“LG AI’s EXAONE is regarded as the leading sovereign AI model in South Korea. It won’t be used just within LG. It will be one of the main AI models

used in the Korean AI ecosystem. We expect there will be many demands for this EXAONE, as well as for our chip solutions in South Korea, but not only in Korea. The LG team is also partnering with and doing business with global customers. So, we also expect this to be used by those customers, including global customers,” Paik said.

LG AI’s decision to adopt Furiosa’s AI chip and accelerator is notable for another reason: It’s one

LG AI Research began evaluating FuriosaAI’s RNGD accelerator two years ago, aiming to test its efficiency and determine whether it could be integrated into EXAONE-powered services across LG’s ecosystem, Paik said.

The Seoul-based startup, which also operates an office in Santa Clara, has a global team of just 15 employees.

for AI applications, has rejected an \$800 million acquisition offer from Meta, opting instead to focus on developing and producing its AI chips, [according to a local media report](#).

Disagreements over post-acquisition business strategy and organizational structure, rather than price issues, caused the negotiations to break down, the report said.

with Microsoft fell through, said that it was planning to job cuts due to the “extremely challenging” macroeconomic environment. (The situation grew more dire over the past few months as Graphcore reported falling revenue and increased losses.) Meanwhile, Habana Labs, the Intel-owned AI chip company, laid off an estimated 10% of its workforce. And Meta’s custom AI chip efforts have been beset with issues, leading the company to scrap some its experimental hardware.

Even if OpenAI commits to bringing a custom chip to market, such an effort could take years and cost hundreds of millions of dollars annually. It remains to be seen if the startup's investors, one of which is Microsoft, have the appetite for such a risky bet.
