Allianz Life data breach affects 1.1 million customers

The July data breach at U.S. insurance giant Allianz Life allowed hackers to steal the personal information of 1.4 million customers, according to data breach notification site Have I Been Pwned.

Allianz Life disclosed the data breach in late July, confirming that hackers stole the personal information of the “majority” of its 1.4 million customers and its employees from a cloud-stored customer relationship database. Allianz has so far refused to confirm exactly how many people are affected by the breach.

Have I Been Pwned, a data breach notification site that alerts people when their email address has been caught up in data breaches, said in a post on Monday the Allianz Life breach includes customers’ names, gender, date of birth, email and home addresses, and phone numbers from a database hosted by cloud giant Salesforce.

Allianz Life later told the states of Texas and Massachusetts the hackers also stole Social Security numbers in the breach.

Brett Weinberg, a spokesperson for Allianz Life, declined to comment to TechCrunch as the company’s investigation is ongoing.

Allianz Life is one of a series of tech and corporate giants that have been targeted in recent months by a hacking crew known as ShinyHunters, a group

HR giant Workday says hackers stole personal data in recent breach

Zack Whittaker — 6:04 AM PDT · August 18, 2025

Workday, one of the largest providers of human resources technology, has confirmed a data breach that allowed hackers to steal personal information from one of its third-party customer relationship databases.

In [a blog post published late Friday](#), the HR technology giant said the hackers stole an unspecified amount of personal information from the database, which Workday said was primarily used to store contact information, such as names, email addresses, and phone numbers.

IMAGE CREDITS:

SMITH COLLECTION/GADO / GETTY IMAGES

Workday did not explicitly rule out that customer information was taken in the data breach, stating only that there was “no indication of access to customer tenants or the data within them,” which corporate customers typically use to store the bulk of their human resources files and employees’ personal data.

The company said the stolen information may be used to further social engineering scams, where hackers trick or threaten victims into giving them access to sensitive data.

Workday has more than 11,000 corporate customers, serving at least 70 million users around the world, [per the company’s website](#). Bleeping

Newsletters

[See More ↗](#)

Computer [reports](#) that the hack was discovered on August 6.

Workday did not identify the breached third-party customer database platform, but follows in a recent spate of cyberattacks targeting Salesforce-hosted databases used by large companies to store customer data. In recent weeks, [Google](#), [Cisco](#), [airline giant Qantas](#), and [retailer Pandora](#) have all had reams of data stolen from their Salesforce databases.

Google attributed the breaches to ShinyHunters, a group of hackers known for using voice phishing to steal corporate data by tricking company employees into granting them access to their cloud-based databases. Google said ShinyHunters was likely in the process of preparing a data leak site to extort its victims into paying the hackers to delete the data, akin to how ransomware gangs operate.

Connor Spielmaker, a spokesperson for Workday, did not comment beyond Workday’s blog post or answer TechCrunch’s questions, including whether Workday knows how many individuals had data stolen or who the stolen data relates to, such as Workday employees or Workday’s corporate customers. Workday would not say if it has the technical means, such as logs, to determine what customer data was exfiltrated.

As of the time of publication, Workday’s blog post [disclosing the breach](#) contained a hidden “noindex” tag in its source code, which instructs search engines to ignore the page, making it difficult for anyone searching the web to find the page.

It’s not clear for what reason Workday is hiding its data breach notification from search engines.

X's declining Android app installs are hurting subscription revenue

Sarah Perez — 1:49 PM PDT · August 18, 2025

Elon Musk's X is struggling on Android devices in terms of new installs, even while App Store downloads grow, according to new data from app intelligence provider Appfigures. In July 2025, X downloads on Google Play saw a significant decline, as new installs dropped by 44% year-over-year worldwide, even as iOS downloads grew by 15%.

This steep drop in installs is pulling down X's overall average, leading to a 26% decrease in total mobile downloads year-over-year as of July. That's still slightly better than the month prior, when total downloads had fallen by 35%, thanks to another sharp drop in Android downloads, which were then down by nearly half (49%) year-over-year.

It’s not clear where would-be X Android users are going. Rival Bluesky has seen slowing growth in recent months, and its Google Play app pulled in just 119,000 downloads in July. That’s nowhere near the millions that install X on iOS or Android every month. However, Meta’s Threads daily active users have been [catching up to X on mobile devices](#), so, possibly, some Android users could be accounted for there.

- How your solar rooftop became a national security issue
- A comprehensive list of 2025 tech layoffs
- Co-founder of Elon Musk’s xAI departs the company
- Google CEO adds a new calendar feature at Stripe co-founder’s request
- NASA has sparked a race to develop the data pipeline to Mars
- Why I finally left Spotify

In addition to the drop in Google Play installs, X is struggling to grow its subscription revenue, Appfigures found.

In July, X earned \$16.9 million in net revenue, down from the \$18.8 million it earned in March 2025. However, that was a slight tick up from the \$16.8 million it generated in June. (Of course, X still earns the majority of its overall revenue from ads, not in-app premium subscriptions.)

While the declining demand for X on Android is partially to blame for revenue declines, X is also likely losing paying customers to Grok. The latter now has its own [stand-alone app](#) that attracts those who were buying X subscriptions primarily for the AI perks.

We're always looking to evolve, and by providing some insight into your perspective and feedback into TechCrunch and our coverage and events, you can help us! [Fill out this survey to let us know how we're doing](#) and get the chance to win a prize in return!
