Made by Google 2025: How to watch Google debut the Pixel 10, Pixel Watch 4, and more

Google is scheduled to host its Made by Google event, [broadcast on its Made by Google YouTube channel](#), at 10 a.m. PT Wednesday. The tech giant is anticipated to [unveil the new Pixel 10 series](#), and we'll also likely see the Pixel Watch 4, new earbuds, and possibly AI features.

Before the event starts, the video will also be embedded here in this article. As usual, TechCrunch will provide updates as they happen.

The main attraction is expected to be the new Pixel 10 series, which will include the standard model, the Pixel 10 Pro, the Pixel 10 Pro XL, and the foldable Pixel 10 Pro Fold.

There are also rumors that Google will reveal the Pixel Watch 4, which could feature longer battery life and faster charging. New earbuds, such as a refreshed Pixel Buds 2a, might also be on the horizon.

Additionally, we may get more AI features for the Pixel 10 as Google ramps up its efforts to focus [on its family of Gemini models](#).

Pixel 10, AI capabilities, and everything else we expect out of the Made by Google 2025 event

As anticipation builds for the [Made by Google 2025 event](#), there's a buzz around the Pixel 10 series arriving notably before the [iPhone 17](#). Apple's [hardware event](#) is expected to take place in September.

The tech giant has made its intentions clear to grow the Pixel line, likely incorporating more generative AI capabilities with Gemini. Made by Google starts at 10 a.m. PT on Wednesday.

Get ready for a Gemini boost

IMAGE CREDITS: THOMAS FULLER/SOPA IMAGES/LIGHTROCKET / GETTY IMAGES

Google already dropped several AI-related updates at its [developer conference](#) in May, but the company will likely demonstrate more Gemini features during the Pixel 10 event. In a recent [YouTube video](#) promoting the new devices, Google even seemed to poke fun at Apple's failed promises with Apple Intelligence advancements on the iPhone.

[Rumors](#) are buzzing about a feature called "Camera Coach," which would let Gemini give you real-time tips for taking better photos. The AI is supposedly able to see what's going on and suggest the best angles and lighting for your shot.

Google Pixel 10 | Soon

Advertisement

Pixel 10, 10 Pro, and 10 Pro XL

The standard Pixel 10 phone is expected to undergo significant changes, particularly with the addition of a dedicated telephoto lens, a feature that was previously exclusive to the Pro models. Following the leak of renders showcasing the third rear lens, [Google released a teaser for the Pixel 10](#), confirming the substantial camera upgrade.

Additionally, all phones in the lineup are expected to be powered by a new Tensor G5 processor, ushering in the Gemini era and enhancing performance and power efficiency compared to the Tensor G4 chip.

IMAGE CREDITS:GOOGLE

Aside from these updates, not many obvious changes appear to be on the table. The basic design of the phones will likely remain similar to that of the Pixel 9 series. The displays are also expected to stay the same, with the Pixel 10 and Pixel 10 Pro featuring a 6.3-inch display, and the Pixel 10 Pro XL with a larger 6.8-inch display.

Some areas where the Pro models may see improvement are camera and video quality, along with battery size, which could allow for faster charging and could address the longevity gap between Pixel and flagship phones from Apple and Samsung.

Plus, there is talk that the Pixel 10 series could support [Qi2 wireless charging](#). If true, this means it would be one of the few Android phones to work with magnetic accessories, such as chargers, wallets, and mounts. Google is also reportedly launching a “Pixelsnap” phone case with a magnetic ring in the center.

Pixel 10 Pro Fold

As for Google’s upcoming foldable, there are rumors suggesting it’ll have a larger cover display, measuring at around 6.4 inches, alongside an 8-inch main screen. Additionally, Google is reportedly enhancing the strength of the hinge, and the bezels are expected to be thinner for a sleek appearance.

Another exciting rumor is the possibility of an [IP68 rating](#), a first for the device. (And according to leaked specs, [this may in fact be coming](#).) This means it can stand up to both dust and water, whereas the Pixel 9 Pro Fold has zero dust protection.

