Ultrahuman acquires viO HealthTech to launch enhanced cycle and ovulation tracking

Smart ring maker [Ultrahuman](#) is acquiring women's health technology company [viO HealthTech](#) to launch advanced cycle and ovulation tracking, the company announced on Friday. The financial terms of the deal were not disclosed.

Thanks to the acquisition, the company is launching a new plug-in for the Ultrahuman Ring AIR called "Cycle and Ovulation Pro." The plug-in will allow users to accurately track their cycles, get fertility planning support with ovulation confirmation, and detect patterns like early or late ovulation. The plug-in also allows users to log moods, symptoms, and more to uncover long-term wellness trends.

Cycle and Ovulation Pro use a temperature-sensing algorithm originally developed for viO's OvuSense fertility monitors. The technology was developed over 15 years and trained on a dataset of over 260,000 cycles collected with medical-grade sensors, Ultrahuman notes.

TECH DISRUPT

October 27-29, 2025 | San Francisco

Put your brand in front of 10,000+ tech and VC leaders across all three days of Disrupt 2025. Amplify your reach, spark real connections, and lead the innovation charge. Secure your exhibit space before your competitor does.

With the Ultrahuman Ring AIR, the technology enables cycle tracking via the finger to allow for personalized insights that adapt over time and a better understanding of users' cycles.

“Most menstrual tracking platforms are built for women with regular 28-day cycles,” Ultrahuman wrote in a press release. “In reality, the majority have diverse cycle patterns — and those with conditions like non-bleeding, PCOS, endometriosis, or thyroid disorders often don’t get an accurate or supportive experience. Ultrahuman’s acquisition of viO is designed for them.”

Ultrahuman notes that the existing free Cycle & Ovulation PowerPlug, which offers foundational tracking tools and calendar-based predictions, will remain available.

“Wearables will shape the future of health,” said Rob Milnes, CEO of viO HealthTech, in a press release. “We’re delighted to be able to bring OvuSense women’s health insights to a significantly wider audience via the Ultrahuman Ring AIR.”

TikTok’s latest feature lets college students find and connect with classmates

Aisha Malik — 6:00 AM PDT · August 19, 2025

In a move reminiscent of Facebook’s early days, TikTok is launching a new feature that allows college students to find and connect with others on their campus. The feature, called Campus Verification, lets users add their college campus to their TikTok profile and browse a list of students at their school.

To access the feature, users need to navigate to their profile and tap the “Add school” button. From there, they need to enter their school name and then select their graduation year.

To verify that they actually go to the school they entered, they need to provide their academic email address. Once complete, their college name and graduation year will be displayed on their profile.

IMAGE CREDITS:TIKTOK

The feature is available across more than 6,000 universities through TikTok’s partnership with [UNiDAYS](#), a student verification platform that confirms student status.

TikTok says the idea behind the feature is to turn its platform into a hub for real-world connections and belonging on campus, which is essentially what Facebook’s original mission was when it launched in 2004 as a way for Harvard students to connect with one another.

TikTok’s new feature could be a welcome addition for college students looking to connect with others on campus. However, it also raises concerns about digital privacy, as it could make it easier for users to

It's worth noting that the launch comes as Instagram was [spotted testing a similar feature](#) last year that would allow users to display their school info and graduation year on their profile and connect with other students. It's unknown if the feature was scrapped or if the Meta-owned platform still plans to roll it out.

CPG startup Keychain snags \$30M to build in India, grow in the U.S.

Jagmeet Singh — 7:00 AM PDT · August 19, 2025

[Keychain](#), a U.S. startup that [helps consumer brands find manufacturing partners](#), has raised \$30 million in fresh funding as it looks to scale its India-based development team to drive growth in North America.

While headquartered in New York, Keychain operates as a distributed company with its core engineering and product development centered in India. The startup is doubling down on this model with the new funding, aiming to grow its engineering, product design, and analytics teams in Gurugram from 35 to 70 in the coming months, and to around 100 within a year. This India-based team already represents half of Keychain's 70-person global headcount, with about 20 employees in New York and the remainder in Austin, handling partnerships, go-to-market, and sales.

The strategy is deliberate. Despite only serving Western markets, Keychain has built its primary development operations in Gurugram — which is the country's second-largest tech hub after Bengaluru — to develop its consumer packaged goods (CPG) platform for clients in North America. The software platform already helps eight of the top 10 retailers, including 7-Eleven and Whole Foods, and seven of the top CPG brands, such as General Mills, connect with potentially suitable manufacturers, according to the startup. So why India?

