Quip is a smart clipboard
management app for iOS
and Mac

Developers of [Unite](#), an app that offers customized web app management on Mac, on Monday released a new app called [Quip](#), a clipboard app for the Apple ecosystem. The app includes features for organizing text clips, support for shortcuts to trigger text snippets, duplicate prevention, and code formatting, among other things.

Its goal is to offer users more control and customization compared with the traditional clipboard, making it a more productive alternative.

Quip is nonintrusive — on Mac, it lives on the menu bar and on iOS, it has a special keyboard — and maintains a history of all things that you copy across devices as a universal clipboard. You can easily search through the history and customize the timeframe to keep items stored, along with max items and maximum item size. You can filter through these items by text, links, images, code, files, and recency.

Quip allows you to add clipboard items to collections to easily access them later. Plus, you can make smart collections to automatically add certain clipboard items to those collections.

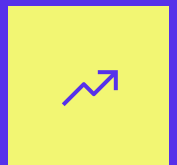

DISRUPT

October 27-29, 2025 | San Francisco

Put your brand in front of 10,000+ tech and VC leaders across all three days of Disrupt 2025. Amplify your reach, spark real connections, and lead the innovation charge. Secure your exhibit space before your competitor does.

IMAGE CREDITS:QUIP

As the app accesses all kinds of data, the company has built customizable privacy controls.

By default, the app ignores data such as passwords, credit cards, and personally identifiable data for its clip history. It will also ignore temporary data, including cache, auto-generated data, and debug information. You can customize this further and instruct the app to ignore certain apps and keywords for the clipboard.

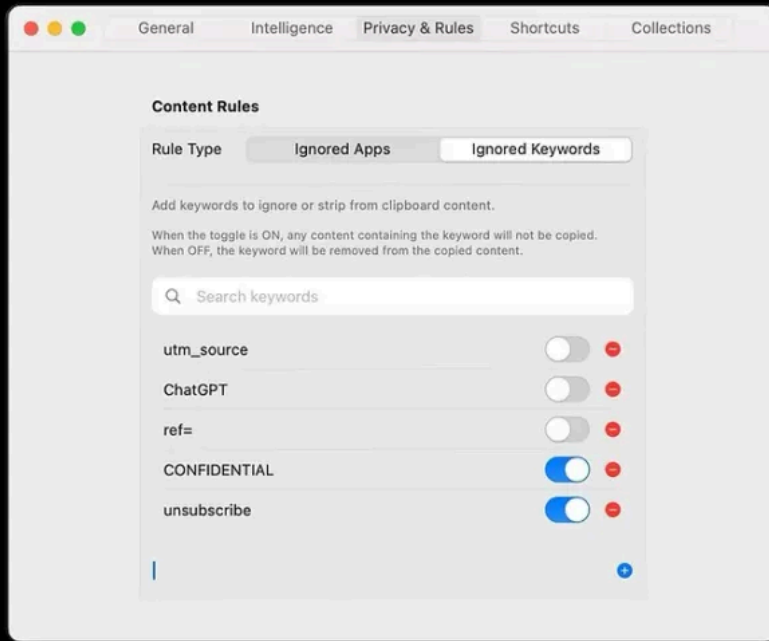

IMAGE CREDITS:QUIP

One of the useful features of the app is the “super shortcut,” which allows you to define short phrases for text expansion. For instance, you can write your address in a “super shortcut” and use the trigger keyword “addr” to paste details anywhere. This works for links and code, too.

Tech and VC heavyweights join the Disrupt 2025 agenda

Netflix, ElevenLabs, Wayve, Sequoia Capital — just a few of the heavy hitters joining the Disrupt 2025 agenda. They’re here to deliver the insights that fuel startup growth and sharpen your edge. Don’t miss the 20th anniversary of TechCrunch Disrupt, and a chance to learn from the top voices in tech — grab your ticket now and save up to \$675 before prices rise on August 7.

Quip also allows you to capture content on the screen from a presentation, videos, and a PDF through a trigger shortcut.

