Pebble's smartwatch is back: Pebble Time 2 specs revealed

Eric Migicovsky, the original creator of the Pebble smartwatch, on Wednesday showed off the new designs for the upcoming watch, now known as the [Pebble Time 2](#).

Although the company originally branded its new watches as the Core 2 Duo and Core Time 2 when it first announced its plans to return to the market in March, Migicovsky says the company has since been able to regain the Pebble trademark.

That means the new watches will instead be called the Pebble 2 Duo and the Pebble Time 2.

Migicovsky's company, IMAGE CAPTION: CORE DEVICES Core Devices, had also shown off early ideas for the watches back in March, but today it's revealing the final design for the Pebble Time 2.

DISRUPT

October 27-29, 2025 | San Francisco

Put your brand in front of 10,000+ tech and VC leaders across all three days of Disrupt 2025. Amplify your reach, spark real connections, and lead the innovation charge. Secure your exhibit space before your competitor does.

The industrial design of the watch has changed, and a handful of new features have been added, notes Migicovsky [in a blog post](#).

The Time 2 will debut in four colors, still yet to be determined; Pebble buyers will have input later on, the company says. Plus, the company is adding a multicolor RGB LED backlight, a second microphone (to aid with a potential environmental noise-cancellation feature), a compass sensor, and a screw-mounted back cover.

The watch will be stainless steel on the front and back and will feature stainless steel buttons like the older [Pebble Time Steel](#).

Pebble Time 2 Design Reveal!

Other previously announced specs will remain the same, including Pebble's plans for a 1.5-inch 64 color e-paper display, a touch screen, a quick-release 22 mm watch strap, a flat hardened glass lens, a 30-day estimated battery life, a heart rate monitor, step and sleep tracking, a speaker, a linear actuator motor (for vibration), and a waterproof rating of some sort, which is yet to be determined.

The Pebble Time 2 is available for preorder for \$225 and will pair with a smartphone via Bluetooth, allowing it to display notifications, control the music on your phone, and connect with the internet.

The company also noted that people who preorder the Core 2 Duo can upgrade to [the Pebble Time 2](#) while reserving their place in line. To do so, customers shouldn't cancel the original order, but instead wait for an email survey link that will be sent in the next month or so, offering the option for them to catch their order.

Google Pixel 10 | Soon

Pixel 10, 10 Pro, and 10 Pro XL

The standard Pixel 10 phone is expected to undergo significant changes, particularly with the addition of a dedicated telephoto lens, a feature that was previously exclusive to the Pro models. Following the leak of renders showcasing the third rear lens, [Google released a teaser for the Pixel 10](#), confirming the substantial camera upgrade.

Additionally, all phones in the lineup are expected to be powered by a new Tensor G5 processor, ushering in the Gemini era and enhancing performance and power efficiency compared to the Tensor G4 chip.

Aside from these updates, not many obvious changes appear to be on the table. The basic design of the phones will likely remain similar to that of the Pixel 9 series. The displays are also expected to stay the same, with the Pixel 10 and Pixel 10 Pro featuring a 6.3-inch display, and the Pixel 10 Pro XL with a larger 6.8-inch display.

Some areas where the Pro models may see improvement are camera and video quality, along

As for Google's upcoming foldable, there are rumors suggesting it'll have a larger cover display, measuring at around 6.4 inches, alongside an 8-inch main screen. Additionally, Google is reportedly enhancing the strength of the hinge, and the bezels are expected to be thinner for a sleek appearance.

Another exciting rumor is the possibility of an [IP68 rating](#), a first for the device. (And according to leaked specs, [this may in fact be coming](#).) This means it can stand up to both dust and water, whereas the Pixel 9 Pro Fold has zero dust protection.

... pic.twitter.com/iJdzbRaDgK

Like the other Pixel 10 phones, the Pro Fold will likely be powered by the new G5 chip and include the latest Gemini AI features. The camera system might also receive improvements, potentially featuring a 48-megapixel ultra-wide lens and a telephoto lens with 5x optical zoom. The phone should also likely get a bump in battery life.

The Pixel 10 may come in Moonstone and Jade colors.

The Pixel Watch and Pixel Buds

IMAGE CREDITS:GOOGLE

Wearables will also get their time to shine at Google's event, with the Pixel Watch 4 rumored to get a thicker design, a longer battery life, and smaller bezels.

There's also a strong likelihood that the smartwatch will introduce new health and fitness-tracking capabilities, possibly including an upgraded [blood oxygen \(SpO2\) monitoring](#) function.

[Leaks](#) of the Pixel Buds 2a indicate that the earbuds will come in new colors (Fog Light, Hazel, Iris, and Strawberry) along with [features](#) like active noise cancellation. The Pixel Buds Pro 2 will also reportedly come in a new Sterling color.

This story has been updated to include additional rumors.

iPhone 17, the ‘thinnest iPhone ever,’ and everything else we’re

expecting out of Apple's hardware event

Lauren Forristal — 9:20 AM PDT · August 18, 2025

Apple usually announces its new hardware in the fall, and this year is likely no different. The event is reported to be on September 9, and Apple is expected to release its iPhone 17 lineup, along with updates for the Apple Watch and AirPods.

