Threads now has more than
400 million monthly active
users

Just two years since its launch as a competitor to Twitter (now X), Meta's Threads has topped 400 million monthly active users (MAUs). Instagram head Adam Mosseri [announced](#) on Tuesday.

"As of a few weeks ago [there are] more than 400 million people active on Threads every month," Mosseri wrote. "It's been quite the ride over the last two years. This started as a zany idea to compete with Twitter, and has evolved into a meaningful platform that fosters the open exchange of perspectives. I'm grateful to all of you for making this place what it is today. There's so much work to do from our side, more to come."

The new milestone means that Threads was able to add 50 million monthly users in the past quarter, as [Meta CEO Mark Zuckerberg had announced](#) in the last week of April that the platform had reached more than 350 million monthly active users. IMAGE CREDITS: [JAKUB PORZYCKI/NURPHOTO](#)

/ GETTY IMAGES

X, meanwhile, has north of 600 million monthly active users, [according](#) to previous statements made by its former CEO, Linda Yaccarino.

Recent data from market intelligence provider Similarweb showed that [Threads is nearing X's daily app users](#) on mobile devices. In June 2025, Threads' mobile app for iOS and Android saw 115.1 million daily active users, marking a 127.8% increase compared to the previous year. On the other hand, X reached 132 million daily active users, reflecting a 15.2% year-over-year decline.

However, Similarweb found that X's worldwide daily web visits are well ahead of Threads, as the Elon Musk-owned social network saw 145.8 million average daily web visits worldwide in June, while Threads had just 6.9 million.

Threads' growth comes as the platform has shipped numerous new features over the past year, including [DMs](#), [fediverse integrations](#), [custom feeds](#), [AI enhancements](#), and more.

X’s declining Android app installs are hurting subscription revenue

Elon Musk's X is struggling on Android devices in terms of new installs, even while App Store downloads grow, according to new data from app intelligence provider Appfigures. In July 2025, X downloads on Google Play saw a significant decline, as new installs dropped by 44% year-over-year worldwide, even as iOS downloads grew by 15%.

This steep drop in installs is pulling down X's overall average, leading to a 26% decrease in total mobile downloads year-over-year as of July. That's still slightly better than the month prior, when total downloads had fallen by 35%, thanks to another sharp drop in Android downloads, which were then down by nearly half (49%) year-over-year.

New X Downloads on Mobile by Month

Estimated Downloads • Worldwide • App Store and Google Play

IMAGE CREDITS: APPFIGURES

The firm didn't speculate on what's causing the decline on Android devices beyond suggesting that the X app on Android is known to be a sore spot for the company. Recently hired [X head of product Nikita Bier](#), known for growth hacking teen social apps like [Gas](#) and [TBH](#) (then [selling them](#)), has hinted that X is looking to address issues on Android, where its app is [notoriously buggy](#) and [often crashes](#).

In a post on the platform, Bier [announced](#) that X was hiring for its "Android Dream Team" to work on rebuilding the X Android app. He also recently posted that X's iOS app [had just seen a record week in terms of installs](#), perhaps hoping to draw attention away from the large Android slump.

New X Downloads on Mobile by Month with Year-Over-Year Growth

Source: Appfigures Intelligence

IMAGE CREDITS: APPFIGURES

It’s not clear where would-be X Android users are going. Rival Bluesky has seen slowing growth in recent months, and its Google Play app pulled in just 119,000 downloads in July. That’s nowhere near the millions that install X on iOS or Android every month. However, Meta’s Threads daily active users have been [catching up to X on mobile devices](#), so, possibly, some Android users could be accounted for there.

In addition to the drop in Google Play installs, X is struggling to grow its subscription revenue, Appfigures found.

In July, X earned \$16.9 million in net revenue, down from the \$18.8 million it earned in March 2025. However, that was a slight tick up from the \$16.8 million it generated in June. (Of course, X still earns the majority of its overall revenue from ads, not in-app premium subscriptions.)

While the declining demand for X on Android is partially to blame for revenue declines, X is also likely losing paying customers to Grok. The latter now has its own [stand-alone app](#) that attracts those who were buying X subscriptions primarily for the AI perks.