... pic.twitter.com/iJdzBRaDgK

Like the other Pixel 10 phones, the Pro Fold will likely be powered by the new G5 chip and include the latest Gemini AI features. The camera system might also receive improvements, potentially featuring a 48-megapixel ultra-wide lens and a telephoto lens with 5x optical zoom. The phone should also likely get a bump in battery life.

The Pixel 10 may come in Moonstone and Jade colors.

The Pixel Watch and Pixel Buds

IMAGE CREDITS:GOOGLE

Wearables will also get their time to shine at Google’s event, with the Pixel Watch 4 rumored to get a thicker design, a longer battery life, and smaller bezels.

There’s also a strong likelihood that the smartwatch will introduce new health and fitness-tracking capabilities, possibly including an upgraded [blood oxygen \(SpO2\) monitoring](#) function.

[Leaks](#) of the Pixel Buds 2a indicate that the earbuds will come in new colors (Fog Light, Hazel, Iris, and Strawberry) along with [features](#) like active noise cancellation. The Pixel Buds Pro 2 will also reportedly come in a new Sterling color.

This story has been updated to include additional rumors.

iPhone 17, the ‘thinnest iPhone ever,’ and everything else we’re expecting out of Apple’s hardware event

Apple usually announces its new hardware in the fall, and this year is likely no different. The event is reported to be on September 9, and Apple is expected to release its iPhone 17 lineup, along with updates for the Apple Watch and AirPods.

As always, there are many rumors circulating, including bigger screens and improved cameras for the iPhone 17 models and the introduction of an ultra-thin iPhone Air that could replace the Plus model.

iPhone 17, 17 Pro, and 17 Pro Max

The iPhone 17 is expected to get a significant makeover to align more closely with the Pro models. It could feature a slightly larger [6.3-inch screen](#), which is an increase of 0.2 inches compared to the iPhone 16, as well as a [120Hz display](#), a substantial upgrade from the current 60Hz. It's also rumored to have a 24-megapixel front camera. It could also come in new colors: purple and green.

iPhone 17: Purple and Green Colors in Testing as Potential New Shade for 2025

Full Article: <https://t.co/jZJJoUHBsf> [pic.twitter.com/1in8R6dDa5](https://t.co/pic.twitter.com/1in8R6dDa5)

— Majin Bu (@MajinBuOfficial) [June 20, 2025](#)

The Pro's upgrades will be noticeable on the back of the phone, rumors suggest. [Conceptual renderings](#) show that the three rear cameras may be arranged in a rectangular bar that extends from one edge of the device to the other. The flash, light sensor, and microphone would be positioned far to the right side. Where the MagSafe charger is, the Apple logo is said to be centered for aesthetic reasons.

Notably, the iPhone 17 Pro may switch materials, potentially replacing the titanium band around the screen with aluminum. This could help Apple reduce costs as well as provide a lighter feel.

Made by Google 2025: How to watch Google debut the Pixel 10, Pixel Watch 4, and more

Lauren Forristal

- 23 hours ago

The iPhone 17 Pro Max is expected to see fewer upgrades, too, with the most significant change being a slightly thicker body, likely to accommodate a larger battery — which would be a huge win.

According to [leaker Instant Digital](#), the iPhone 17 is predicted to be priced around \$800, and the Pro Max is expected to have a price tag of \$1,250. New colors for the Pro models potentially include [dark blue and copper](#).

Tech and VC heavyweights join the Disrupt 2025 agenda

Netflix, ElevenLabs, Wayve, Sequoia Capital, Elad Gil — just a few of the heavy hitters joining the Disrupt 2025 agenda. REGISTER NOW

The Pro model is expected to be priced around \$1,050. However, a [recent leak](#) indicates that there will be fewer storage options compared to the 16 Pro. Users may lose the 128GB option and will only have three choices: 256GB, 512GB, or 1TB, down from the typical four options.

iPhone Air

The most widely discussed rumor is that Apple might be introducing its slimmest phone ever, [the iPhone Air](#), which may replace the iPhone Plus.

This rumored device is said to have a profile thickness of 5.5 mm, making it about 0.08 inches thinner than current iPhones. It'll also feature a 6.6-inch screen.

