**Threads adds improved
content performance
metrics for creators**

Threads is introducing enhanced metrics to help users better understand how their posts are performing and where their content is getting discovered, the company [announced](#) on Tuesday.

Users can now see more detailed information in the platform's "Insights" dashboard. When they navigate to the "Interactions" section, they will see engagement by likes, replies, quotes, and reposts. The "Followers" section shows follower growth with geographic data, including top cities and countries, and demographic information like age range and gender.

IMAGE CREDITS: [JAKUB PORZYCKI/NURPHOTO](#)

In addition, users can see how their post performance has changed through a new chart that's designed to showcase trends in their content for a seven- to 90-day period.

Since eligible Threads posts can be recommended to people on Instagram and Facebook, Threads will now let users see the places where people encounter their content. They can see the percentage of views each app drove for their posts.

DISRUPT

October 27-29, 2025 | San Francisco

Put your brand in front of 10,000+ tech and VC leaders across all three days of Disrupt 2025. Amplify your reach, spark real connections, and lead the innovation charge. Secure your exhibit space before your competitor does.

The Meta-owned platform says the updates are focused on helping creators build audiences, grow their presence, and understand what sorts of content resonates with their followers.

The move comes as Threads is [growing fast](#). Recent data from market intelligence provider [Similarweb](#) revealed that the platform is catching up to top competitor X in terms of mobile app users.

In June 2025, Threads’ mobile app for iOS and Android saw 115.1 million daily active users, representing 127.8% year-over-year growth. On the other hand, X reached 132 million daily actives, with its year-over-year growth declining by 15.2%.

It makes sense for Threads to equip creators on its platform with additional tools to build out their presence on the social network as it continues to take on X and other competitors.

Threads is nearing X's daily app users, new data shows

Sarah Perez — 8:41 AM PDT · July 7, 2025

Instagram Threads is close to catching up to top competitor X in terms of mobile app users, according to new data from market intelligence provider [Similarweb](#). In June 2025, Threads' mobile app for iOS and Android saw 115.1 million daily active users, representing 127.8% year-over-year growth; X reached 132 million daily actives, as its year-over-year growth declined by 15.2%.

IMAGE CREDITS: JAKUB PORZYCKI / NURPHOTO / GETTY IMAGES

By comparison, decentralized social network [Bluesky](#) grew a sizable 372.5% year-over-year as of June, but its worldwide daily active users remain a fairly small figure: just 4.1 million daily active users as of June, the firm's estimates indicate. (In total, Bluesky has over 37 million registered users at this time, [its own data](#) shows.)

Bluesky had benefited greatly late last year following the U.S. presidential elections, as users left X in protest of its owner, Elon Musk, becoming closely allied with President Trump. That initial surge [began slowing earlier](#) this year. More recently, Bluesky has been on the receiving end of [a number of complaints](#) that it's become too much of a left-leaning echo chamber, which could have pushed some users back to Threads.

While Bluesky still has long-term potential because of how its [infrastructure enables](#) a more open, user-configurable form of social networking, the current race now is between Threads and X.

Overall, the new mobile data suggests that Threads could become a more significant competitor for X across iOS and Android, potentially eating up more of the ad dollars, which is Meta's only [monetization strategy for Threads at this time](#).

However, that competition is only neck and neck on mobile devices, as X has an advantage on the web.

Similarweb found that X's worldwide daily web visits are well ahead of Threads', with the former seeing 145.8 million average daily web visits worldwide in June 2025, compared with just 6.9 million for Threads.

Here, Threads is only a bit ahead of Bluesky's 5.3 million average daily web visits.

For Bluesky, the figure likely means casual users are visiting its website to read posts, but may or may not have become engaged enough to download its mobile app. Meta's Threads has put more of its focus on its mobile app from day one, as it launched before the web app and [sees more traction](#).

In the U.S. market, things look a little different.

Bluesky saw 2.4 million average daily web visits in June from U.S. users, higher than Threads' 985,200. Of course, X was still the one to beat, with 33.1 million average daily web visits in the U.S.

On mobile, it was a closer competition between Threads and X, with the Meta-owned social network seeing 15.3 million U.S. daily active users on iOS and Android compared with 22.9 million for X. (Bluesky had a much smaller showing, with just 1.1 million U.S. daily actives on mobile, the firm's date shows.)

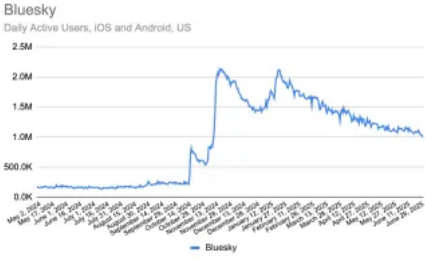

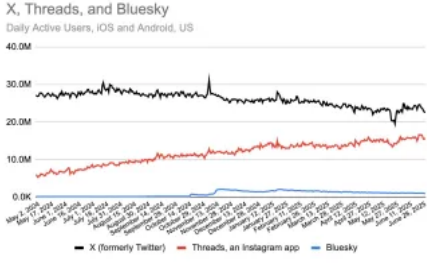

IMAGE CREDITS:SIMILARWEB

Bluesky’s long-term potential, meanwhile, may have less to do with surges of new users who come in protest of another network’s policies and more with its investment in a broader open social ecosystem. Those who go to Bluesky simply because it’s not X may not stay on the app if it doesn’t immediately meet their needs, and they may return to X or move to Threads instead.

Those who go to Bluesky because of the technology it’s building may be more likely to remain to see what it’s able to create over time.

Officially, [Threads has 350 million monthly active users](#), per Meta’s latest earnings report. X, a private company, is no longer required to share metrics publicly. Musk last year claimed that X [has 600 million](#) monthly active users, however.

Threads now lets all users save drafts and take photos within the app

Aisha Malik — 9:42 AM PST · March 7, 2024

Threads, the Twitter-like app from Instagram, is rolling out the ability for users to save a draft and take photos within the app. Instagram head Adam Mosseri [announced](#) the features today, noting they are designed to “make it easier to share your ideas on the fly.” The official rollout comes a few weeks after Threads began [testing the features](#) with a select number of users. At the time, Mosseri said they were two of the platform’s “most requested” features.

The new features shape Threads into more of a competitor to X (formerly Twitter), which has had drafts and a camera shortcut for as long as we can remember. However, Threads only lets you save one draft at a time, whereas X lets you save multiple. Threads users can now start writing out a post that they may want to share later, and then swipe down to save it as a draft.

As for the ability to take pictures within the app, you can do so by clicking the camera icon in the composer. Once you take a photo, you can choose to share it or retake it. The shortcut makes it easier to share photos in the moment and removes the need to first use your device's camera app to take a photo and then attach it to a Threads post via your camera roll.

The launch of the camera shortcut comes as app researcher Nima Owji indicated that X might be looking to adopt Threads' [carousel format](#) for displaying images. X currently displays images in a grid format, but that may change in the future.

Threads has gradually been adding new features since [its launch](#) in July 2023 to better take on X. The platform recently added a [bookmarking feature](#), [trending topics](#) and [cross-posting](#) from Facebook to Threads.

Threads widens the gap with X, with triple the daily downloads on iOS

Although an app's downloads aren't an exact proxy for usage, they can hint at where the market is headed. And in the case of the alt-Twitter wars, the app winning the game right now is Instagram's Threads. Meta's take on Twitter now sees triple the daily downloads of X (formerly Twitter) on iOS globally, and ...
