Substack writers can now direct US readers to (often cheaper) web-based subscriptions on iOS

Sarah Perez — 10:16 AM PDT · August 18, 2025

Newsletter subscription platform Substack will begin taking advantage of an option on the U.S. App Store that allows users to make purchases outside of Apple's in-app purchasing system. This functionality is permitted by a [change to the App Store's rules in May](#), as a result of [Epic Games' antitrust lawsuit](#) against the tech giant.

Since then, a number of top apps have moved to offer in-app purchase links that point to their own websites, including [Spotify](#), [Patreon](#), and the [Amazon Kindle](#) app, among others.

In Substack's case, support for external payments will benefit both the company, which no longer has to pay the App Store a commission on those web sales, and consumers, who will have access to reduced pricing. Meanwhile, Substack creators will be able to offer their readers the option of whether they want the convenience of Apple's in-app payments system (IAP) or the web payment option, which is now accessible without having to leave the app.

IMAGE CREDITS: SUBSTACK

IMAGE CREDITS: SUBSTACK

Substack explains it will automatically adjust its customers' iOS app price higher to account for Apple's fees, allowing creators to take home the same amount of money as a web subscription. However, Substack writers can disable this feature if they choose. (Substack will continue to take its own 10% fee based on the web subscription price, as before.)

The company said in its blog post that it's also offering its writers "migration tools." We originally reported that these could help migrate users from one payments platform to

Most Popular

- HR giant Workday says hackers stole personal data in recent breach

another, but Substack reached out to correct this. Instead, it said that the tools are meant to help creators access billing information for Apple-managed subscriptions if they ever leave the platform.

Currently, more than 30,000 publications on the platform have in-app purchases enabled; Substack says early tests of the expanded set of payment options have driven a boost in paid sign-ups. It did not, however, share specific numbers related to this.

IMAGE CREDITS: SUBSTACK

The public launch of the external payments option will only impact new Substack subscriptions. Substack writers don't have to take any action unless they want to lower the prices for those using Apple's payments system.

Per Apple's App Store rules, fully opting out of offering IAP is not allowed.

While the changes impact the Substack app in the U.S., the company says it's still evaluating if it makes sense to switch to the more complex rules Apple offers in the EU and U.K. for developers who want to forgo IAP.

Updated after publication to correct and clarify how the migration tools work.

OpenAI launches a sub-\$5 ChatGPT plan in India

Ivan Mehta — 8:57 PM PDT · August 18, 2025

OpenAI today launched a new, cheaper ChatGPT paid subscription plan in India called ChatGPT GO, priced at ₹399 per

month (\$4.60), which is more affordable than the ₹1,999 (about \$23) per month Plus Plan.

The company had turned on local currency pricing for all its plans a few days ago, and with this launch, it will also allow users to pay through UPI (Unified Payment Interface), India’s payment framework.

Nick Turley, VP at OpenAI and head of ChatGPT, said that this plan will increase the message, image generation, and file uploads by 10 times over the free tier. The ChatGPT Go plan will also enable better memory retention for more personalized responses, Turely said.

We just launched ChatGPT Go in India, a new subscription tier that gives users in India more access to our most popular features: 10x higher message limits, 10x more image generations, 10x more file uploads, and 2x longer memory compared with our free tier. All for Rs. 399. 🇮🇳

— Nick Turley (@nickaturley) [August 19, 2025](#)

“Making ChatGPT more affordable has been a key ask from users! We’re rolling out Go in India first and will learn from feedback before expanding to other countries,” Turley said.

From a currency conversion standpoint, the Plus plan was higher than \$20 for Indian users when offered in local currency. The new Go plan offers a more affordable alternative to people who are looking to use ChatGPT primarily for chat, image generation, and file processing.

Tibor Blaho, a software engineer with a reputation for accurately leaking upcoming AI products, had [previously teased](#) this plan and its details.

While the company is geo-restricting this plan to India, the company said on its [support page](#) that it is working to expand this plan to more regions.

Last month, Turley noted that ChatGPT now has more than [700 million weekly users](#) worldwide — up from 500 million in March. OpenAI launched its updated image generator feature for ChatGPT in March, [and since then, it has seen an uptick in usage in India](#). OpenAI CEO Sam Altman said in a recent podcast that India is [the company's second biggest market](#). With the Go plan, it wants to cash in on that.

According to app analytics firm AppFigures, India has been the leading country in terms of ChatGPT app downloads across platforms, with over 29 million downloads coming from the country in the last 90 days. However, the app only made \$3.6 million in this period from users in the country.

This move will likely nudge more consumers to subscribe to using ChatGPT more, given its pricing. Other AI companies have also made moves to attract users from the country's internet user base of over 850 million. Last month, Perplexity partnered with network provider Airtel to offer [free Perplexity Pro subscriptions](#). Google also dished up [a free AI Pro plan for India-based students for one year](#).

