Waymo has started testing its autonomous vehicles on public roads with a human safety operator behind the wheel. As it has in every other city it has launched in, Waymo will progress to fully autonomous testing once its tech has been further validated on Dallas streets.

Bonelli wouldn't disclose precise launch dates or how many vehicles would be in the initial robotaxi fleet. He did say Waymo will scale the fleet with Avis to hundreds of vehicles over time.

Avis Budget Group CEO Brian Choi said the partnership marks a "pivotal milestone in its evolution from a rental car company to a leading provider of mobility solutions."

Uber and Waymo's
commercial robotaxi
service is open for
business in Atlanta

Waymo robotaxis can now be hailed in Atlanta via Uber. The two companies, which already offer the “Waymo on Uber” service in Austin, said on Tuesday the commercial service will initially cover about 65 square miles in Atlanta.

The launch, if successful, is expected to propel the businesses of both companies, Uber, which has locked its autonomous vehicle fleet, and Waymo, which has a fleet of 1.5 million.

The “Waymo on Uber” service is a hybrid of sorts where robotaxis and human-driven vehicles intermingle. Uber users can set their preferences in the app to increase the chances of being matched with a Waymo.

That structure differs from the other markets where Waymo operates. In those cities, riders use the Waymo One app to hail robotaxis.

When an Uber user is notified they’ve been matched with a Waymo, they can choose to accept or switch to a human-driven ride. Once the robotaxi arrives, the user can see the vehicle’s location on the app.

Robotaxi rides will cost the same as an UberX, Uber Comfort, or Uber Comfort Electric driven by a human, the companies said.

The “Waymo on Uber” service splits the responsibilities of owning and operating a fleet of driverless vehicles. Uber handles the charging, maintenance, and cleaning of the autonomous vehicles, and manages access to the robotaxis via its app. Meanwhile, Waymo monitors the tech and the autonomous operations, including roadside assistance and certain aspects of rider support.

Last September, Uber and Waymo announced plans to offer a robotaxi service in Austin and Atlanta in early 2025 as part of an expanded partnership. In March, the companies started offering the “Waymo on Uber” robotaxi service in Austin. Waymo has more than 100 robotaxis in Austin, according to a report from the company.

Waymo is now available on Uber in more than 100 cities, including the [Uber app in Phoenix](#) since October 2023. And the two companies [expanded the partnership](#) last year with plans to launch a more exclusive “Waymo on Uber” robotaxi service in Austin and Atlanta in 2025. (Atlanta has yet to launch.)

The structure of the “Waymo on Uber” service forecasts how each company envisions its role in the nascent autonomous vehicle industry.

Under the arrangement, Waymo will be responsible for vehicle testing, roadside assistance, and certain aspects of rider support. Uber will manage the fleet services such as vehicle cleaning,

maintenance, inspections, charging, and depot operations through a company called Moove Cars, which is rebranding to Avomo. In 2021, Uber acquired a 30% minority interest in the European company Moove Cars — not to be mistaken with Moove, which coincidentally is [managing Waymo's AV fleet in Phoenix](#).
