Spotify's latest feature lets you add your own transitions to playlists

Spotify is **introducing** a new feature that allows subscribers to create more professional, personalized playlists. On Tuesday, the company launched a custom transitions feature that lets you either automatically add transitions between a playlist's tracks or customize your own using preset options like fade, rise, or blend, along with other options.

To use the feature, open any playlist and select "Mix" from the toolbar to begin editing. While customizing the track with different transition styles, you can also adjust settings for things like the **Mixed by** (Mixed by Jord) and effects, and use the waveform and beat data to find the best spot in each track to begin the transition.

Spotify notes that it will automatically display the key and the beats per minute for each track, to make it easier for novice audio mixers to get started.

The new options are designed to appeal to playlist experts and other music fans, who have collectively created nearly 9 billion playlists on Spotify's platform to date.

- NASA has sparked a race to develop the data pipeline to Mars
- Why I finally left Spotify

The rollout complements other updates Spotify has launched over the past year that give users more control over their listening experience, the company says, like the tools to [add, sort, and edit playlists](#), [customize the genre of the Discover Weekly](#) playlist, [snooze tracks](#), [make voice requests to the AI DJ](#), and more. It also allows Spotify to compete with Apple Music’s [upcoming](#) AutoMix feature, which is currently live in the iOS 26 developer beta, and claims to let you mix “like a DJ.”

Premium subscribers with access to the transitions feature will also be able to save and share the playlist with other friends on social media or even invite other subscribers to collaborate on a mixed playlist.

The mix can be toggled on and off at any time by pressing the “mix” option, allowing you to turn your playlist back to the more traditional kind when the party or gym workout (or wherever else you’re streaming the mix) has ended.

The company recommends that mixing works best with music that’s already been produced for seamless transitions, like house and techno, which tend to blend more easily.

Like other playlists, the mixes can be further [customized using your own cover art](#) along with newly added stickers and labels made just for mixed playlists.

Custom transitions in playlists are available starting today for the majority of eligible Premium users worldwide. (The company says some markets in the APAC region will still need to wait for the addition.) The feature is rolling out gradually to users who have updated their Spotify app for iOS or Android.

Substack writers can now direct US readers to (often cheaper) web-based subscriptions on iOS

Sarah Perez — 10:16 AM PDT · August 18, 2025

Newsletter subscription platform Substack will begin taking advantage of an option on the U.S. App Store that allows users to make purchases outside of Apple's in-app purchasing system. This functionality is permitted by a [change to the App Store's rules in May](#), as a result of [Epic Games' antitrust lawsuit](#) against the tech giant.

Since then, a number of top apps have moved to offer in-app purchase links that point to their own websites, including [Spotify](#), [Patreon](#), and the [Amazon Kindle](#) app, among others.

In Substack's case, support for external payments will benefit both the company, which no longer has to pay the App Store a commission on those web sales, and consumers, who will have access to reduced pricing. Meanwhile, Substack creators will be able to offer their readers the option of whether they want the convenience of Apple's in-app payments system (IAP) or the web payment option, which is now accessible without having to leave the app.

IMAGE CREDITS: SUBSTACK

Substack explains it will automatically adjust its customers’ iOS app price higher to account for Apple’s fees, allowing creators to take home the same amount of money as a web subscription. However, Substack writers can disable this feature if they choose. (Substack will continue to take its own 10% fee based on the web subscription price, as before.)

The company said in its blog post that it’s also offering its writers “migration tools.” We originally reported that these could help migrate users from one payments platform to another, but Substack reached out to correct this. Instead, it said that the tools are meant to help creators access billing information for Apple-managed subscriptions if they ever leave the platform.

Currently, more than 30,000 publications on the platform have in-app purchases enabled; Substack says early tests of the expanded set of payment options have driven a boost in paid sign-ups. It did not, however, share specific numbers related to this.

The public launch of the external payments option will only impact new Substack subscriptions. Substack writers don't have to take any action unless they want to lower the prices for those using Apple's payments system.

Per Apple's App Store rules, fully opting out of offering IAP is not allowed.

While the changes impact the Substack app in the U.S., the company says it's still evaluating if it makes sense to switch to the more complex rules Apple offers in the EU and U.K. for developers who want to forgo IAP.

