option to generate a short Audio Overview if Google thinks it would be useful based on their specific query. Once you generate an Audio Overview, you will see a simple audio player with play/pause controls, a volume button, and the option to adjust the playback speed.

Latest in AI

[See More](#)

Google will display links in the audio player to show where it's getting the information. If you want to learn more about a topic after listening to an Audio Overview, you can click on the links to dive deeper into your search.

You can give a thumbs up or thumbs down on each Audio Overview, and the experiment as a whole in Labs.

In NotebookLM, [Audio Overviews](#) give users the ability to generate a podcast with AI virtual hosts based on documents they have shared, such as course readings or legal briefs. Google also brought Audio Overviews [to Gemini](#) in March.

Audio Overviews in Search builds on AI Overviews,
the AI-generated summaries Google supplies for
certain Google Search queries. With Audio
Overviews, Google is targeting people who are
auditory learners or want more accessible ways to
get information.

It's worth noting that today's announcement comes
a few days after a [Wall Street Journal](#) report found
that Google's AI Overviews and other AI-powered
tools are killing traffic for news publishers.
