

MERCURY

More than business banking.

Mercury is a financial technology company, not a bank. Banking services provided through Choice Financial Group, Column N.A., and Evolve Bank & Trust; Members FDIC.

AI

Anthropic takes aim at OpenAI, offers Claude to ‘all three branches of government’ for \$1

Just a week after OpenAI announced it would offer ChatGPT Enterprise to the entire federal executive branch workforce at [\\$1 per year per agency](#), Anthropic has [raised the stakes](#). The AI giant said Tuesday it would also offer its Claude models to government agencies for just \$1 — but not only to the executive branch. Anthropic is targeting “all three branches” of the U.S. government, including the legislative and judiciary branches.

The package will be available for one year, says Anthropic.

The move comes after [OpenAI, Anthropic, and Google DeepMind](#) were added to the General Services Administration’s list of approved AI vendors that can sell their services to civilian federal agencies. TechCrunch has reached out to Google to see if it plans to respond to Anthropic’s and OpenAI’s challenges in kind.

Anthropic’s escalation — a response to OpenAI’s attempt to undercut the competition — is a strategic play meant to broaden the company’s foothold in federal AI usage.

“We believe the U.S. public sector should have access to the most advanced AI capabilities to tackle complex challenges, from scientific research to constituent services,” Anthropic said in a statement. “By combining broad accessibility with uncompromising security standards, we’re helping ensure AI serves the public interest.”

Anthropic will offer both Claude for Enterprise and Claude for Government. The latter supports FedRAMP High workloads so that federal workers can use Claude for handling sensitive unclassified work, according to the company.

FedRAMP High is a stringent security baseline within the Federal Risk and Authorization Management Program (FedRAMP) for handling unclassified sensitive government data.

Anthropic will also provide technical support to help agencies integrate AI tools into their workflows, according to the company.

Anthropic, along with OpenAI, xAI, and Google, has been granted up to \$200 million by the Department of Defense to leverage AI for national security, but the AI firm clearly hopes to integrate into a broader array of government work, including science research and health services. Anthropic noted in its press release that Claude is already being used at Lawrence Livermore National Laboratory to accelerate scientific discoveries, and also by the District of Columbia Department of Health to help residents access health services in multiple languages.

Anthropic says it is able to make such deployments because Claude “meets the government’s highest security standards.” Aside from being certified for FedRAMP High, customers can access Claude through their existing secure infrastructure via partnerships with AWS, Google Cloud, and Palantir, giving them more control over their data.

Anthropic’s multicloud access could give it an edge in the competition with OpenAI, whose current official FedRAMP High offering is tied to Azure Government Cloud only. While Azure is widely adopted in government, some government agencies and security teams might prioritize data sovereignty, infrastructure control, and the operational flexibility a multicloud strategy offers.

OpenAI is, however, actively working to reduce its reliance on Azure so it can embrace a more diversified infrastructure approach.

Why Paradigm built a spreadsheet with an AI agent in every cell

Anna Monaco has been building AI agents since before the term “AI agents” was even a thing. After building numerous chatbots, she started looking for other types of interfaces that made sense for AI agents and landed on spreadsheets.

“I had this personal pattern, and I noticed that a lot of other people had this pattern, of putting very important CRM data in spreadsheets just because it was the most flexible thing,” Monaco told TechCrunch. “But it was actually a pain to maintain. There’s so much manual work involved. So [I] just went down this rabbit hole of building a product for myself and wanted to reimagine what a spreadsheet could look like with the full power of LLMs.”

The result was [Paradigm](#), an AI-powered spreadsheet equipped with more than 5,000 AI agents. Users can assign different prompts to individual columns and cells, and individual AI agents will crawl the internet to find and fill out the needed information.

Paradigm works with AI models from Anthropic, OpenAI, and Google’s Gemini, Monaco said, and supports model switching.

“We want to support every single model because we want our users to be able to have the highest reasoning outputs when they need it, but also the cheapest outputs,” Monaco said. “It’s just a constant cycle of evaluating different models, working closely with model providers to make sure our limits are high enough, and then giving some of that power to our users.”

The company launched a small closed beta preview in late 2024 and has been iterating on the product using customer feedback. Paradigm attracts users ranging from consultants to sales professionals and finance folks and operates on a subscription model with tiers based on usage. Paradigm counts the consulting firm EY, AI chip startup Etched, and AI coding company Cognition as early customers.

Paradigm is now releasing its product to the public and announcing that it raised a \$5 million seed round led by General Catalyst. The company has raised \$7 million to date. Monaco said the funding will go toward executing on the company’s “extremely aggressive product roadmap.”

“The interesting thing that happened when we fundraised is some people we pitched just kept on using and paying for the product,” Monaco said. “I think that was a cool part of it. We found a lot of value from it internally and our investors, not even just our investors — other investors that we talked to — are still using it.”

Paradigm isn’t the only company looking to give spreadsheets an AI upgrade. [Quadratic](#), which has raised more than \$6 million in venture funding, is a 3-year-old startup with a similar goal. Legacy companies like Google and Microsoft are also adding AI tools to their spreadsheet applications.

Monaco said that she doesn’t really consider the competition because Paradigm doesn’t think of itself as an AI-powered spreadsheet. She said she thinks of it as a new AI-powered workflow that happens to be in the familiar form of a spreadsheet but won’t necessarily stay that way forever.

“What I’m seeing in the most popular AI products now is this fine balance between present and future,” Monaco said. “How do you build something that is really powerful and generates a lot of value now but also sets you up really well for the future?”

That's the question that I asked myself a year ago when I was starting the company."