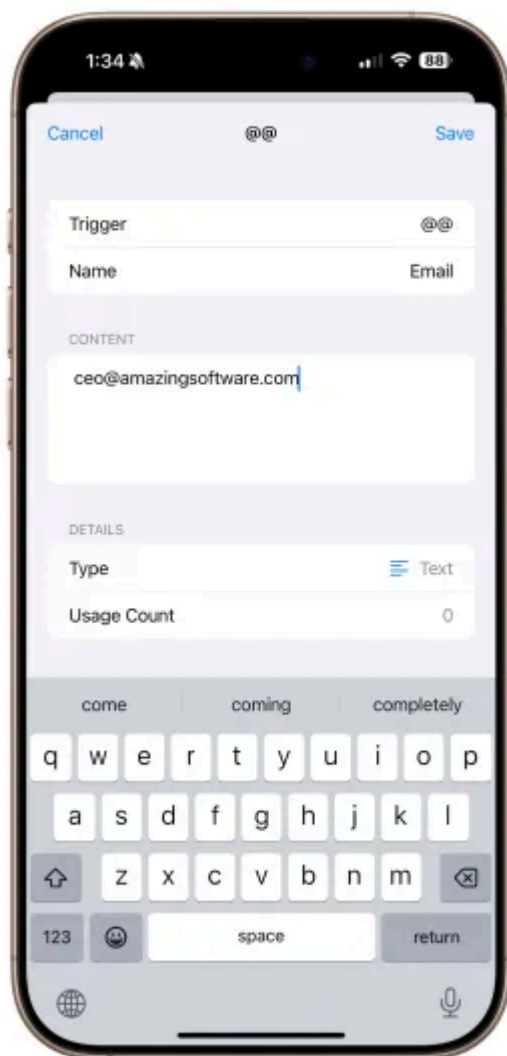

IMAGE CREDITS:QUIP

What's more, the app has some smart features, including cleaning up URLs, preventing duplicate entries in history, cleaning up white spaces, and automatically formatting code.

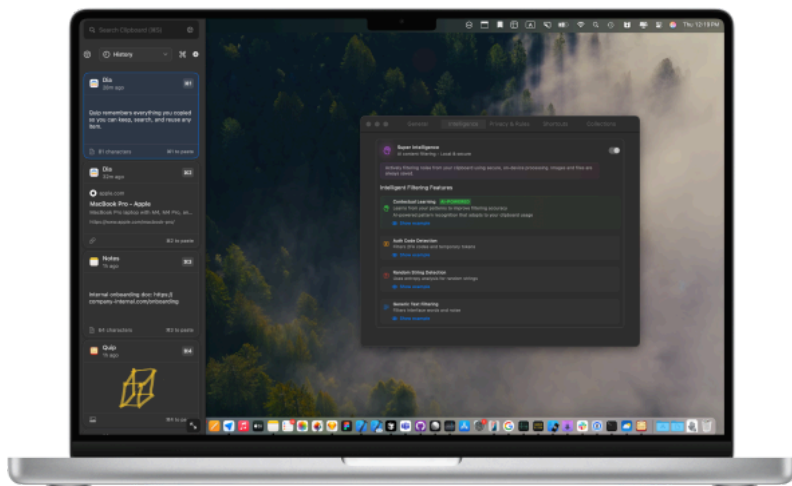

IMAGE CREDITS:QUIP

The app supports Apple’s continuity Camera feature, allowing you to post sketches, documents, or photos from iPhone to Mac using the menubar app.

The app’s developer, Binyamin Goldman, said the company is using older Apple NLP (natural language processing) capabilities for on-device intelligent features on the app. He said that, later this year, it will switch to [Apple’s offline AI models](#) to explore more capabilities. Goldman previously only did partial development work on the [apps his company created](#), he told TechCrunch over email.

However, he has done the majority of work on Quip thanks to AI tools like Cursor and Claude, he says.

You can try Quip for free for two weeks and pay \$14.99 per year to get access to apps across iOS, iPadOS, and macOS. You can also buy a stand-alone license for the Mac app for \$19.99.

Apple updates Spotlight to take actions on your Mac

Maxwell Zeff — 11:36 AM PDT · June 9, 2025

IMAGE CREDITS: APPLE

Apple announced some of its biggest updates ever to Spotlight, the Mac’s on-device search feature, during [WWDC 2025](#) on Monday. In macOS Tahoe, Spotlight can be used to run shortcuts and take

hundreds of actions, such as writing emails, setting reminders, and playing podcasts.

Apple is upgrading Spotlight as chat applications, such as Open AI's ChatGPT and Google's Gemini

or actions. Mac users can type “SM” to send a message, or “AR” to add a new reminder. Users can also assign quick keys to custom functions in Spotlight. Developers can also make their apps discoverable in Spotlight using the App Intents API.

In one demo, an Apple executive showed how users could send an entire email from Spotlight, filling out parameters such as the recipient, subject line, and message, and even clicking “send” without going to another app. Whether users will truly send emails through macOS Tahoe’s revamped Spotlight remains to be seen.

Apple says that Spotlight is now integrated with Apple Intelligence to be contextually aware. The on-device search feature will now suggest actions that users commonly take, and based on what users are currently working on.

The Spotlight upgrade was one of many updates to macOS revealed at Apple’s WWDC. Apple also said macOS was getting a new live-tracking feature that integrates with the iPhone, as well as a “liquid glass” software redesign.

Unite for Mac releases a new version to turn websites into web apps

h or create an app from URL

Apple announced [macOS Sonoma](#) at the Worldwide Developer Conference (WWDC) earlier this year with the ability to turn websites into “web apps” and add them to the dock. In response, [Unite](#), which offers similar functionality, has now released a new version with powerful customization options.

