SoftBank makes \$2B investment in Intel

A portrait of Masayoshi Son, Chairman and CEO of SoftBank Group, wearing glasses and a suit.

Japanese conglomerate SoftBank has agreed to make a \$2 billion investment in Intel in a deal described as a commitment to advanced technology and semiconductors in the United States.

The agreement, in which SoftBank will buy Intel common stock, was announced Monday after markets closed. SoftBank will pay \$23 per share of Intel common stock. Shares of Intel, which closed at \$23.66, popped more than 5% in after-hours trading.

SoftBank Group Chairman and CEO Masayoshi Son said in a statement that the “strategic investment reflects our belief that advanced semiconductor manufacturing and supply will further expand in the United States, with Intel playing a critical role.”

The investment provides validation for Intel, which has been overshadowed in recent years by competitors like Nvidia. It also reflects SoftBank's renewed interest in the U.S., particularly around AI chips. SoftBank recently purchased a factory in Lordstown, Ohio, owned by Foxconn, as part of a plan to build AI data centers.

Intel, steered by new CEO Lip-Bu Tan, is in the midst of a restructuring that aims to streamline the semiconductor business and focus on its core client and data center portfolio. Earlier this summer, Intel shuttered its automotive architecture business and laid off most of its staff. It also announced plans to reduce its Intel Foundry division workforce between 15% and 20%.

Tan has also had to navigate political landmines in recent weeks as President Donald Trump called for his resignation due to conflicts of interest — an accusation that was made without evidence — and his administration reportedly had discussions to take a stake in Intel.

The SoftBank-Intel deal comes just days after the Trump administration threatened new tariffs on imported semiconductor chips as part of his strategy to boost domestic production.

An advertisement for Mercury featuring a surfer riding a large, colorful wave. The text "MERCURY" is at the top, followed by "It's more than banking." and "It's reading the break from one dashboard." at the bottom. A small disclaimer at the very bottom states: "Mercury is a financial technology company, not a bank. Banking services provided through Choice Financial Group, Column N.A., and Evolve Bank & Trust; Members FDIC."

US spy chief says UK has dropped its Apple backdoor demand

Lorenzo Franceschi-Bicchierai

7:25 AM PDT · August 19, 2025

The U.K. has dropped its demand for special access to Apple’s cloud systems, or a “backdoor,” following negotiations with the Trump administration, according to U.S. National Intelligence Director **Tulsi Gabbard**.

“As a result, the U.K. has agreed to drop its mandate for Apple to provide a ‘back door’ that would have enabled access to the protected encrypted data of American citizens and encroached on our civil liberties,” [Gabbard wrote in a post on X](#). She also claimed that she worked along President Donald Trump and Vice President JD Vance in the negotiations.

Over the past few months, I’ve been working closely with our partners in the UK, alongside [@POTUS](#) and [@VP](#), to ensure Americans' private data remains private and our Constitutional rights and civil liberties are protected.

As a result, the UK has agreed to drop its mandate for...

— DNI Tulsi Gabbard (@DNIGabbard) [August 19, 2025](#)

This is the latest (and unexpected) development in a months-long saga that saw the British government secretly demanding Apple grant its authorities access — essentially asking for a [backdoor](#) — to the encrypted data of iCloud users, effectively anywhere in the world, particularly those who turn

CPG startup Keychain snags \$30M to build in India, grow in the U.S.

Jagmeet Singh — 7:00 AM PDT · August 19, 2025

Keychain, a U.S. startup that helps consumer brands find manufacturing partners, has raised \$30 million in fresh funding as it looks to scale its India-based development team to drive growth in North America.

While headquartered in New York, Keychain operates as a distributed company with its core engineering and product development centered in India. The startup is doubling down on this model with the new funding, aiming to grow its engineering, product design, and analytics teams in Gurugram from 35 to 70 in the coming months, and to around 100 within a year. This India-based team already represents half of Keychain's 70-person global headcount, with about 20 employees in New York and the remainder in Austin, handling partnerships, go-to-market, and sales.

The strategy is deliberate. Despite only serving Western markets, Keychain has built its primary development operations in Gurugram — which is the country's second-largest tech hub after Bengaluru — to develop its consumer packaged goods (CPG) platform for clients in North America. The software platform already helps eight of the top 10 retailers, including 7-Eleven and Whole Foods, and seven of

the top CPG brands, such as General Mills, connect with potentially suitable manufacturers, according to the startup. So why India?

“It’s the talent, depth, availability, and the speed with which you can access talent of that depth and availability [in India],” said Oisin Hanrahan, co-founder and CEO of Keychain, in an interview.

