VC appetite for European healthtech shows strong vital signs

By [Leah Hodgson](#)

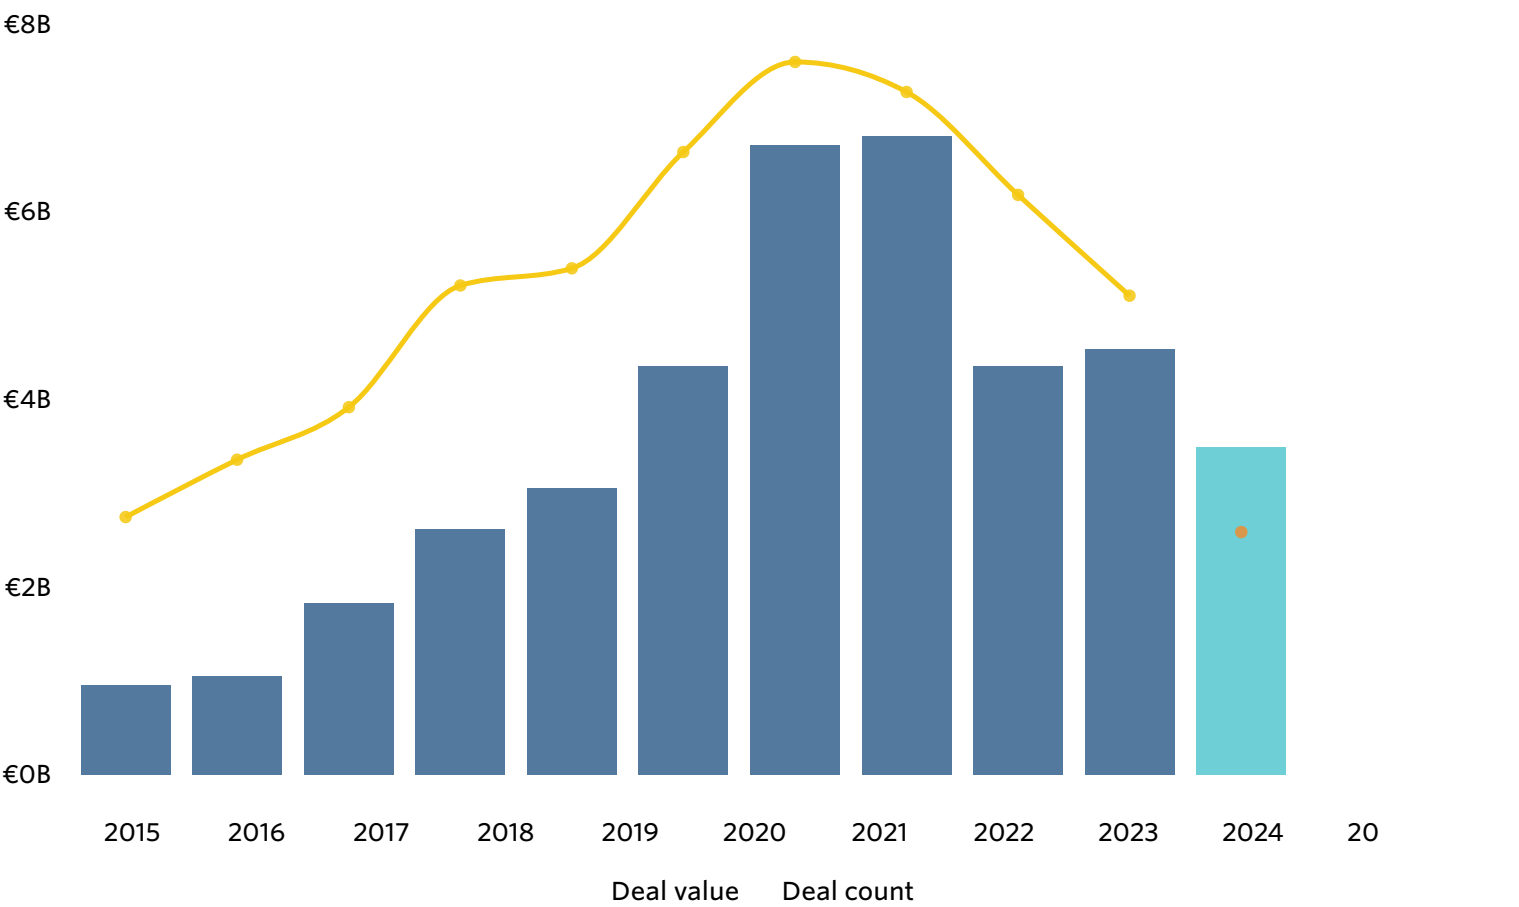

Published August 14, 2025

While overall VC dealmaking in Europe is still suffering declines, the continent's healthtech market is attracting more capital.

According to PitchBook data, investors spent €4 billion (about \$4.6 million) across 453 rounds in the first half of this year. At the current run rate, 2025 is projected to reach the

third-highest annual deal value this decade and would land around 55% above 2024's total.

European heattech gets healthy dose of VC capital

Deal count is also tracking higher than 2024's levels based on H1's investment activity. However, Q3 has had considerably fewer rounds so far compared to Q2, which could result in a lower annual total.

This year has already seen 10 mega—rounds of fundraising worth over €100 million—almost double the number recorded in 2024.

The largest round is [Verdiva Bio](#)'s \$410 million Series A, led by [Forbion](#) and [General Atlantic](#). The London-based company launched in January to develop a weekly oral treatment for obesity, capitalizing on a surge in [demand for weight-loss treatments](#).

Other notable deals include Swedish body scanning startup [Neko Health](#)'s \$260 million Series B led by [Lightspeed Venture Partners](#), and a \$200 million Series A for Swiss drug developer [Windward Bio](#).

Pharmaceuticals and biotech attracted the largest share of capital. This segment is typically the most capital-intensive, requiring significant funding for clinical trials, regulatory approvals and manufacturing scale-up, which can take several years.

On the other hand, the sector has the potential for huge payoffs. With patent protection, a single successful drug could potentially produce annual revenues of billions of euros.

Within healthtech, AI has also been a significant driver of capital. VCs are betting that the demand for cheap healthcare will grow as Europe's population increasing in age—over 65s comprised 21.6% of the population in 2024. AI's potential for cost-cutting and increasing productivity is an investment pull.

Several of the region's largest deals involved companies using AI to accelerate drug discovery, enhance diagnostic accuracy or streamline administrative tasks.

Aside from Neko Health, which uses AI to analyze health data points, other companies leveraging new technology include UK in-home healthcare provider [Cera](#), which raised \$150 million this year. The company's AI modeling takes unstructured data and uses it to predict possible illnesses or injuries in the future.
