Lovable becomes a unicorn with \$200M Series A just 8 months after launch

Fast-growing Swedish AI vibe coding startup [Lovable](#) has become Europe's latest unicorn. Only eight months since its launch, the startup has raised a \$200 million Series A round led by Accel at a \$1.8 billion valuation.

Like [Cursor](#) and other platforms that help developers write code and build apps by harnessing the coding and reasoning abilities of large language models, Stockholm-based Lovable helps people use natural language to create websites and apps. The startup's trajectory so far has charted straight toward the sky, with the company claiming it now has more than 2.3 million active users.

IMAGE CREDITS: ANTON OSIKA / LOVABLE TEAM

Those users are using Lovable for free, to be clear, but in a [recent talk](#), the startup's CEO Anton Osika said it now has more than 180,000 paying subscribers, and the company had reached annual recurring revenues of [\\$75 million](#) in seven months. That traction likely contributed to this oversized Series A.

The Series A saw participation from existing investors, which include 20VC, byFounders, Creandum, Hummingbird, and Visionaries Club. In February, Creandum led [a \\$15 million pre-series A round](#) in the company, which at the time said it had reached annual recurring revenue of \$17 million and had 30,000 paying customers, with [“just \\$2 million spent.”](#)

- Roku launches Howdy, a \$2.99 ad-free streaming service
- Spotify raises subscription prices
- The uproar over Vogue's AI-generated ad isn't just about fashion

The startup has managed this hockey-stick growth with a pretty sparse team of only 45 full-time employees. That’s almost as many as the high-profile angel investors who it said participated in this round, including Klarna CEO Sebastian Siemiatkowski, Remote CEO Job van der Voort, Slack co-founder Stewart Butterfield, and HubSpot co-founder Dharmesh Shah.

Most of Lovable’s traction seems to come from non-technical users, who use it to create prototypes that they can collaborate on later with developers to build more fleshed-out apps and websites. This, and tests, are likely the bulk of the 10 million projects that have been created on the platform to date, the company said in a press release.

But Lovable also envisions itself becoming a tool that can be used to create production-grade applications that underpin full-fledged businesses.

unicorn, Swedish vibe coding startup Lovable is now also a centaur — a company with more than \$100 million in annual recurring revenue (ARR).

Lovable took only eight months since its launch to get here, thanks to the skyrocketing popularity of its AI-powered website and app builder. The startup claims it now has more than 2.3 million active users, and last reported 180,000 paying subscribers.

With only 45 full-time employees, and 14 open positions on its careers page, that makes for an impressive employee-to-revenue ratio.

Subscriptions seem to be driving the bulk of Lovable's revenue, but the company isn't prioritizing sales at all costs. Shortly after Lovable said it had reached ARR of \$75 million in June, its CEO Anton Osika wrote on X that Lovable had "lost \$1.5 million ARR in a single day" because it had moved all users

on its Team tier to its less expensive Pro tier, which now also accommodates collaboration.

The Teams plan is now being replaced by a Business tier, which sits between the Pro and custom Enterprise offerings. The new plan offers business-focused features such as self-serve, Single Sign-On (SSO), templates, private projects that won't be visible to the entire team, and the option to opt-out from having your data be used for training.

Lovable already has a slate of large customers like Klarna, HubSpot, and Potoroom, but there are still notable barriers and concerns around vibe coding among enterprises — where the big money is. This new tier could help Lovable find intermediary use cases and drive more businesses to use its tools for more than prototyping, which is what the startup says most people use it for today.

This has been one focus for the company, and Osika recently said that businesses were driving significant revenue from projects built with Lovable.

App monitoring platform Sentry gets \$60 million Series D at \$1 billion valuation

Catherine Shu — 5:04 AM PST · February 18, 2021

Application performance monitoring startup [Sentry](#) announced today that it has reached unicorn status, raising a \$60 million Series D with a post-funding valuation of \$1 billion. The round was led by Accel and New Enterprise Associates, both returning investors, and Bond.

Accel led Sentry's seed funding in 2015, and has invested in each of its rounds since then. The startup, which serves 68,000 organizations, has now raised a total of \$127 million. Its clients include Disney, Cloudflare, Peloton, Slack, Eventbrite, Supercell and Rockstar Games.

Sentry's software monitors apps for potential issues, helping developers catch bugs before they result in outages, downtime and frustrated users. Its Series D will be used on product development, like adding support for more languages and frameworks, and hiring for its offices in San Francisco, Toronto and Vienna.

While Sentry's products are used by a wide range of sectors, it is seeing continued growth in gaming and streaming media, and new demand in industries that are digitizing more of their infrastructure and

“One example of an investment area is how we connect relevant errors to performance issues so developers can see how code changes impact their customers across their entire application,” he added.

Sentry also plans to release more data and analytics features, and introduce more capabilities to its free self-hosted version.
