**NotebookLM adds
featured notebooks from
The Economist, The
Atlantic, and others**

Google is transforming its popular AI-powered research and note-taking assistant, NotebookLM, into more of a destination. The company [announced](#) Monday it would add a series of featured notebooks from various authors, publications, researchers, and nonprofits that allow NotebookLM users to explore a wide array of topics from health and life advice to travel tips and financial analysis, and more.

The initial collection, which includes notebooks from The Economist, The Atlantic, as well as professors, authors, and even Shakespeare's works, is designed to offer users working examples of how NotebookLM can be used to delve deeper into subjects of interest.

NotebookLM users will be able to read the original source material, but also ask questions, explore topics, and get answers that include citations, according to Google. You can also listen to pre-generated Audio Overviews or browse the notebook's main themes with the app's Mind Maps feature.

The new addition to NotebookLM builds on the recently launched feature that allows users to publicly share their notebooks with others on the app. Since its debut last month, Google says more than 140,000 public notebooks have been shared. The company plans to expand its own collection of featured notebooks in the months ahead, which will include more collections from its partnership with The Economist and The Atlantic.

The featured collection of notebooks will roll out to NotebookLM on the desktop starting today.

Per Google's descriptions, the initial lineup includes the following:

- [Longevity advice from Eric Topol](#), bestselling author of "Super Agers: An Evidence-Based Approach to Longevity"
- [Expert analysis and predictions for the year 2025](#) as shared in The World Ahead annual report by The Economist
- [An advice notebook](#) based on bestselling author Arthur C. Brooks' "How to Build A Life" columns in The Atlantic

Google's NotebookLM enhances AI note-taking with YouTube, audio file sources, sharable audio discussions

Jagmeet Singh — 9:00 AM PDT · September 26, 2024

Google on Thursday announced new updates to its AI note-taking and research assistant, [NotebookLM](#), allowing users to get summaries of YouTube videos and audio files and even create sharable AI-generated audio discussions, as the search giant aims to broaden the use cases and reach of the tool, which was originally launched [as a project](#) at its I/O developer conference last year and [expanded to markets including India, U.K., and more than 200 countries](#) months after its [debut for public access in the U.S.](#)

[NotebookLM](#), which was initially used by educators and learners, has more recently seen a significant shift in its user base and is now attracting more people in a workplace environment.

Raiza Martin, a senior product manager for AI at Google Labs, said in an exclusive interview that the tool's users are now roughly split, with 50% being educators and learners, and the other half consisting of business professionals.

“People are now sharing notebooks, and it’s creating a network effect,” she told TechCrunch.

This gave the NotebookLM team a push to introduce new features, with the hopes of enhancing its network effect and making the tool popular among people of different demographics.

Earlier this month, NotebookLM [added Audio Overview](#) to let users turn their documents into engaging audio discussions. The latest update expands that experience by allowing users to share the Audio Overview generated in NotebookLM with a public URL.

To use the feature, you click on the share icon available on the Audio Overview generated in the tool to get its URL, which you can then copy and share with others.

colleagues, or clients.

NotebookLM also added support for YouTube videos and audio files (such as .mp3 and .wav) as new source types, alongside its existing support for Google Docs, PDFs, text files, Google Slides, and web pages. The new features help users summarize key points from YouTube videos and generate takeaways and insights from the audio recordings they have of their study sessions or projects.

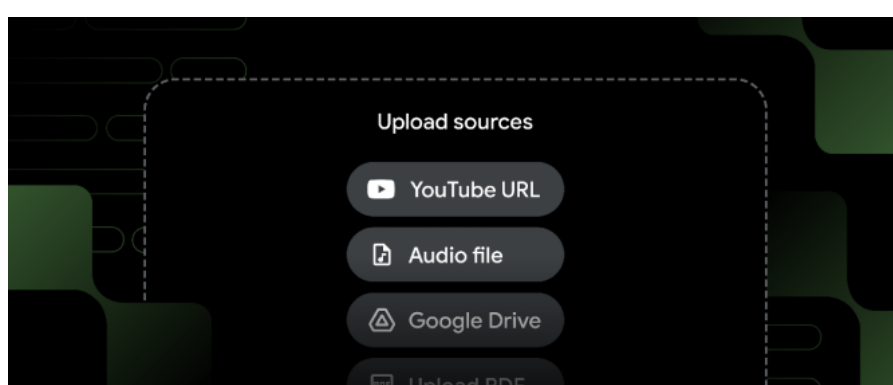

IMAGE CREDITS:GOOGLE

Martin told TechCrunch that because Google Labs has a small team working for NotebookLM, powered by the company's multimodal large language model Gemini 1.5 Pro, every new feature the team adds to the tool is based on user feedback.