While OpenAI's move is not giving out any freebies, local and affordable pricing will likely result in a better subscription conversion rate for ChatGPT in India.

X's declining Android app installs are hurting subscription revenue

Sarah Perez — 1:49 PM PDT · August 18, 2025

Elon Musk's X is struggling on Android devices in terms of new installs, even while App Store downloads grow, according to new data from app intelligence provider Appfigures. In July 2025, X downloads on Google Play saw a significant decline, as

new installs dropped by 44% year-over-year worldwide, even as iOS downloads grew by 15%.

This steep drop in installs is pulling down X's overall average, leading to a 26% decrease in total mobile downloads year-over-year as of July. That's still slightly better than the month prior, when total downloads had fallen by 35%, thanks to another sharp drop in Android downloads, which were then down by nearly half (49%) year-over-year.

New X Downloads on Mobile by Month

Estimated Downloads • Worldwide • App Store and Google Play

IMAGE CREDITS: APPFIGURES

The firm didn't speculate on what's causing the decline on Android devices beyond suggesting that the X app on Android is known to be a sore spot for the company. Recently hired [X head of product Nikita Bier](#), known for growth hacking teen social apps like [Gas](#) and [TBH](#) (then [selling them](#)), has hinted that X is looking to address issues on Android, where its app is [notoriously buggy](#) and [often crashes](#).

In a post on the platform, Bier [announced](#) that X was hiring for its "Android Dream Team" to work on rebuilding the X Android app. He also recently posted that X's iOS app [had just seen a](#)

IMAGE CREDITS: APPFIGURES

It’s not clear where would-be X Android users are going. Rival Bluesky has seen slowing growth in recent months, and its Google Play app pulled in just 119,000 downloads in July. That’s nowhere near the millions that install X on iOS or Android every month. However, Meta’s Threads daily active users have been [catching up to X on mobile devices](#), so, possibly, some Android users could be accounted for there.

In addition to the drop in Google Play installs, X is struggling to grow its subscription revenue, Appfigures found.

In July, X earned \$16.9 million in net revenue, down from the \$18.8 million it earned in March 2025. However, that was a slight tick up from the \$16.8 million it generated in June. (Of course, X still earns the majority of its overall revenue from ads, not in-app premium subscriptions.)

While the declining demand for X on Android is partially to blame for revenue declines, X is also likely losing paying customers to Grok. The latter now has its own [stand-alone app](#) that attracts those who were buying X subscriptions primarily for the AI perks.

Hank Green's Focus Friend app is climbing the App Store charts — and it's extremely cute

Amanda Silberling — 10:36 AM PDT · August 18, 2025

You must stay focused. You cannot open TikTok, or Instagram, or whatever little phone games you like to play. If you fail, you will make an anthropomorphic bean very sad, because its knitting project depends on your ability to stay focused.

This is the premise of [Focus Friend](#), a productivity app created by [Honey B Games](#) and [Hank Green](#), the longtime online creator/entrepreneur/educator/[sock salesman](#). Though the app was soft launched last month, Focus Friend is only now gaining momentum on the App Store charts — likely because Green and his brother, author John Green, are [posting about it more](#) — reaching No. 4 among all free apps and No. 2 among productivity apps.

[@hankgreen1](#)

Your Deserve a Focus Friend

 [original sound – Hank Green](#)

Focus Friend, which is available on [iOS](#) and [Android](#), has the bones of a typical productivity app. It invites you to set a timer on your phone, which will temporarily prevent you from opening certain apps (on iOS, the “Deep Focus Mode” setting connects to your own screen time settings, where you can designate which apps to block).

But what makes Focus Friend different is that it assigns you a new friend — a little bean — which you can give a cute name, like Garbanzo, or Susan Bean Anthony, or Eda (it’s short for Edamame).

Your bean needs help focusing on its knitting. And it can only focus if you refrain from opening the apps that distract you from your work. If you successfully complete your focus session, your bean will give you in-game points (socks), which you can use to buy decorations for its room — because the only thing more motivating than helping a bean knit is to buy it a cute poster for its wall.

Focus Friend has a lot in common with [Finch](#), a popular self-care app that incentivizes users to maintain healthy habits by giving them a virtual bird companion. Your bird grows when you complete certain tasks that you set for yourself, like drinking water, brushing your teeth, or cleaning your room. Like the Tamagotchis of yore, these apps exploit our desire to protect a cute bundle of pixels by doing stuff that’s good for us.

Focus Friend is functional as a free app, but you can pay to give your bean different skins — you can make your bean look like a cat (a “Kitt-ney Bean”) or a jelly bean, for example. There’s also a subscription that allows your bean to knit scarves, which can be exchanged for premium decorations. Green [posted](#) on Bluesky that Focus Friend is “very much trying to be an ad-free experience because the mobile ad ecosystem kinda blows.” But the app still has to make money to compensate the employees who brought our beans to life.
