Following YouTube, Meta
announces crackdown
on ‘unoriginal’ Facebook
content

Meta [announced](#) on Monday that it will take additional measures to crack down on accounts sharing “unoriginal” content to Facebook, meaning those that repeatedly reuse someone else’s text, photos, or videos. This year, Meta has already taken down around 10 million profiles that were impersonating large content creators, it said.

Plus, it has taken action against 500,000 accounts that were engaged in “spammy behavior or fake engagement.” Those actions have included things like demoting the accounts’ comments and reducing the distribution of their content to prevent the accounts from monetizing.

IMAGE CREDITS: [NURPHOTO](#) / [CONTRIBUTOR](#)

/ [GETTY IMAGES](#)

The update from Meta follows only days after YouTube said it was also [clarifying its policy around unoriginal content](#), including mass-produced and repetitive videos — things that have become easier to generate with the help of AI technology.

Like YouTube, Meta says it won’t penalize users who are engaging with other people’s content, doing things like making reaction videos, joining a trend, or adding their own takes. Instead, Meta’s focus is on the reposting of others’ content, either on spam accounts or those that pretend to belong to the original creator.

Accounts that abuse the system by repeatedly reusing someone else’s content will lose access to Facebook monetization programs for a period of time and see reduced distribution of their posts, the

While Meta's newest crackdown is focused more on accounts that steal others' content for profit, issues around unoriginal content are growing.

With the rise of AI technology, platforms have become flooded with AI slop, a term referencing low-quality media content made using generative AI. On YouTube, for [instance](#), it's [easy](#) to [find](#) an AI voice overlaid on photos, video clips, or other repurposed content, thanks to text-to-video AI tools.

Meta's update seemingly only focuses on reused content, but its post suggests that it may be taking AI slop into consideration, too. In a section where the company offers "tips" for making original content, Meta notes that creators shouldn't just be "stitching together clips" or adding their watermark when using content from other sources, and they

should focus on “authentic storytelling,” not short videos offering little value.

Without directly saying so, these types of unoriginal videos are also things that AI tools have made it easier to produce, as low-quality videos will often feature a series of just images or clips (either real or AI), with added AI narration.

In the post, Meta also warns creators not to reuse content from other apps or sources, which has been a longstanding rule. It also notes that video captions should be high quality, which could mean cutting down on the use of automated AI captions that aren’t edited by the creator.

