Kodak denies it's shutting down amid media reports of financial struggles

Eastman Kodak is denying reports that it's shutting down.

On Wednesday, media outlets like [CNN](#) and [CNBC](#) detailed the company's ongoing financial challenges, including statements made in its earnings report that warned investors it didn't have "committed financing or available liquidity" to meet debt obligations coming due within 12 months.

However, Kodak quickly published a [press release](#) to counter these claims, noting it has "no plans to cease operations" or file for bankruptcy protection. Rather, it claims to have plans to "repay, extend, or refinance" its debt before the due date and expects to have a stronger balance sheet by early next year.

The company also offered an explanation of its financials, noting it will use \$300 million in cash it's receiving in December 2025 from its pension plan termination to address a large portion of its \$477 million in term debt. It will then address the remaining \$177 million in debt and another \$100 million in preferred stock outstanding.

Despite these clarifications on recent issues, the 133-year-old company has regularly struggled with finances as digital technology eclipsed film sales. Kodak [previously filed for bankruptcy](#) in 2012. In recent years, however, some Gen Z users have [embraced older tech](#), like [compact cameras](#) and [dumb phones](#), as a way to tap into nostalgia for a time they never got to experience.

We're always looking to evolve, and by providing some insight into your perspective and feedback into TechCrunch and our coverage and events, you can help us! [Fill out this survey to let us know how we're doing](#) and get the chance to win a prize in return!

CPG startup Keychain snags \$30M to build in India, grow in the U.S.

Jagmeet Singh — 7:00 AM PDT · August 19, 2025

Keychain, a U.S. startup that helps consumer brands find manufacturing partners, has raised \$30 million in fresh funding as it looks to scale its India-based development team to drive growth in North America.

While headquartered in New York, Keychain operates as a distributed company with its core engineering and product development centered in India. The startup is doubling down on this model with the new funding, aiming to grow its engineering, product design, and analytics teams in Gurugram from 35 to 70 in the coming months, and to around 100 within a year. This India-based team already represents half of Keychain’s 70-person global headcount, with about 20 employees in New York and the remainder in Austin, handling partnerships, go-to-market, and sales.

The strategy is deliberate. Despite only serving Western markets, Keychain has built its primary development operations in in Gurugram — which is the country’s second-largest tech hub after Bengaluru — to develop its consumer packaged goods (CPG) platform for clients in North America. The software platform already helps eight of the top 10 retailers, including 7-Eleven and Whole Foods, and seven of the top CPG brands, such as General Mills, connect with potentially suitable manufacturers, according to the startup. So why India?

“It’s the talent, depth, availability, and the speed with which you can access talent of that depth and availability [in India],” said Oisín Hanrahan, co-founder and CEO of Keychain, in an interview.

Hanrahan co-founded Keychain in 2023 with Umang Dua — his co-founder at Handy, a home services software startup later acquired by Angi — and Jordan Weitz. Dua, who is originally from New Delhi, has been a “natural advantage” in building Keychain’s core teams in Gurugram, Hanrahan said.

Both Hanrahan and Dua spent time structuring Keychain's teams across India and the U.S., ultimately choosing India as the company's engineering hub. The decision was shaped by their experience at Handy and Angi, where they found it challenging to build a "sustainable, enduring" engineering team in the U.S.

"We've thought about engineering as: how do we build a core, sustainable engineering organization that can get to scale reasonably quickly, that has endurance, that's got deep talent pools, and AI exposure that can take on real, important challenges, that's commercially minded? And we looked at where we had those teams before, when we were at Handy and Angi, and obviously, India is just an amazing location and really checks a lot of those boxes," Hanrahan told TechCrunch.

Tech and VC heavyweights join the Disrupt 2025 agenda

Several U.S. startups, [especially those developing SaaS solutions](#), base their engineering and product teams in cities like Bengaluru, Gurugram, and Noida. In recent months, the country has also seen a [wave of multinational companies establishing offshore hubs](#), often referred to as global capability centers. But unlike most of these firms — which also target Indian consumers even as many say [India is harder to sell into](#) — Keychain stands apart. It more closely resembles companies like the UK's [Deliveroo](#) and Southeast Asia's [Gojek](#) and [Grab](#) — all of which tap into India's tech talent for product

development and R&D without having a market presence in the country.

“India’s position as a global technology hub has made it a compelling destination for product development, even for startups that have no direct business in the country,” said Neha Singh, co-founder of the Bengaluru-based private market intelligence platform Tracxn, in an interview with TechCrunch.

India’s time zone also allows teams to work beyond U.S. hours, enabling near-continuous development cycles, Singh added.

KeychainOS as the next big thing coming from Indian talent

Keychain plans to use its India team not only to improve its current platform — launched in February 2024 and used by over 20,000 brands and retailers to find manufacturing partners — but also to build new AI-powered software that helps manufacturers manage their product cycles more efficiently and with better oversight.