As always, there are many rumors circulating, including bigger screens and improved cameras for the iPhone 17 models and the introduction of an ultra-thin iPhone Air that could replace the Plus model.

IMAGE CREDITS: CHENG XIN / GETTY IMAGES

iPhone 17, 17 Pro, and 17 Pro Max

The iPhone 17 is expected to get a significant makeover to align more closely with the Pro models. It could feature a slightly larger [6.3-inch screen](#), which is an increase of 0.2 inches compared to the iPhone 16, as well as a [120Hz display](#), a substantial upgrade from the current 60Hz. It's also rumored to have a 24-megapixel front camera. It could also come in new colors: purple and green.

iPhone 17: Purple and Green Colors in Testing as Potential New Shade for 2025

— Majin Bu (@MajinBuOfficial) [June 20, 2025](#)

The Pro's upgrades will be noticeable on the back of the phone, rumors suggest. [Conceptual renderings](#) show that the three rear cameras may be arranged in a rectangular bar that extends from one edge of the device to the other. The flash, light sensor, and microphone would be positioned far to the right side. Where the MagSafe charger is, the Apple logo is said to be centered for aesthetic reasons.

Notably, the iPhone 17 Pro may switch materials, potentially replacing the titanium band around the screen with aluminum. This could help Apple reduce costs as well as provide a lighter feel.

The iPhone 17 Pro Max is expected to see fewer upgrades, too, with the most significant change being a slightly thicker body, likely to accommodate a larger battery — which would be a huge win.

According to [leaker Instant Digital](#), the iPhone 17 is predicted to be priced around \$800, and the Pro Max is expected to have a price tag of \$1,250. New colors for the Pro models potentially include [dark blue and copper](#).

The Pro model is expected to be priced around \$1,050. However, a [recent leak](#) indicates that there will be fewer storage options compared to the 16 Pro. Users may lose the 128GB option and will only have three choices: 256GB, 512GB, or 1TB, down from the typical four options.

iPhone Air

IMAGE CREDITS: APPLE TRACK

The most widely discussed rumor is that Apple might be introducing its slimmest phone ever, [the iPhone Air](#), which may replace the iPhone Plus.

This rumored device is said to have a profile thickness of 5.5 mm, making it about 0.08 inches thinner than current iPhones. It'll also feature a 6.6-inch screen.

This move appears to be Apple's response to the trend of slimmer smartphones, following in the footsteps of other companies like Samsung and Huawei. The iPhone Air could potentially outshine the Samsung Galaxy S25 Edge, which measures 5.8 mm thick. Additionally, it may pave the way for [Apple's long-rumored foldable phone](#), predicted to launch in September 2026.

While the thin design is stylish, it would come with some compromises. Based on the [renders](#) we've seen, the Air is expected to have only one rear camera lens, unlike the Plus, which has two. There are also [rumors](#) that there may not be enough space for a speaker at the bottom, meaning the only audio source could be the front earpiece at the top.

Reports suggest the device will be priced at \$950 and will be available in black, silver, and light gold.

Apple Watch Series 11, Ultra 3, and SE 3

After a two-year wait, there are various rumors surrounding the Apple Watch Ultra 3, suggesting it will undergo significant changes. These may include faster charging speeds, 5G support, and satellite connectivity. Additionally, it's speculated that the watch will feature a [larger display](#).

One of the most exciting potential upgrades for both the Ultra 3 and Series 11 is the incorporation of blood pressure monitoring capabilities. This feature would notify users if their blood pressure levels are too high or too low. Apple is also considering adding a sleep apnea feature. However, according to Bloomberg's Mark Gurman, the company [may need to delay the release of these features for further tweaks](#).

Apple recently announced that a [redesigned blood oxygen feature](#) is rolling out to some Series 8, 10, and Ultra watches. This leads us to think the Ultra 3 may also get the capability, but the company didn't mention if it would be available in the watchOS 26 in its announcement.

The third generation of Apple Watch SE isn't expected to receive major updates, aside from possibly a larger display. There continue to be reports of a plastic version being introduced, according to Gurman.

Rumored prices for the watches are: \$250 for the Apple Watch SE 3, \$400 for the Series 11, and \$800 for the Ultra 3.

AirPods Pro 3

IMAGE CREDITS:APPLE

After the release of the AirPods Pro 2 in 2022, it's about time for an upgrade, and Apple might just be ready to deliver. [Rumors](#) suggest that the AirPods Pro 3 will feature a sleeker design, touch-sensitive controls, smaller earbuds, and a slimmer case. Additionally, the H3 chip is expected to enhance active noise cancellation and adaptive audio.

This story has been updated to include additional rumors.

We're always looking to evolve, and by providing some insight into your perspective and feedback into TechCrunch and our coverage and events, you can help us! Fill out [this survey](#) to let us know how we're doing and get the chance to win a prize in return!