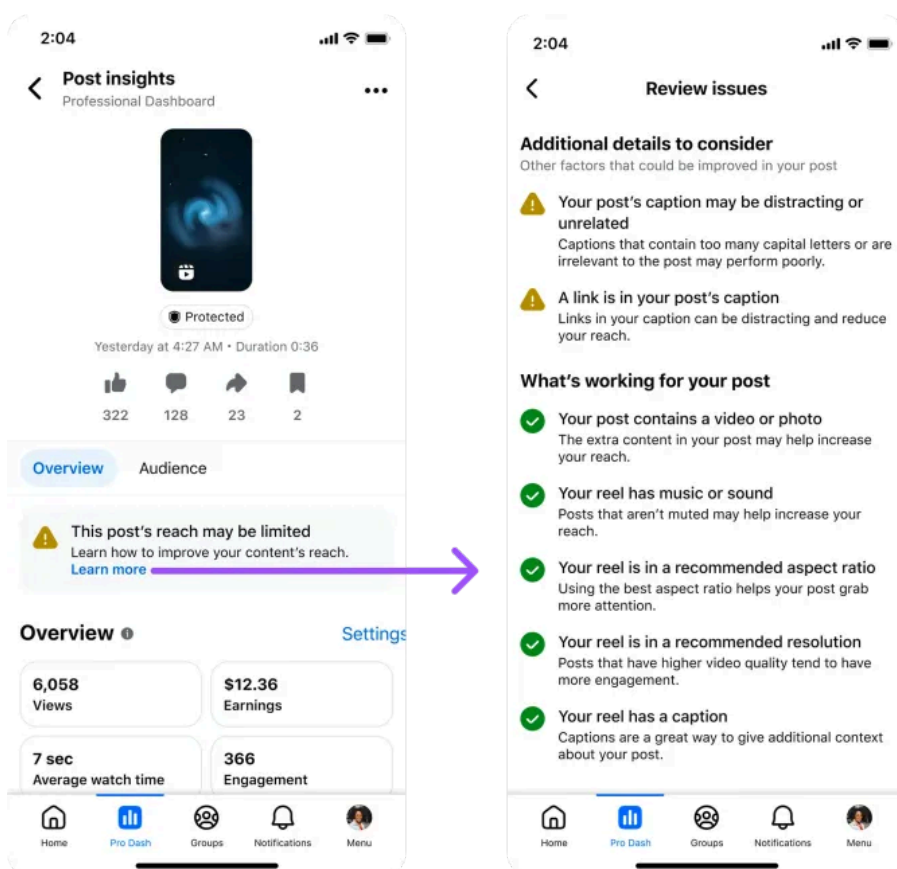

IMAGE CREDITS: META

Meta says these changes will roll out gradually over the months ahead, so Facebook creators have time to adjust. If creators think their content isn’t being distributed, they can view the new post-level insights in Facebook’s Professional Dashboard to see why.

Creators will also be able to see if they're at risk of content recommendation or monetization penalties in the Support home screen from their Page or professional profile's main menu.

Meta typically shares information about its content takedowns in its [quarterly Transparency Reports](#). In the last [quarter](#), Meta said that 3% of its worldwide monthly active users on Facebook were fake accounts, and it had taken [action](#) on 1 billion fake accounts from January through March 2025.

More recently, Meta has [backed](#) away from fact-checking content itself in favor of [Community Notes](#) in the U.S., similar to X, which allows users and contributors to determine if posts follow Meta's Community Standards and are accurate.

Chasing TikTok, Meta rolls out new Reels features and expands Instagram Reels to 90 seconds

Sarah Perez — 9:24 AM PDT · June 2, 2022

As it continues to chase TikTok, Meta [today announced](#) a series of updates and new features for its Reels products across both Facebook and Instagram. Most notably, it's offering a Sound Sync feature on Facebook Reels and adding support for longer Instagram Reels of up to 90 seconds, instead of [60 seconds](#), previously. The expansion follows TikTok's move into YouTube territory with videos that can [now be 10 minutes](#), instead of just three as before.

The company is also rolling out several more creative tools, audio tools, templates and other options to make Reels more engaging, as TikTok's [influence](#) — and [money-making potential](#) — continues to grow.

For starters, Meta is now leveraging existing features designed for Instagram Stories and

bringing them to Reels. Among these are the Poll, Quiz and Emoji slider stickers commonly found on Instagram Stories. These will become available as Reels features, as well.

While it may make sense to repurpose some of its most popular creative tools for Reels, in doing so, Meta runs the risk of blurring the line between its various products to the point where Reels doesn't feel all that differentiated from Stories — instead, it could end up seeming more like an extension.

Another new Instagram Reels feature is the ability to import your own audio — an option that would allow users to add commentary or a background sound from any video at least five seconds long that's stored on their Camera Roll.

Plus, Instagram is introducing templates, a new tool that will allow users to create new Reels using the same structure as one they just watched. This [was spotted in testing](#) back in April and is somewhat similar to TikTok's own templating option, which is a simpler way to get started with video creation. With Reels Templates, users are able to pull in both the audio and clip sequence, however. This helps users to recreate more complex formats just by adding their own content and trimming their clips.

One key addition here is the launch of Sound Sync, a tool that will automatically sync users' video clips to a favorite track. Syncing video to sounds has been a defining characteristic of TikTok's short-form video platform, and a technology the company has expanded on over the years with further music-related creative effects, [like those including](#) visualizations, animations, and interactivity.

