How to build a GTM strategy that actually drives results at TechCrunch Disrupt 2025

Go-to-market is often where great startups stumble — but it doesn't have to be. At [TechCrunch Disrupt 2025](#) in San Francisco this October 27–29, GTM pros [Max Altschuler](#) and [Alison Wagonfeld](#) take the Builders Stage to show founders how to build a go-to-market engine that doesn't just support the product, but also scales with it.

IMAGE CREDITS: [TECHCRUNCH](#)

Lessons from leaders who've done it at scale

Max Altschuler has seen the go-to-market journey from just about every angle: as a founder ([Sales Hacker](#)), an operator ([Outreach](#)), and now as general partner of [GTMfund](#), where he backs the next generation of B2B SaaS startups.

Joining him is Alison Wagonfeld, CMO of [Google Cloud](#), where she leads global marketing across both Google Cloud Platform and Workspace. Between them, you get startup scrappiness and enterprise precision — the ideal combo for navigating the modern GTM landscape.

From pitch to playbook: What founders need to know

[This conversation](#) is built for early-stage founders and operators looking to turn good ideas into real growth. Expect a tactical dive into messaging, sales hires, demand gen, and the

Why Paradigm built a spreadsheet with an AI agent in every cell

Rebecca Szkutak — 8:00 AM PDT · August 18, 2025

Anna Monaco has been building AI agents since before the term “AI agents” was even a thing. After building numerous chatbots, she started looking for other types of interfaces that made sense for AI agents and landed on spreadsheets.

“I had this personal pattern, and I noticed that a lot of other people had this pattern, of putting very important CRM data in spreadsheets just because it was the most flexible thing,” Monaco told TechCrunch. “But it was actually a pain to maintain. There’s so much manual work involved. So [I] just went down this rabbit hole of building a product for myself and wanted to reimagine what a spreadsheet could look like with the full power of LLMs.”

The result was [Paradigm](#), an AI-powered spreadsheet equipped with more than 5,000 AI agents. Users can assign different prompts to individual columns and cells, and

Paradigm is now releasing its product to the public and announcing that it raised a \$5 million seed round led by General Catalyst. The company has raised \$7 million to date. Monaco said the funding will go toward executing on the company’s “extremely aggressive product roadmap.”

“The interesting thing that happened when we fundraised is some people we pitched just kept on using and paying for the

product,” Monaco said. “I think that was a cool part of it. We found a lot of value from it internally and our investors, not even just our investors — other investors that we talked to — are still using it.”

Paradigm isn’t the only company looking to give spreadsheets an AI upgrade. [Quadratic](#), which has raised more than \$6 million in venture funding, is a 3-year-old startup with a similar goal. Legacy companies like Google and Microsoft are also adding AI tools to their spreadsheet applications.

Monaco said that she doesn’t really consider the competition because Paradigm doesn’t think of itself as an AI-powered spreadsheet. She said she thinks of it as a new AI-powered workflow that happens to be in the familiar form of a spreadsheet but won’t necessarily stay that way forever.

“What I’m seeing in the most popular AI products now is this fine balance between present and future,” Monaco said. “How do you build something that is really powerful and generates a lot of value now but also sets you up really well for the future? That’s the question that I asked myself a year ago when I was starting the company.”

We’re always looking to evolve, and by providing some insight into your perspective and feedback into TechCrunch and our coverage and events, you can help us! Fill out [this survey](#) to let us know how we’re doing and get the chance to win a prize in return!

Eight Sleep raises \$100M to expand its AI-powered sleep tech

Kate Park — 3:00 AM PDT · August 19, 2025

Roughly [one in three adults in the U.S. regularly gets insufficient sleep](#), driving demand for tools that can monitor, analyze, and enhance rest. [Eight Sleep](#), founded in 2014, offers AI-powered sleep tech products that promise to transform your bed into a preventive health device.

The New York-based startup announced Tuesday that it raised a fresh \$100 million round from investors such as HSG, Valor Equity Partners, Founders Fund, Y Combinator and athletes including Ferrari F1 driver Charles Leclerc, and Zak Brown, who is the CEO of McLaren F1.

With this round, Eight Sleep has raised roughly \$260 million total, Pitchbook estimates. It previously raised an \$86 million

[Book Your Table >](#)

Series C in 2021 by investors who assigned it a [\\$500 million post-money valuation](#). Eight Sleep said its valuation has doubled since its last round, but didn't disclose specifics.

"If we successfully execute our AI roadmap, launch internationally, and develop condition-specific interventions, achieving unicorn status will naturally follow," Alexandra Zatarain, co-founder and CMO of Eight Sleep, told TechCrunch.

Eight offers smart mattresses that integrate software and AI to track and enhance sleep quality. Its flagship product, Pod, offers features like measuring sleep stages, heart rate, breathing patterns, and movement. Using these insights, it automatically adjusts temperature, elevation, and firmness. It can also detect snoring and automatically elevate the base in response, according to the company.

The company has generated more than \$500 million in Pod sales, expanded its revenue tenfold since launching the product in 2019, and collected insights from over one billion hours of recorded sleep data, it says.

Eight, which employs just over 100 full-time staff, is now expanding beyond the Pod with its Sleep Agent, an AI-driven system that leverages large language models to create thousands of digital twins for each user and predict outcomes, with the goal of optimizing nightly recovery. This approach shifts sleep technology from reactive tracking to proactive, personalized intervention, said Zatarain.

The sleep tech market features a range of competitors, from wearable devices such as Oura, Fitbit, and Apple, to medical-focused companies like ResMed, as well as smart mattress and sleep surface makers, including Sleep Number and ChiliSleep.

Eight's core differentiator, Autopilot, "builds a personal blueprint from night one, then adapts continuously, accounting for seasonality, travel, stress, training, illness, or even a bad night before. And it works independently for each side of the bed," Zatarain said.

The startup plans to use the new funding to accelerate its growth in the medical sector, building on the Pod's health-monitoring capabilities. With the introduction of Health Check, the system can monitor cardiovascular and respiratory patterns with up to 99% accuracy without the need for wearable devices, according to the company.

"We're not replacing your doctor, but we are giving you nightly, high-accuracy health monitoring so you can act early if trends shift. Over time, this data can complement medical care," Zatarain said.

Eight's recently launched [Hot Flash Mode](#) employs AI-driven cooling to relieve menopause symptoms. It is also working on contactless solutions for sleep apnea. The company is pursuing FDA approval and will utilize the Pod's real-time biometric monitoring to deliver personalized interventions.

Eight Sleep currently ships to over 30 countries—including Canada, the UK and EU nations, Australia, Mexico, and the UAE—and is now planning to expand into China. The CMO told TechCrunch that China, as one of the world's largest consumer markets, is seeing a rise in a health-conscious middle class that prioritizes sleep and overall wellness.

Regarding sensitive health data, Zatarain said the company complies with each locale's regulations, including for data storage.

"Privacy is foundational. All data is encrypted, never sold, and fully private. We comply with GDPR and CCPA, and unlike many devices, we don't use microphones. Our biometric sensors are embedded in the bed surface — no wearables, no invasiveness, just passive, high-accuracy insights," Zatarain said.
