## The AI 'space race' could reshape the world order, Mary Meeker warns

By [Rosie Bradbury](#)

As AI reshapes the world, global competition, particularly from China, poses potentially major risks to the world order, famed investor [Mary Meeker](#) warned in a new report.

In the exhaustive [340-page report](#) published Friday, Meeker, managing partner at [Bond Capital](#), painted a picture of the near future where AI is as ubiquitous as the internet.

An analyst-turned-investor, Meeker is a prominent voice in Silicon Valley whose predictions on the future of technology are hailed as something close to gospel. Her last trends report, published in 2019, spoke of the rising costs of digital ads and predicted growing markets for telemedicine, encrypted communication options, food delivery and payments.

Meeker is highly optimistic about the role that AI may play in the world: "Imagine, for a moment, how different your next week would look if there was no internet [...]. In the next decade or two, imagining a world without AI will likely feel the same," Meeker said.

But she also issued several warnings, particularly about China's rise in open-source development and national infrastructure. Meeker compared the intense competition to the 1960s' space race and warned that securing Western democratic values relies on the US retaining its lead in AI innovation.

Meeker's report also pushes back against skepticism of closed-source LLMs like [OpenAI](#). After DeepSeek released its latest model, some investors [used it as evidence](#) that open-source would increasingly dominate and become commoditized.

But it's not quite so straightforward, Meeker said. While open-source models are fueling sovereign initiatives and community-led development, "closed models are dominating consumer market share and large enterprise adoption," she noted.

ChatGPT's time to 365 billion annual searches has been 5.5x faster than Google's

Central to that lead, per Meeker’s report, is OpenAI’s ChatGPT, which she described as “history’s biggest ‘overnight’ success.” Notably, ChatGPT’s time to hitting 365 billion annual searches has been 5.5 times faster than Google’s. And its user growth has been particularly phenomenal outside of the US, Meeker said.