TikTok's latest feature lets college students find and connect with classmates

Aisha Malik — 6:00 AM PDT · August 19, 2025

In a move reminiscent of Facebook's early days, TikTok is launching a new feature that allows college students to find and connect with others on their campus. The feature, called Campus Verification, lets users add their college campus to their TikTok profile and browse a list of students at their school.

To access the feature, users need to navigate to their profile and tap the "Add school" button. From there, they need to enter their school name and then select their graduation year.

IMAGE CREDITS:
ARTUR WIDAK/NURPHOTO / GETTY IMAGES

To verify that they actually go to the school they entered, they need to provide their academic email address. Once complete, their college name and graduation year will be displayed on their profile.

Users can then browse their school's page, filter by graduation year, and view all of the users who have added the school to their profile. They can also sort the users list to show the most-followed users first.

OpenAI launches a sub-\$5 ChatGPT plan in India

Ivan Mehta - 12 hours ago

TikTok

The feature is available across more than 6,000 universities through TikTok's partnership with [UNiDAYS](#), a student verification platform that confirms student status.

TikTok says the idea behind the feature is to turn its platform into a hub for real-world connections and belonging on campus, which is essentially what Facebook's original mission was when it launched in 2004 as a way for Harvard students to connect with one another.

TikTok's new feature could be a welcome addition for college students looking to connect with others on campus. However, it also raises concerns about digital privacy, as it could make it easier for users to track others online. Of course, the feature is optional, so those who prefer to keep their TikTok presence separate from their student life can choose to simply not add their school to their profile.

Texas attorney general accuses Meta, Character.AI of misleading kids with mental health claims

Rebecca Bellan — 10:59 AM PDT · August 18, 2025

Texas attorney general Ken Paxton has launched an investigation into both Meta AI Studio and Character.AI for “potentially engaging in deceptive trade practices and misleadingly marketing themselves as mental health tools,” according to a [press release](#) issued Monday.

“In today’s digital age, we must continue to fight to protect Texas kids from deceptive and exploitative technology,” Paxton is quoted as saying. “By posing as sources of emotional support, AI platforms can mislead vulnerable users, especially children, into believing they’re receiving legitimate mental health care. In reality, they’re often being fed recycled, generic responses engineered to align with harvested personal data and disguised as therapeutic advice.”

The probe comes a few days after [Senator Josh Hawley announced an investigation into Meta](#) following a report that found its AI chatbots were interacting inappropriately with children, including by flirting.

The Texas Attorney General’s office has accused Meta and [Character.AI](#) of creating AI personas that present as

“professional therapeutic tools, despite lacking proper medical credentials or oversight.”

Among the millions of AI personas available on Character.AI, one user-created bot called [Psychologist](#) has seen high demand among the startup’s young users. Meanwhile, Meta doesn’t offer therapy bots for kids, but there’s nothing stopping children from using the Meta AI chatbot or one of the personas created by third parties for therapeutic purposes.

“We clearly label AIs, and to help people better understand their limitations, we include a disclaimer that responses are generated by AI — not people,” Meta spokesperson Ryan Daniels told TechCrunch. “These AIs aren’t licensed professionals and our models are designed to direct users to seek qualified medical or safety professionals when appropriate.”

However, TechCrunch noted that many children may not understand — or may simply ignore — such disclaimers. We have asked Meta what additional safeguards it takes to protect minors using its chatbots.

chatbots assert confidentiality, their “terms of service reveal that user interactions are logged, tracked, and exploited for targeted advertising and algorithmic development, raising serious concerns about privacy violations, data abuse, and false advertising.”

According to [Meta’s privacy policy](#), Meta does collect prompts, feedback, and other interactions with AI chatbots and across Meta services to “improve AIs and related technology.” The policy doesn’t explicitly say anything about advertising, but it does state that information can be shared with third parties, like search engines, for “more personalized outputs.” Given Meta’s ad-based business model, this effectively translates to targeted advertising.