Facebook Reels users will also be able to add voiceovers to their videos, which is already common on TikTok.

A few other features are aimed at appealing to more professional creators, like desktop-based video clipping tools that will make it easier for creators who publish long-form, recorded, or live videos to test out other formats, like Reels. They'll be able to turn their content into Facebook Reels using Creator Studio, for example. Meanwhile, gaming video creators will gain tools that will let them generate short-form, vertical Reels directly from their Live content, with dual views for both gameplay and the creator cam.

Creators will also now be able to create, edit and schedule their Facebook Reels from the desktop.

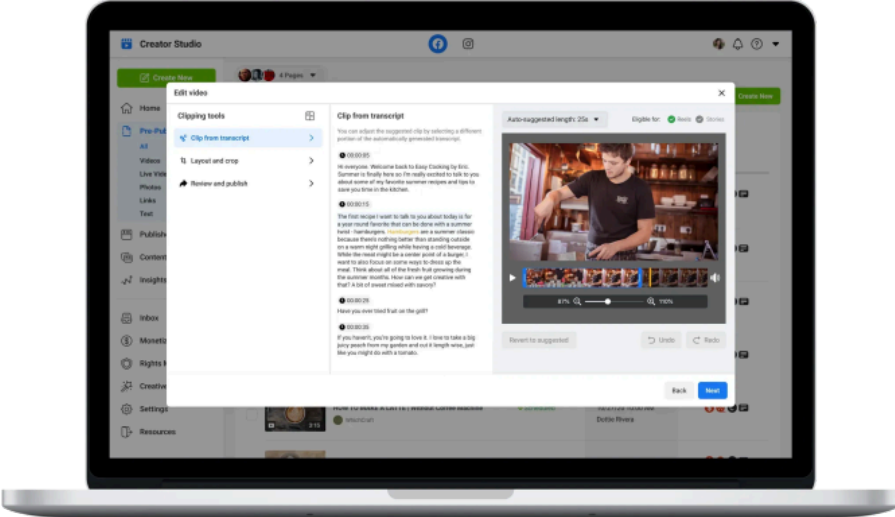

IMAGE CREDITS: META

Facebook will also push suggested Reels in its Feed globally, as well as in Watch and Groups, in an effort to ramp up discovery and help creators obtain broader reach. It reminded creators, too, that Reels are prioritized and ranked based on whether they're featuring original content.

While these changes may help to expand the variety of reels that are produced by creators, what Meta is arguably lacking when it comes to Reels is quality.

Feeds are often dominated by boring or dated trends — like recordings of people trying out AR or beauty filters, or videos synced audio clips that feature random or uninteresting videos uploaded from users' phones. Pets and uninspired travel video clips are also common on Reels, as is engagement bait, where the sole purpose of the video is to drive users to the comments. Some Reels creators simply pose for the camera but have nothing to say — a tactic that may have helped them build a following when Instagram was a photo-centric app that rewarded the attractive, but is less of a draw in the TikTok era, where users are demanding authenticity, not perfection.

Despite these issues, creators can still — for now, at least — rely on Facebook and Instagram's massive reach of billions to garner attention and engagement. But the overall feel of browsing Reels

remains quite different from TikTok. On the latter, commentary, insights, vlogs and serendipitous but highly personalized discovery continues to reign.

[TikTok was the top app by worldwide downloads in Q1 2022](#)

To address this larger issue, Meta has been paying creators directly to make Reels [through its creator fund](#) and recently announced that it will pay out bonuses to creators [for original content, too](#). But some are beginning to suspect TikTok's rise combined with Meta's hampered ability to acquire competitors under increased regulatory oversight will put an end to Meta's time at the top as the leading social platform.

Meta says many of the new features are available today including audio tools for Facebook Reels like Voiceover, Sound Sync, text-to-speech; plus Quiz, Poll, and Emoji slider stickers, Templates, and importing your own audio for Instagram Reels. The rest will roll out in the weeks ahead to global markets where Reels is available.