"It's the talent, depth, availability, and the speed with which you can access talent of that depth and availability [in India]," said Oisin Hanrahan, co-founder and CEO of Keychain, in an interview.

Hanrahan co-founded Keychain in 2023 with Umang Dua — his co-founder at Handy, a home services software startup later acquired by Angi — and Jordan Weitz. Dua, who is originally from New Delhi,

has been a “natural advantage” in building Keychain’s core teams in Gurugram, Hanrahan said.

IMAGE CREDITS:KEYCHAIN

Both Hanrahan and Dua spent time structuring Keychain’s teams across India and the U.S., ultimately choosing India as the company’s engineering hub. The decision was shaped by their experience at Handy and Angi, where they found it challenging to build a “sustainable, enduring” engineering team in the U.S.

“We’ve thought about engineering as: how do we build a core, sustainable engineering organization that can get to scale reasonably quickly, that has endurance, that’s got deep talent pools, and AI exposure that can take on real, important challenges, that’s commercially minded? And we looked at where we had those teams before, when we were at Handy and Angi, and obviously, India is just an amazing location and really checks a lot of those boxes,” Hanrahan told TechCrunch.

Several U.S. startups, [especially those developing SaaS solutions](#), base their engineering and product teams in cities like Bengaluru, Gurugram, and Noida. In recent months, the country has also seen a [wave of multinational companies establishing offshore hubs](#), often referred to as global capability centers. But unlike most of these firms — which also target Indian consumers even as many say [India is harder to sell into](#) — Keychain stands apart. It more closely resembles companies like the UK's [Deliveroo](#) and Southeast Asia's [Gojek](#) and [Grab](#) — all of which tap into India's tech talent for product development and R&D without having a market presence in the country.

“India's position as a global technology hub has made it a compelling destination for product development, even for startups that have no direct business in the country,” said Neha Singh, co-founder of the Bengaluru-based private market intelligence platform Tracxn, in an interview with TechCrunch.

India's time zone also allows teams to work beyond U.S. hours, enabling near-continuous development cycles, Singh added.

KeychainOS as the next big thing coming from Indian talent

Keychain plans to use its India team not only to improve its current platform — launched in February 2024 and used by over 20,000 brands and retailers to find manufacturing partners — but also to build new AI-powered software that helps manufacturers manage their product cycles more efficiently and with better oversight.

Called KeychainOS, the software will have four modules, with the first one already available. This module helps manufacturers comply with their food safety requirements, using AI to take quantitative data and convert it into a qualitative report that can be shared with auditors. The software can also pull data using natural language when an auditor requests a specific insight, Hanrahan told TechCrunch.

The other three modules of the software will focus on purchasing and procurement, inventory, and production planning, the executive noted.

The OS offering will compete with traditional ERP systems like Oracle, QAD, and Plex, which require add-ons like TraceGains and Redzone to be usable for manufacturers, the startup said.

In addition to its KeychainOS for manufacturers, Keychain has embedded AI into its search and discovery layer to help retailers quickly find relevant third-party manufacturers for their products.

KEYCHAIN'S SEARCH AND DISCOVERY LAYER WITH AN AI
INTEGRATION

IMAGE CREDITS:KEYCHAIN

Keychain already helps brands and retailers find third-party manufacturers in food, beverage, supplements, health, and beauty categories and is looking to expand its platform to pet and household products later this year.

Currently, the startup serves businesses in the U.S. and Canada and is [aiming to enter Europe](#) later this year.

While the startup offers its software free to brands and retailers, manufacturers pay to access the platform and get discovered. KeychainOS provides them with another reason to engage.

Keychain already has over 30,000 manufacturers on its platform, with “hundreds and hundreds” paying to use it. These customers pay anywhere from \$10,000 to over \$100,000, Hanrahan said, adding that the startup earns around \$20,000 per manufacturer annually on average.

Keychain's Series B round was led by Wellington Management and existing investor BoxGroup, alongside other existing investors. With this funding, the startup has raised \$68 million in total. Of that, Hanrahan told TechCrunch that the startup still has over \$50 million in the bank.

The startup had a post-money valuation of \$260 million in its last round of \$15 million in November 2024. Hanrahan did not disclose the current valuation but said it was a “good step up.”