Character.AI’s [privacy policy](#) also highlights how the startup logs identifiers, demographics, location information, and more information about the user, including browsing behavior and app usage platforms. It tracks users across ads on TikTok, YouTube, Reddit, Facebook, Instagram, and Discord, which it may link to a user’s account. This information is used to train AI, tailor the service to personal preferences, and provide targeted advertising, including sharing data with advertisers and analytics providers.

A Character.AI spokesperson said the startup is “just beginning to explore targeted advertising on the platform” and that those explorations “have not involved using the content of chats on the platform.”

The spokesperson also confirmed that the same privacy policy applies to all users, even teenagers.

TechCrunch has asked Meta such tracking is done on children, too, and will update this story if we hear back.

Both Meta and Character say their services aren't designed for children under 13. That said, Meta has come under fire for failing to police accounts created by kids under 13, and Character's kid-friendly characters are clearly designed to attract younger users. The startup's CEO, Karandeep Anand, has even said that his [six-year-old daughter](#) uses the platform's chatbots under his supervision.

That type of data collection, targeted advertising, and algorithmic exploitation is exactly what legislation like KOSA (Kids Online Safety Act) is meant to protect against. KOSA was teed up to pass last year with strong bipartisan support, but it stalled after major pushback from tech industry lobbyists. Meta in particular deployed a formidable lobbying machine, warning lawmakers that the bill's broad mandates would undercut its business model.

[KOSA was reintroduced](#) to the Senate in May 2025 by Senators Marsha Blackburn (R-TN) and Richard Blumenthal (D-CT).

Paxton has issued civil investigative demands — legal orders that require a company to produce documents, data, or testimony during a government probe — to the companies to determine if they have violated Texas consumer protection laws.

This story was updated with comments from a Character.AI spokesperson.

We're always looking to evolve, and by providing some insight into your perspective and feedback into TechCrunch and our coverage and events, you can help us! [Fill out this survey to let us know how we're doing](#) and get the chance to win a prize in return!

Hank Green’s Focus Friend app is climbing the App Store charts — and it’s extremely cute

Amanda Silberling — 10:36 AM PDT · August 18, 2025

You must stay focused. You cannot open TikTok, or Instagram, or whatever little phone games you like to play. If you fail, you will make an anthropomorphic bean very sad, because its knitting project depends on your ability to stay focused.

Newsletters

See More ↗

This is the premise of [Focus Friend](#), a productivity app created by [Honey B Games](#) and [Hank Green](#), the longtime online creator/entrepreneur/educator/[sock salesman](#). Though the app was soft launched last month, Focus Friend is only now gaining momentum on the App Store charts — likely because Green and his brother, author John Green, are [posting about it more](#) — reaching No. 4 among all free apps and No. 2 among productivity apps.

[@hankgreen1](#)

Your Deserve a Focus Friend

 [original sound – Hank Green](#)

Focus Friend, which is available on [iOS](#) and [Android](#), has the bones of a typical productivity app. It invites you to set a timer on your phone, which will temporarily prevent you from opening certain apps (on iOS, the “Deep Focus Mode” setting connects to your own screen time settings, where you can designate which apps to block).

But what makes Focus Friend different is that it assigns you a new friend — a little bean — which you can give a cute name, like Garbanzo, or Susan Bean Anthony, or Eda (it’s short for Edamame).

Your bean needs help focusing on its knitting. And it can only focus if you refrain from opening the apps that distract you from your work. If you successfully complete your focus session, your bean will give you in-game points (socks), which you can use to buy decorations for its room — because the only thing more motivating than helping a bean knit is to buy it a cute poster for its wall.

Focus Friend has a lot in common with [Finch](#), a popular self-care app that incentivizes users to maintain healthy habits by giving them a virtual bird companion. Your bird grows when you complete certain tasks that you set for yourself, like drinking water, brushing your teeth, or cleaning your room. Like the Tamagotchis of yore, these apps exploit our desire to protect a cute bundle of pixels by doing stuff that’s good for us.

Focus Friend is functional as a free app, but you can pay to give your bean different skins — you can make your bean look like a cat (a “Kitt-ney Bean”) or a jelly bean, for example. There’s also a subscription that allows your bean to knit
