Telecom giant Orange warns of disruption amid ongoing cyberattack

Lorenzo Franceschi-
Bicchierai

— 8:00 AM PDT · July 29,
2025

Orange, a French telecommunications giant and one of the largest phone providers in the world, [announced](#) on Monday that it was the victim of an unspecified cyberattack.

In the announcement, the company said that it detected a cyberattack “on one of its information systems” on July 25, and that it proceeded to “isolate potentially affected services and minimize any impact.”

The move to isolate affected systems, Orange added, caused disruptions to some of the company’s platforms, as well as business customers and some public sector services mostly in France, according to a translation of the statement. The announcement said that the solutions the company is implementing will gradually restore services by Wednesday, and that “there is no evidence to suggest that any internal or customer data has been exfiltrated.”

Orange did not respond to TechCrunch’s request for comment, which included questions about the nature of the cyberattack, and whether the company has the technical means to detect any data exfiltration.

The company said in the announcement that it is engaging and informing affected customers, and filed a complaint with “relevant authorities,” without providing specifics. Companies in Europe that are

Japanese crypto exchange DMM Bitcoin confirmed on Friday that it had been the victim of a hack resulting in the theft of 4,502.9 bitcoin, or about \$305 million.

[According to crypto security firm Elliptic](#), this is the eighth largest crypto theft in history.

DMM Bitcoin said it detected “an unauthorized leak of Bitcoin (BTC) from our wallet” on Friday and that it was still investigating and had taken measures to stop further thefts. The crypto exchange said it also “implemented restrictions on the use of some services to ensure additional safety,” according to a machine translation of [the company’s official blog post](#) (written in Japanese).

The company also promised that all customers’ Bitcoin deposits “will be fully guaranteed as we will procure the equivalent amount of BTC that was leaked with support from our group companies.”

DMM Bitcoin did not immediately respond to a request for comment.

According to De.Fi, the web3 security firm that [tracks](#) crypto thefts and scams, [hackers stole around \\$2 billion in crypto](#) across dozens of cyberattacks and thefts last year. While that is still a

Yieldstreet says some of its customers were affected by the Evolve Bank data breach

The alternative investment platform Yieldstreet is the latest company to reveal that its customers were affected by [the recent data breach at Evolve Bank and Trust](#), TechCrunch has exclusively learned.

On Tuesday, Yieldstreet spokesperson Clare Burrows confirmed to TechCrunch that “some Yieldstreet customer information may have been impacted” as a consequence of the Evolve breach.

“We have communicated this to all potentially affected customers and continue to follow best practices regarding third-party cybersecurity incidents,” Burrows said in an email.

IMAGE CREDITS: BRYCE DURBIN / TECHCRUNCH

Burrows declined to say exactly what kind of customer information was stolen, nor how many customers were affected.

Last week, Evolve, which is [a popular financial institution for fintech startups](#), announced that a cyberattack affected “the data and personal information of some Evolve retail bank customers and financial technology partners’ customers.”

As of this writing, the following companies have confirmed to TechCrunch that their customers were affected by the Evolve breach: Affirm, Branch, EarnIn, Marqeta, Melio, [Mercury](#), Yieldstreet and [Wise](#).

Do you have more information about the Evolve breach and how it's impacting partner companies? From a non-work device, you can contact Lorenzo Franceschi-Bicchierai securely on Signal at +1 917 257 1382, or via Telegram, Keybase and Wire @lorenzofb, or [email](#). You also can contact TechCrunch via [SecureDrop](#).

On Monday, Jason Mikula, a fintech reporter, [wrote on X](#) that Branch, an Evolve partner, notified customers that it was affected by the Evolve incident.

Tech and VC heavyweights join the Disrupt 2025 agenda

Netflix, ElevenLabs, Wayve, Sequoia Capital — just a few of the heavy hitters joining the Disrupt 2025 agenda. They're here to deliver the insights that fuel startup growth and sharpen your edge. Don't miss the 20th anniversary of TechCrunch Disrupt, and a chance to learn from the top voices in tech — grab your ticket now and save up to \$675 before prices rise on August 7.

San Francisco | October 27-29, 2025

A Branch spokesperson told TechCrunch on Tuesday that the company “continues to work with Evolve to understand the scope and the impact this incident may have on Branch account holders.”

“Out of an abundance of caution, we issued an email notification to account holders about the

incident and urged them to exercise vigilance in monitoring account activity and protecting their account credentials. We also reassured them that the safety and security of the Branch platform and mobile application had not been compromised,” the spokesperson wrote in an email.

Mikula also [reported that Juno](#), a crypto service company, and [Yotta](#), a fintech company, were affected by the Evolve breach. [In his newsletter Fintech Business Weekly](#), Mikula reported having reviewed stolen data from Evolve, which was posted online by the cybercrime gang LockBit. LockBit has claimed responsibility for the hack. According to the data, Mikula wrote, the following companies may have also been affected: Bitfinex, BrightSide, Copper Banking, Dave, Fund That Flip, Juno, Nomad, Rho and SoLo Funds.

None of the above companies responded to TechCrunch’s request for comment, except for SoLo, Nomad, and Bitfinex. A SoLo spokesperson declined to comment. A Nomad spokesperson confirmed that it was affected by the Evolve breach, but also said that “it’s important to highlight that all Nomad accounts are secure and can continue to be used normally,” and that the company terminated its partnership with Evolve last year. A Bitfinex spokesperson said that the company’s “systems and data were not compromised in this incident.”

It’s likely that we still don’t know of several other companies. When reached by TechCrunch, Evolve spokesperson Eric Helvie declined to say how many of the bank’s partner companies or clients were affected by the breach. Instead, Helvie referred us to [Evolve’s blog post regarding the incident](#).

This story has been updated to include comment from Nomad.

UPDATE, July 3 10:20 a.m. ET: This story has been updated to clarify that one of the companies that has been reported to have been affected by the Evolve breach is [Copper Banking](#), and not [Copper](#). The two are different companies, and a Copper spokesperson said that “no Copper data is processed by Evolve Bank, and as a result, no Copper data could potentially be impacted by a breach of Evolve Bank’s systems.” We regret the error.

UPDATE, July 3, 10:27 a.m. ET: This story was updated to include comment from Bitfinex.