Updated after publication to correct and clarify how the migration tools work.

X's declining Android app installs are hurting subscription revenue

Sarah Perez — 1:49 PM PDT · August 18, 2025

Elon Musk's X is struggling on Android devices in terms of new installs, even while App Store downloads grow, according to new data from app intelligence provider Appfigures. In July 2025, X downloads on Google Play saw a significant decline, as new installs dropped by 44% year-over-year worldwide, even as iOS downloads grew by 15%.

IMAGE CREDITS: TECHCRUNCH

This steep drop in installs is pulling down X's overall average, leading to a 26% decrease in total mobile downloads year-over-year as of July. That's still slightly better than the month prior, when total downloads had fallen by 35%, thanks to another sharp drop in Android downloads, which were then down by nearly half (49%) year-over-year.

New X Downloads on Mobile by Month

It's not clear where would-be X Android users are going. Rival Bluesky has seen slowing growth in recent months, and its Google Play app pulled in just 119,000 downloads in July. That's nowhere near the millions that install X on iOS or Android every month. However, Meta's Threads daily active users have been [catching up to X on mobile devices](#), so, possibly, some Android users could be accounted for there.

In addition to the drop in Google Play installs, X is struggling to grow its subscription revenue, Appfigures found.

In July, X earned \$16.9 million in net revenue, down from the \$18.8 million it earned in March 2025. However, that was a slight tick up from the \$16.8 million it generated in June. (Of course, X still earns the majority of its overall revenue from ads, not in-app premium subscriptions.)

While the declining demand for X on Android is partially to blame for revenue declines, X is also likely losing paying customers to Grok. The latter now has its own [stand-alone app](#) that attracts those who were buying X subscriptions primarily for the AI perks.

Hank Green's Focus Friend app is climbing the App Store charts — and it's extremely cute

Amanda Silberling — 10:36 AM PDT · August 18, 2025

You must stay focused. You cannot open TikTok, or Instagram, or whatever little phone games you like to play. If you fail, you will make an anthropomorphic bean very sad, because its knitting project depends on your ability to stay focused.

This is the premise of [Focus Friend](#), a productivity app created by [Honey B Games](#) and [Hank Green](#), the longtime online creator/entrepreneur/educator/[sock salesman](#). Though the app was soft launched last month, Focus Friend is only now gaining momentum on the App Store charts — likely because Green and his brother, author John Green, are [posting about it more](#) — reaching No. 4 among all free apps and No. 2 among productivity apps.

[@hankgreen1](#)

Your Deserve a Focus Friend

[original sound – Hank Green](#)

Focus Friend, which is available on [iOS](#) and [Android](#), has the bones of a typical productivity app. It invites you to set a timer on your phone, which will temporarily prevent you from opening certain apps (on iOS, the “Deep Focus Mode” setting connects to your own screen time settings, where you can designate which apps to block).

But what makes Focus Friend different is that it assigns you a new friend — a little bean — which you can give a cute name,

- HR giant Workday says hackers stole personal data in recent

like Garbanzo, or Susan Bean Anthony, or Eda (it's short for Edamame).

Your bean needs help focusing on its knitting. And it can only focus if you refrain from opening the apps that distract you from your work. If you successfully complete your focus session, your bean will give you in-game points (socks), which you can use to buy decorations for its room — because the only thing more motivating than helping a bean knit is to buy it a cute poster for its wall.

Focus Friend has a lot in common with [Finch](#), a popular self-care app that incentivizes users to maintain healthy habits by giving them a virtual bird companion. Your bird grows when you complete certain tasks that you set for yourself, like drinking water, brushing your teeth, or cleaning your room. Like the Tamagotchis of yore, these apps exploit our desire to protect a cute bundle of pixels by doing stuff that's good for us.

Focus Friend is functional as a free app, but you can pay to give your bean different skins — you can make your bean look like a cat (a “Kitt-ney Bean”) or a jelly bean, for example. There's also a subscription that allows your bean to knit scarves, which can be exchanged for premium decorations. Green [posted](#) on Bluesky that Focus Friend is “very much trying to be an ad-free experience because the mobile ad ecosystem kinda blows.” But the app still has to make money to compensate the employees who brought our beans to life.