Called KeychainOS, the software will have four modules, with the first one already available. This module helps manufacturers comply with their food safety requirements, using AI to take quantitative data and convert it into a qualitative report that can be shared with auditors. The software can also pull data using natural language when an auditor requests a specific insight, Hanrahan told TechCrunch.

The other three modules of the software will focus on purchasing and procurement, inventory, and production planning, the executive noted.

The OS offering will compete with traditional ERP systems like Oracle, QAD, and Plex, which require add-ons like TraceGains and Redzone to be usable for manufacturers, the startup said.

In addition to its KeychainOS for manufacturers, Keychain has embedded AI into its search and discovery layer to help retailers quickly find relevant third-party manufacturers for their products.

KEYCHAIN'S SEARCH AND DISCOVERY LAYER WITH AN AI INTEGRATION

IMAGE CREDITS:KEYCHAIN

Keychain already helps brands and retailers find third-party manufacturers in food, beverage, supplements, health, and beauty categories and is looking to expand its platform to pet and household products later this year.

Currently, the startup serves businesses in the U.S. and Canada and is [aiming to enter Europe](#) later this year.

While the startup offers its software free to brands and retailers, manufacturers pay to access the platform and get discovered. KeychainOS provides them with another reason to engage.

Keychain already has over 30,000 manufacturers on its platform, with “hundreds and hundreds” paying to use it. These customers pay anywhere from \$10,000 to over \$100,000, Hanrahan said, adding that the startup earns around \$20,000 per manufacturer annually on average.

Keychain’s Series B round was led by Wellington Management and existing investor BoxGroup, alongside other existing investors. With this funding, the startup has raised \$68 million in total. Of that, Hanrahan told TechCrunch that the startup still has over \$50 million in the bank.

The startup had a post-money valuation of \$260 million in its last round of \$15 million in November 2024. Hanrahan did not disclose the current valuation but said it was a “good step up.”

TikTok’s latest feature lets college students find and connect with classmates

Aisha Malik — 6:00 AM PDT · August 19, 2025

their college name and graduation year will be displayed on their profile.

Users can then browse their school’s page, filter by graduation year, and view all of the users who have added the school to their profile. They can also sort the users list to show the most-followed users first.

IMAGE CREDITS:TIKTOK

The feature is available across more than 6,000 universities through TikTok’s partnership with [UNiDAYS](#), a student verification platform that confirms student status.

TikTok says the idea behind the feature is to turn its platform into a hub for real-world connections and belonging on campus, which is essentially what Facebook’s original mission was when it launched in 2004 as a way for Harvard students to connect with one another.

TikTok’s new feature could be a welcome addition for college students looking to connect with others on campus. However, it also raises concerns about digital privacy, as it could make it easier for users to track others online. Of course, the feature is optional, so those who prefer to keep their TikTok presence separate from their student life can choose to simply not add their school to their profile.

Nvidia said to be developing new, more powerful AI chip for sale in China

Ram Iyer — 5:58 AM PDT · August 19, 2025

IMAGE CREDITS:

AKIO KON/BLOOMBERG / GETTY IMAGES

The world's most valuable chipmaker is far from giving up its desire to retain China as a key growth market. Nvidia is apparently putting together a new AI chip meant for sale in China that's half as powerful as its flagship B300 Blackwell GPU, Reuters [reported](#), citing anonymous sources.

This new chip, codenamed B30A, would be more powerful than the H20 GPUs the company is currently allowed to sell to China, the report said, though its design will be single-die in nature, unlike the dual-die design used in the more powerful B300 GPUs. The B30A would still have similar features to the H20, like fast data transmission, support for NVLink, and high-bandwidth memory.

The development of the B30A seems to be separate from [another chip](#) that the company is said to be developing for sale in the country, Reuters reported.

Put your brand in front of 10,000+ tech and VC leaders across all three days of Disrupt 2025. Amplify your reach, spark real connections, and lead the innovation charge. Secure your exhibit space before your competitor does.

“We evaluate a variety of products for our roadmap, so that we can be prepared to compete to the extent that governments allow. Everything we offer is with the full approval of the applicable authorities and designed solely for beneficial commercial use,” Nvidia said in an emailed statement.

The news comes as the Trump administration in recent weeks has [relaxed its stance](#) on letting chipmakers export high-performance AI chips to China, though Reuters cited its sources as saying that approvals for this new chip aren’t certain at all.

As geopolitical tensions between Beijing and Washington are increasingly affected by the race to develop AI, critics [argue](#) that the U.S. must maintain its lead by controlling the supply of necessary technology to China. But Nvidia and its peers — finding themselves [selling the equivalent of shovels during a gold rush](#) — maintain that ceding the valuable market of China to rivals like Huawei would be tantamount to giving up entirely.

We’re always looking to evolve, and by providing some insight into your perspective and feedback into TechCrunch and our coverage and events, you can help us! Fill out [this survey](#) to let us know how we’re doing and get the chance to win a prize in return!