Unite 5 comes with an easier flow to create an app, a curated suggestion feature to let you quickly add new web apps, an app library to page all web apps, and support for custom link forwarding. This is the first major update for Unite — developed by Binyamin Goldman — in three years after Unite 4 was released in 2020.

The new version quickly lets you make a web app by adding a URL and picking a logo. You can select additional options for the app such as link forwarding, compact mode and menu bar app, and create an app. Unite also lets you see a preview of the app before adding it to your dock.

If you don’t want to bother adding URLs, Unite 5 has a suggestion section with categories such as social media, messaging, storage and file sharing, entertainment, email and productivity. This page has almost all popular sites so you can add them quickly. Unite 5 also has an app library function, which lets you launch, edit or remove the app.

Additionally, there is a search function that doubles up for searching the apps in your library or suggesting new ones for creation.

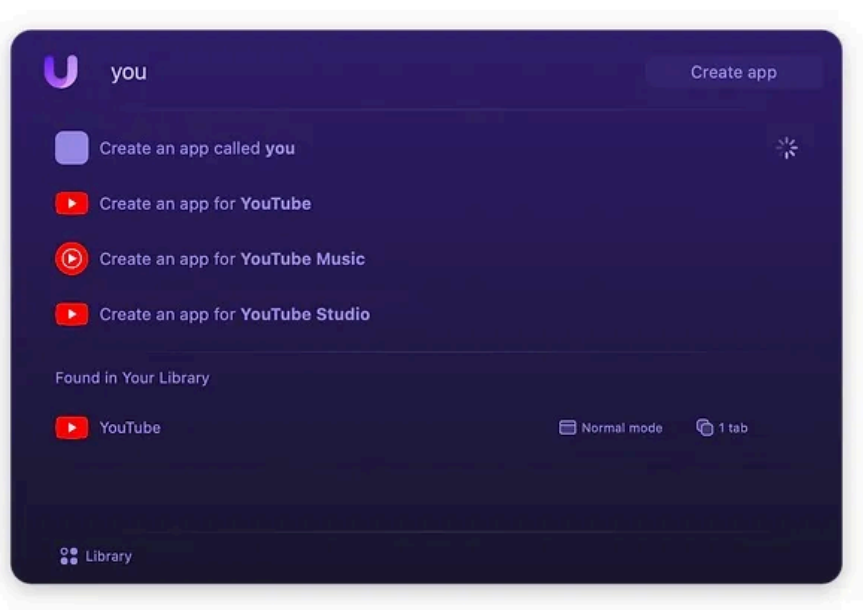

IMAGE CREDITS: UNITE

The new link-forwarding functionality lets you set default redirection for certain links per app. This means you can have certain links open in other apps and others in browsers.

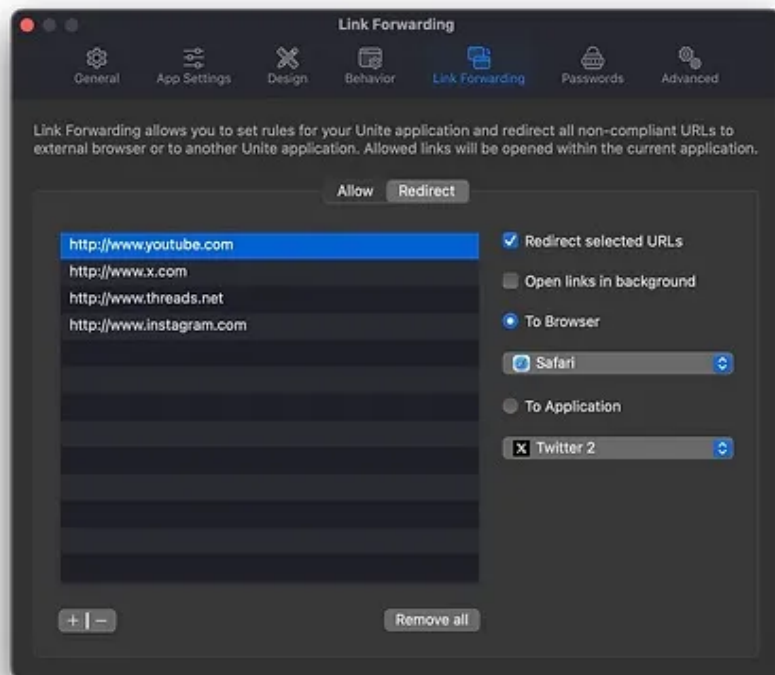

IMAGE CREDITS: UNITE

Unite 5 has a lot of browser-based functionality such as support for hiding/showing toolbar and title bar changing of default search engine, and multi-tab apps powered by its own browser. It has also introduced features like better support for the menu bar, notification sync with focus modes, improved bookmarking and better customization for keyboard shortcuts. Plus, Goldman told TechCrunch that he's working on releasing Unite for Teams next year.