This move appears to be Apple's response to the trend of slimmer smartphones, following in the footsteps of other companies like Samsung and Huawei. The iPhone Air could potentially outshine the Samsung Galaxy S25 Edge, which measures 5.8 mm thick. Additionally, it may pave the way for [Apple's long-rumored foldable phone](#), predicted to launch in September 2026.

While the thin design is stylish, it would come with some compromises. Based on the [renders](#) we've seen, the Air is expected to have only one rear camera lens, unlike the Plus, which has two. There are also [rumors](#) that there may not be enough space for a speaker at the bottom, meaning the only audio source could be the front earpiece at the top.

Reports suggest the device will be priced at \$950 and will be available in black, silver, and light gold.

Apple Watch Series 11, Ultra 3, and SE 3

IMAGE CREDITS: APPLE

After a two-year wait, there are various rumors surrounding the Apple Watch Ultra 3, suggesting it will undergo significant changes. These may include faster charging speeds, 5G

support, and satellite connectivity. Additionally, it's speculated that the watch will feature a [larger display](#).

One of the most exciting potential upgrades for both the Ultra 3

and Series 11 is the introduction of a plastic version, which has

Latest
Security

Newsletters

continue to be reports of a plastic version being introduced, according to Gurman.

Rumored prices for the watches are: \$250 for the Apple Watch SE 3, \$400 for the Series 11, and \$800 for the Ultra 3.

AirPods Pro 3

IMAGE CREDITS: APPLE

After the release of the AirPods Pro 2 in 2022, it's about time for an upgrade, and Apple might just be ready to deliver. [Rumors](#)

suggest that the AirPods Pro 3 will feature a sleeker design, touch-sensitive controls, smaller earbuds, and a slimmer case. Additionally, the H3 chip is expected to enhance active noise cancellation and adaptive audio.

This story has been updated to include additional rumors.

APPS

Hank Green's Focus Friend app is climbing the App Store charts — and it's extremely cute

You must stay focused. You cannot open TikTok, or Instagram, or whatever little phone games you like to play. If you fail, you will make an anthropomorphic bean very sad, because its knitting project depends on your ability to stay focused.

This is the premise of [Focus Friend](#), a productivity app created by [Honey B Games](#) and [Hank Green](#), the longtime online creator/entrepreneur/educator/[sock salesman](#). Though the app was soft launched last month, Focus Friend is only now gaining momentum on the App Store charts — likely because Green and his brother, author John Green, are [posting about it more](#) — reaching No. 4 among all free apps and No. 2 among productivity apps.

IMAGE CREDITS: FOCUS FRIEND

[@hankgreen1](#)

Your Deserve a Focus Friend

[🎵 original sound – Hank Green](#)

Focus Friend, which is available on [iOS](#) and [Android](#), has the bones of a typical productivity app. It invites you to set a timer on your phone, which will temporarily prevent you from opening certain apps (on iOS, the “Deep Focus Mode” setting connects to your own screen time settings, where you can designate which apps to block).

But what makes Focus Friend different is that it assigns you a new friend — a little bean — which you can give a cute name, like Garbanzo, or Susan Bean Anthony, or Eda (it’s short for Edamame).

Your bean needs help focusing on its knitting. And it can only focus if you refrain from opening the apps that distract you from your work. If you successfully complete your focus session, your bean will give you in-game points (socks), which you can use to buy decorations for its room — because the only thing more

motivating than helping a bean knit is to buy it a cute poster for its wall.

■ Why I finally left Spotify

Focus Friend has a lot in common with [Finch](#), a popular self-care app that incentivizes users to maintain healthy habits by giving them a virtual bird companion. Your bird grows when you complete certain tasks that you set for yourself, like drinking water, brushing your teeth, or cleaning your room. Like the Tamagotchis of yore, these apps exploit our desire to protect a cute bundle of pixels by doing stuff that’s good for us.

Focus Friend is functional as a free app, but you can pay to give your bean different skins — you can make your bean look like a cat (a “Kitt-ney Bean”) or a jelly bean, for example. There’s also a subscription that allows your bean to knit scarves, which can be exchanged for premium decorations. Green [posted](#) on Bluesky that Focus Friend is “very much trying to be an ad-free experience because the mobile ad ecosystem kinda blows.” But the app still has to make money to compensate the employees who brought our beans to life.
