Quora's Poe releases a
developer API with
access to a bouquet of AI
models

Quora's AI platform [Poe](#) announced on Thursday that it's releasing an API that allows developers to easily access different models or bots for their own

applications.  **Cursor**  **Cline**  **Continue**  **Roo**  **Claude-3.7-Sonnet**

The API doesn't require a separate fee. Instead, usage is tracked via Poe's existing point-based subscription plans, where each model call costs a set number of points. For instance, low-quality image generation through GPT-4o in a 1:1 aspect ratio and 1024 x 1024 size would cost 328 points.

Today, Poe's plans include the \$4.99 per month plan (10,000 points per day), the \$19.99/mo plan (1 million points per month), the \$49.99/mo plan (2.5 million points per month), the \$99.99/mo plan (5 million points per month), and the \$249.99/mo plan (12.5 million points per month).

Developers will also be able to buy additional points at a rate of \$30 for 1 million tokens. Add-on tokens don't come in a fixed package, so customers can pay any dollar amount to get tokens based on that rate.

Through this API, developers can power tools like Cursor, Cline, Continue, Roo, and any others that work with OpenAI-compatible chat completion APIs. The platform currently provides access to more than 100 models across voice, text, image, and video generation.

While API provides a way for developers to use different models, Poe also offers tools aimed at consumers. Earlier this year, the company introduced a new way to allow [users to easily create AI-powered apps](#). It also offers templates to build server bots, prompt bots, and image generation bots.

At the moment, developers will need to pick and manage model use manually. Jones said that the company will consider adding budget management functionality in the future, based on developer feedback.

Bot creators now have a new way to make money with [Poe](#), the [Quora-owned AI chatbot platform](#). On Monday, the company introduced a revenue model that allows creators to set a per-message price for their bots so they can make money whenever a user messages them. The addition follows an [October 2023 release of a revenue-sharing program](#) that would give bot creators a cut of the earnings when their users subscribed to Poe's premium product.

First launched [by Quora in February 2023](#), Poe offers users the ability to sample a variety of AI chatbots, including those from ChatGPT maker OpenAI, Anthropic, Google, and others. The idea is to give consumers an easy way to toy with new AI technologies all in one place while also giving Quora a potential source of new content.

The company's revenue models offer a [new twist on the creator economy](#) by rewarding AI enthusiasts who generate "prompt bots," as well as developer-built server bots that integrate with Poe's AI.

Last fall, Quora announced it would begin a revenue-sharing program with bot creators and said it would "soon" open up the option for creators

and bot creators who build on top of models, and covering these operational costs is a key part of that,” he added.

The new revenue model could spur the development of new kinds of bots, including in areas like tutoring, knowledge, assistants, analysis, storytelling, and image generation, D’Angelo believes.

The offering is currently available to U.S. bot creators only but will expand globally in the future. It joins the [creator monetization program](#) that pays [up to \\$20 per user](#) who subscribes to Poe thanks to a creator’s bots.

Alongside the per-message revenue model, Poe also launched an enhanced analytics dashboard that displays average earnings for creators’ bots across paywalls, subscriptions, and messages. Its insights are updated daily and will allow creators to get a better handle on how their pricing drives bot usage and revenue.

Quora’s Poe introduces an AI chatbot creator economy

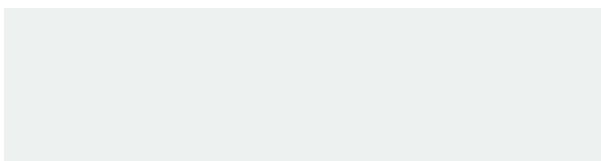

When you think of the term “creator” you generally think of someone making content for social media platforms like TikTok, YouTube or Instagram. But Quora’s AI chatbot platform Poe is now

paying bot creators for their efforts, including those who generate “prompt bots” on Poe itself, as well as server bots created by developers who

Quora raised \$75M from a16z to grow Poe, its AI chat bot platform

Quora is back at it, raising funding for the first time in nearly seven years. The questions and answers website nabbed [\\$75 million from Andreessen Horowitz](#) (a16z), which will be used to power the growth of [Poe](#), Quora's AI chat platform.

What makes Quora's AI chatbots different from the rest of the pack? Quora is trying to develop [its own subset of the creator economy](#) based around AI chatbots. So, instead of a creator making a living from YouTube ad revenue, they can try to pay the bills by building interesting AI bots.

"We expect the majority of the funding to be used to pay creators of bots on the platform through our recently-launched creator monetization program," wrote Quora CEO Adam D'Angelo in a statement.

IMAGE CREDITS:

PHOTOGRAPH BY SUPERSTOCK/IMAGESYNCH/GETTY IMAGES
In October, Quora launched this creator monetization program for Poe, which allows people who create bots or prompts on Poe to generate revenue. Even developers who integrate bots with the Poe AI are eligible to earn money.

Quora is betting big on creators, but this big fundraise allows the company to lure talented developers to Poe with the promise of financial compensation. Plus, Poe aggregates a wide range of text and image AI models like ChatGPT, DALL-E 3, Claude 2, Stable Diffusion, Llama and others, which gives creators a huge playground of tools to access.