OpenAI launches a sub-\$5
ChatGPT plan in India

- Latest
- Security

- AI
- Venture
- Apps
- Apple

- Events
- Podcasts
- Newsletters

What's New

Nick Turley, VP at OpenAI and head of ChatGPT, said that this plan will increase the message, image generation, and file uploads by 10 times over the free tier. The ChatGPT Go plan will also enable better memory retention for more personalized responses, Turley said.

Version 1.2025.084
IMAGE CREDITS: JAGMEET SINGH / TECHCRUNCH

We just launched ChatGPT Go in India, a new subscription tier that gives users in India more access to our most popular features: 10x higher message limits, 10x more image generations, 10x more file uploads, and 2x longer memory compared with our free tier. All for Rs. 399. 🇮🇳

— Nick Turley (@nickaturley) [August 19, 2025](#)

“Making ChatGPT more affordable has been a key ask from users! We’re rolling out Go in India first and will learn from feedback before expanding to other countries,” Turley said.

From a currency conversion standpoint, the Plus plan was higher than \$20 for Indian users when offered in local currency. The new Go plan offers a more affordable alternative to people who are looking to use ChatGPT primarily for chat, image generation, and file processing.

Last month, Turley noted that ChatGPT now has more than [700 million weekly users](#) worldwide — up from 500 million in March. OpenAI launched its updated image generator feature for ChatGPT in March, [and since then, it has seen an uptick in usage in India](#). OpenAI CEO Sam Altman said in a recent podcast that India is [the company's second biggest market](#). With the Go plan, it wants to cash in on that.

According to app analytics firm AppFigures, India has been the leading country in terms of ChatGPT app downloads across platforms, with over 29 million downloads coming from the country in the last 90 days. However, the app only made \$3.6 million in this period from users in the country.

This move will likely nudge more consumers to subscribe to using ChatGPT more, given its pricing. Other AI companies have also made moves to attract users from the country's internet user base of over 850 million. Last month, Perplexity partnered with network provider Airtel to offer [free Perplexity Pro subscriptions](#). Google also dished up [a free AI Pro plan for India-based students for one year](#).

While OpenAI's move is not giving out any freebies, local and affordable pricing will likely result in a better subscription conversion rate for ChatGPT in India.

AI crawler Firecrawl raises \$14.5M, is still looking to hire agents as employees

Julie Bort — 4:00 AM PDT · August 19, 2025

IMAGE CREDITS: FIRECRAWL

Firecrawl’s co-founder and CEO Caleb Pepper knew the exact moment he found the investor to lead his Series A.

He was in a coffee meeting with Nexus Venture Partner’s Abhishek Sharma at the Blue Bottle in San Francisco’s South Park (a favorite VC haunt). While describing the future of the company, he was gesturing so animatedly that his chair tipped over.

“I actually fell out of my chair. And Abhishek, as a great Investor does, caught the chair and me as I was falling,” Pepper described with a laugh. That felt like a symbol for how the founder/investor relationship is supposed to work. “I think that was a clear signal that he was the right partner.”

On Tuesday, Firecrawl announced a Series A led by Nexus with participation from Shopify CEO Tobias Lütke and existing investor Y Combinator.

Firecrawl offers a popular open-source web crawler for developers and AI agents, with a commercially supported version available through API. It’s used by 350,000 developers, has nearly [50,000 stars](#) on GitHub and its notable customers include Shopify, Replit, and Zapier as well as “some of the largest hedge funds in the world,” Pepper told TechCrunch. And, he says, the company is already profitable.

The startup also just released an API that supports search and will soon add support for natural language prompts, as co-founder and CTO Nicolas Silberstein Camara noted.

Pepper, who co-founded Firecrawl in 2022 with Camara and CMO Eric Ciarla, said gaining Lütke as an investor was “the best kind of validation.”

They landed him through a gutsy email after discovering the Shopify founder had signed up to try their product through their self-service portal.

“We saw his email come in,” Peffer said. The Firecrawl crew immediately emailed him to welcome him as a customer, but got no response. Two months later, some Shopify folks contacted Firecrawl for an enterprise contract. So Peffer took his shot and emailed Lütke again, mentioning they'd love for him to participate in their upcoming round.

This time, Lütke responded with compliments about their product. He was in.

While AI web crawlers have [a somewhat dubious reputation these days](#), mostly due to bad actors [that ignore robot.txt files](#), they are also a necessary part of the burgeoning AI world. AI trains on the web, [agents need to access web pages to perform their duties](#), and enterprises need personalized crawlers to consume their own websites for training and operations.

The Firecrawl founders also hope to help address the frustrating parts of their industry. They are working on tools to help website owners, publishers, and other content creators “get paid when AI uses their content. We think this is the way it should be,” Peffer said.

While there have been lots of efforts around this idea from big names like [Adobe and Getty](#) as well as startups [like Bria](#),

[Calliope Networks](#), and others, Peffer feels that Firecrawl has an edge because it's already working with those who are scraping data.

"We already have one side of the marketplace," he said. "What we want to do is just connect that side of the marketplace to the website owners, the publishers."

Interestingly, Firecrawl also went viral a few months ago for reasons that have little to do with their open source tool. They had posted an [ad to the YC job board looking to hire an AI agent as an employee for a \\$15,000 salary](#) – perhaps the first job ad for an agent employee, ever.

That job search didn't yield an agent worth hiring, so Firecrawled upped the budget to up [\\$1 million to hire several agents and the developers who built them, and tried again](#). Applicants flooded in, Peffer said, but the company hasn't yet hired any. The founders realized that evaluating and managing wanna-be agent employees is a job in itself. So now they are looking for an AI chief of staff.

Firecrawl's Peffer will [be on stage at Disrupt in October](#) to discuss all that he's learned in a session that covers the pros and cons of hiring AI agents as early employees.