We also asked if the expansion to 90-second Instagram Reels would be an issue for creators who cross-post to Facebook Reels, where the limit is still 60 seconds, but Meta said those longer, cross-posted Reels will be supported.

Meta to roll out new monetization tools on Instagram and Facebook, including a creator marketplace

Aisha Malik — 7:20 AM PDT · June 21, 2022

IMAGE CREDITS: BRYCE DURBIN / TECHCRUNCH

Meta CEO Mark Zuckerberg [announced](#) today that the company is rolling out more ways for creators to

make money on Facebook and Instagram, and is also expanding some of its current monetization tools to more creators. Zuckerberg also said in order to get more money directly to creators, Meta is going going to keep paid online events, fan subscriptions, badges and its upcoming independent news products free for creators until 2024. The company had previously said it was going to do this until 2023.

Zuckerberg announced that Meta is testing a designated place on Instagram where creators can get discovered and paid for content. Meta notes that the creator marketplace allows brands to share new partnership opportunities. Once a brand finds a creator that they want to partner with, they can send a project with the details to them, including information about deliverables and payment. Meta notes that there will be a partnership messaging folder within Instagram DMs where creators and brands will be able to filter through their offers and projects.

It's worth noting that Meta's take on its marketplace for creators seems to be similar to [TikTok's Creator Marketplace](#), which is the video app's in-house influencer marketing platform. TikTok's Creator Marketplace allows brands to discover top TikTok personalities for their marketing campaigns, which is what Meta looks to be aiming to do with its own creator marketplace. It's clear that Meta's Creator Marketplace will be part of its continued efforts to

take on TikTok and woo more creators to its platform.

Meta is also launching interoperable subscriptions to let creators give their paying subscribers on other platforms access to subscriber-only Facebook Groups. The company notes that these exclusive groups are Meta's first investment in interoperable monetization tools for creators, which lets creators receive payments from their fans on other platforms and offer access to exclusive features on Facebook.

As for the company's current monetization offerings, Zuckerberg announced that Meta is opening up the Facebook Reels Play Bonus program to more creators on Facebook and also letting creators cross-post their Instagram Reels to Facebook and monetize them there as well. The Reels Play Bonus program is a part of Meta's [larger \\$1 billion creator fund](#).

Starting next week, U.S.-based creators can apply for the Facebook Reels Play bonus program if they have created more than five Reels and have a total of at least 100,000 views in the last 30 days. Creators must meet Meta's Partner Monetization Policies and Content Monetization Policies to be eligible for the program. Prior to this expansion, the program was invite-only. Meta says it has received a lot of interest in the program and is now allowing people to apply to join the program.

Zuckerberg also announced that Meta is opening up [Facebook Stars](#), the virtual items that allow fans to express their support for their favorite creators, to all eligible creators. Starting this week, creators who have at least 1,000 followers over the last 60 days will be eligible to onboard. Creators must be in a region where Stars are available and must also meet Meta’s Partner Monetization Policies and Content Monetization Policies. Meta is also bringing back Stars Fest, a month-long celebration from June 15 to July 15 to recognize Stars creators.

“We’re heading toward a future where more people can do creative work they enjoy, and I want platforms like ours to play a role in making that happen,” Zuckerberg said in a Facebook post about today’s announcement.

Zuckerberg also announced that Meta is expanding its [NFT test on Instagram](#) so more creators around the world can display their NFTs on Instagram. The supported blockchains for showcasing NFTs on Instagram are Ethereum and Polygon, with support for Flow and Solana coming soon. Zuckerberg noted that the company will bring this test to Facebook soon too, starting with a small group of U.S.-based creators. The Facebook test will allow creators to cross-post on Instagram and Facebook. Meta is also going to test NFTs in Instagram Stories with SparkAR soon.