When Quora last raised VC funding in 2017, the company was valued at around [\\$1.8 billion](#). But Quora's latest raise values the company at just

Since the launch of Poe about a year ago, however, Quora is picking up some steam. D’Angelo also shared that Quora had its highest usage week ever last week, and that the platform has over 400 million monthly unique visitors.

“Excluding Poe, Quora is cash flow positive, so all of this new funding will be used on Poe,” D’Angelo said.

According to [data](#) TechCrunch viewed from Apptopia in October, Poe’s mobile app was downloaded more than 250,000 times in February, its first month open to the public. Through October,

Poe saw over 18.4 million installs and grew to nearly 1.22 million monthly active users.

“Already, Poe shows signs of increasing returns to scale,” wrote a16z partner David George in a [blog post](#). “Currently, Poe is one of the top 5 largest generative AI-related properties, and creators have built 1M+ bots on Poe the platform.”

Quora's Poe is launching subscriptions to let you chat with GPT-4-powered bot

Ivan Mehta — 4:30 AM PDT · March 15, 2023

Yesterday, OpenAI unveiled its new [GPT-4 model](#) and competitor Anthropic unveiled its own ChatGPT competitor, [Claude](#). Parallely, Quora announced that its chatbot app Poe will now have a paid tier that will let you ask questions to bots powered by these models.

Poe subscriptions will set you back \$19.99 per month or \$199.99 per year, and you can only buy it at the moment from your [iOS](#) or [Apple Silicon-powered Mac](#). The company is working on making the paid plan available to purchase on the web.

Quora first launched [Poe last December as a closed beta](#) and later [opened it up to all iOS users last month](#).

Quora's CEO Adam D'Angelo said in [a Twitter thread](#) that paying users can chat with bots powered by GPT-4 and Claude+ (version 1.2). Sadly, the paid tier doesn't allow you to ask unlimited questions with these models. Poe caps the usage to 300 GPT-4 and 1,000 Claude 1.2 messages per month. The service said that once a user reaches the monthly limit, "bot availability or quality may be reduced."

At the moment, free users can also test and ask these models one question per day without any cost. D'Angelo said that users can have unlimited interactions with other bots like ChatGPT, Claude, Sage and Dragonfly. Poe describes these models to have different roles and features. Here is what the company says about these bots:

Claude tends to be better at many creative writing tasks, but it is more likely to refuse to answer questions.

Claude+ is significantly better than Claude, especially in non-English languages. In English, it

- Spotify raises subscription prices
- The uproar over Vogue's AI-generated ad isn't just about fashion
- Your public ChatGPT queries are getting indexed by Google and other search engines
- The best dating apps aren't even dating apps

generates more in-depth answers than Claude, as well.

Sage and **ChatGPT** tend to be better at languages other than English, and are better at programming-related tasks.

Dragonfly tends to have shorter responses, and it can be easier to get Dragonfly to follow instructions when given examples in the input.

GPT-4 is a major advance relative to ChatGPT and is the most powerful language model available to the world today. It is particularly strong at creative writing, problem-solving (e.g. math and physics) and instruction following.

Notably, models like Sage and Claude don't have knowledge of events post-2021 and Dragonfly might refuse to answer some questions. When you start a conversation with a bot, the app shows you a warning saying that it might make incorrect statements so that you don't take the answers at their face value. These are some safeguards against [manipulating bots into saying problematic or incorrect things](#).

[ChatGPT shrugged](#)

Currently, Quora and Poe are not directly connected. But last month, the company said that if Poe's generated content meet certain benchmarks, its answers could be distributed on the Q&A platform with more than 400 million monthly users.

Along with Poe, Duolingo also announced a GPT-4-powered [subscription that enables an AI-based tutor to learn languages](#). Microsoft also broke its vow of silence and confirmed that [Bing was using GPT-4 all along](#). Plus, the Bing chat now has an increased daily limit of 150 messages. Khan Academy said it is testing an AI assistant that will help teachers with administrative tasks as a

teaching assistant. On the other hand, students can take advantage of it to get help with math and suggest ideas for stories.

Given that OpenAI and Anthropic just made announcements about new bots, we will have more consumer applications adopting this technology.

Quora's Poe launches bot search, announces enterprise package

Ivan Mehta — 5:28 AM PDT · August 29, 2023

Quora's AI chatbot product [Poe](#) is still being updated at a rapid pace as the company announced new features over the past few days, including the ability to search for custom bots and a new enterprise tier for its premium plans.

In an email sent to customers over the weekend, Poe announced that it will soon launch an enterprise package for employees. The company didn't provide any further details but said that interested people can sign up for it through [a waitlist](#). This offering sounds more like a group subscription package for corporates so employees can use Poe's premium tier. However, there is no information about customized chatbots for corporate clients.

Poe [first launched subscriptions in March](#) and has been offering early access to [advanced models to paid users](#) before rolling it out to the free tier users.

Last week, Poe extended its [chatbot's availability in Japanese](#). Additionally, it launched a search functionality to look for custom bots. In April, Poe launched a feature to let users [create their own custom bots using simple prompts](#). Now, the company has made it easy to discover these bots. Last month, Poe launched ["temperature" control](#) for custom bots, which lets your bot have more varied or more consistent responses.