Hanrahan co-founded Keychain in 2023 with Umang Dua — his co-founder at Handy, a home services software startup later acquired by Angi — and Jordan Weitz. Dua, who is originally from New Delhi, has been a “natural advantage” in building Keychain’s core teams in Gurugram, Hanrahan said.

KEYCHAIN CO-FOUNDERS JORDAN WEITZ, OISIN HANRAHAN, AND UMANG DUA (LEFT TO RIGHT)

IMAGE CREDITS:KEYCHAIN

Both Hanrahan and Dua spent time structuring Keychain’s teams across India and the U.S., ultimately choosing India as the company’s engineering hub. The decision was shaped by their experience at Handy and Angi, where they found it challenging to build a “sustainable, enduring” engineering team in the U.S.

“We’ve thought about engineering as: how do we build a core, sustainable engineering organization that can get to scale reasonably quickly, that has endurance, that’s got deep talent pools, and AI exposure that can take on real, important challenges, that’s commercially minded? And we looked at where we had those teams before, when we were at Handy and Angi, and obviously, India is just an amazing location and really checks a lot of those boxes,” Hanrahan told TechCrunch.

India’s time zone also allows teams to work beyond U.S. hours, enabling near-continuous development cycles, Singh added.

KeychainOS as the next big thing coming from Indian talent

Keychain plans to use its India team not only to improve its current platform — launched in February 2024 and used by over 20,000 brands and retailers to find manufacturing

partners — but also to build new AI-powered software that helps manufacturers manage their product cycles more efficiently and with better oversight.

Called KeychainOS, the software will have four modules, with the first one already available. This module helps manufacturers comply with their food safety requirements, using AI to take quantitative data and convert it into a qualitative report that can be shared with auditors. The software can also pull data using natural language when an auditor requests a specific insight, Hanrahan told TechCrunch.

The other three modules of the software will focus on purchasing and procurement, inventory, and production planning, the executive noted.

The OS offering will compete with traditional ERP systems like Oracle, QAD, and Plex, which require add-ons like TraceGains and Redzone to be usable for manufacturers, the startup said.

In addition to its KeychainOS for manufacturers, Keychain has embedded AI into its search and discovery layer to help retailers quickly find relevant third-party manufacturers for their products.

KEYCHAIN'S SEARCH AND DISCOVERY LAYER WITH AN AI INTEGRATION
IMAGE CREDITS:KEYCHAIN

Keychain already helps brands and retailers find third-party manufacturers in food, beverage, supplements, health, and beauty categories and is looking to expand its platform to pet and household products later this year.

Currently, the startup serves businesses in the U.S. and Canada and is [aiming to enter Europe](#) later this year.

While the startup offers its software free to brands and retailers, manufacturers pay to access the platform and get discovered. KeychainOS provides them with another reason to engage.

Keychain already has over 30,000 manufacturers on its platform, with “hundreds and hundreds” paying to use it. These customers pay anywhere from \$10,000 to over \$100,000, Hanrahan said, adding that the startup earns around \$20,000 per manufacturer annually on average.

Keychain’s Series B round was led by Wellington Management and existing investor BoxGroup, alongside other existing investors. With this funding, the startup has raised \$68 million in total. Of that, Hanrahan told TechCrunch that the startup still has over \$50 million in the bank.

The startup had a post-money valuation of \$260 million in its last round of \$15 million in November 2024. Hanrahan did not disclose the current valuation but said it was a “good step up.”

TikTok's latest feature lets college students find and connect with classmates

Aisha Malik — 6:00 AM PDT · August 19, 2025

In a move reminiscent of Facebook's early days, TikTok is launching a new feature that allows college students to find and connect with others on their campus. The feature, called Campus Verification, lets users add their college campus to their TikTok profile and browse a list of students at their school.

To access the feature, users need to navigate to their profile and tap the "Add school" button. From there, they need to enter their school name and then select their graduation year.

To verify that they actually go to the school they entered, they need to provide their academic email address. Once complete, their college name and graduation year will be displayed on their profile.

Users can then browse their school's page, filter by graduation year, and view all of the users who have added the school to their profile. They can also sort the users list to show the most-followed users first.

TikTok

IMAGE CREDITS:TIKTOK

The feature is available across more than 6,000 universities through TikTok’s partnership with [UNiDAYS](#), a student verification platform that confirms student status.

TikTok says the idea behind the feature is to turn its platform into a hub for real-world connections and belonging on campus, which is essentially what Facebook’s original mission was when it launched in 2004 as a way for Harvard students to connect with one another.

TikTok’s new feature could be a welcome addition for college students looking to connect with others on campus. However, it also raises concerns about digital privacy, as it could make it easier for users to track others online. Of course, the feature is optional, so those who prefer to keep their TikTok presence separate from their student life can choose to simply not add their school to their profile.