“What’s interesting about AI tools is that a lot of assumptions change,” she said. “What might have

been useful last year might not be useful this year.”

In June, Google expanded NotebookLM access to more than 200 countries after launching it initially in the U.S. late last year.

Martin told TechCrunch, without disclosing specific numbers, that while NotebookLM still has a majority of its usage in the U.S., Japan has emerged as the next big market for the tool. The executive also underlined that some of its users are using NotebookLM to get AI-based summarization in languages different from what they set on the tool.

“In Japan particularly, we see a lot of documents that are not in Japanese, but NotebookLM is set to Japanese,” she said. “So people are querying in their native language, using it with probably complex and dense documents in English.”

Google said that the information users upload to NotebookLM stays private and is not used to train an AI model. To access the tool, users must be at least 18 years old.

Still, NotebookLM faces challenges inherent to its nature as an AI tool. One is that if users rely too much on NotebookLM, they might quickly lose the habit of reading long-form content and research papers. This could also lead to the problem of oversimplification.

Martin told TechCrunch that her team is very well aware of these concerns.

NotebookLM provides clickable citations from the content users upload to let users go deeper into the summarized notes.

“We try to encourage you to read your original text. We encourage you to double-check all the answers that come out of NotebookLM... You could read

SparkNotes or the actual book; it's always up to you," she said.

NotebookLM is currently limited to the web, though Martin indicated that its mobile apps may come sometime next year.

Meanwhile, the team is busy adding more new features. These will be focused on adding more support on the input side and new sources for outputs, Martin said.

Google debuts NotebookLM for enterprises

Kyle Wiggers — 7:30 AM PST · December 13, 2024

In October, Google started piloting a version of [NotebookLM](#), its viral AI note-taking and research app, aimed at businesses. Now, the company's bringing NotebookLM to the enterprise, complete with work-focused security and privacy features.

NotebookLM for enterprises — which Google's dubbing NotebookLM Plus — delivers the same experience as the consumer version, but with added controls for access and data management. Employees can upload data and files to create notebooks, podcast-like audio summaries (called Audio Overviews), and more, and search across and share these projects with org members.

Additional benefits include five times more podcast-like audio summaries, notebooks, and data sources per notebook; the ability to customize the style and tone of AI-generated notebook responses; and shared team notebooks with usage analytics.

NotebookLM for enterprises is a part of Agentspace, Google Cloud's new platform for AI-powered "[agents](#)." It's launching today in early access.

“Millions of users have used NotebookLM to make sense of complex information,” Raj Pai, VP of Cloud AI at Google, said during a press briefing. “And with Agentspace integration, we’re bringing these popular capabilities to our customers, meeting their compliance security and privacy requirements — and we’re connecting them with enterprise data and applications.”

In Agentspace, NotebookLM lives alongside agents that can analyze documents and emails, translate files, and bring in data from third-party repositories. Users can launch and search for agents from a single interface, and soon, they’ll be able to build custom agents using a low-code tool, Google says.

For business, school, university, and enterprise NotebookLM users who’d prefer not to sign up for Agentspace, NotebookLM Plus is also available in Google Workspace (in the Gemini for Workspace plan). As an alternative, org users can purchase NotebookLM Plus separately via Google Cloud.

Starting early next year, NotebookLM Plus will also come to individual users subscribed to Google's \$20-a-month [Google One AI Premium](#) plan.

NotebookLM is one of Google's most popular AI-powered products in recent memory.

Months after its [launch](#), NotebookLM became the "it" thing on social media for its audio-generation feature, which creates a realistic-sounding, back-and-forth dialogue between two synthetic podcast hosts from a source video or audio file, URL, or document.

NotebookLM's podcast-like audio generator has [since been cloned](#) many times over, and the key leaders behind the app have [left](#) the company as well. But Google continues to update NotebookLM with new functionality.

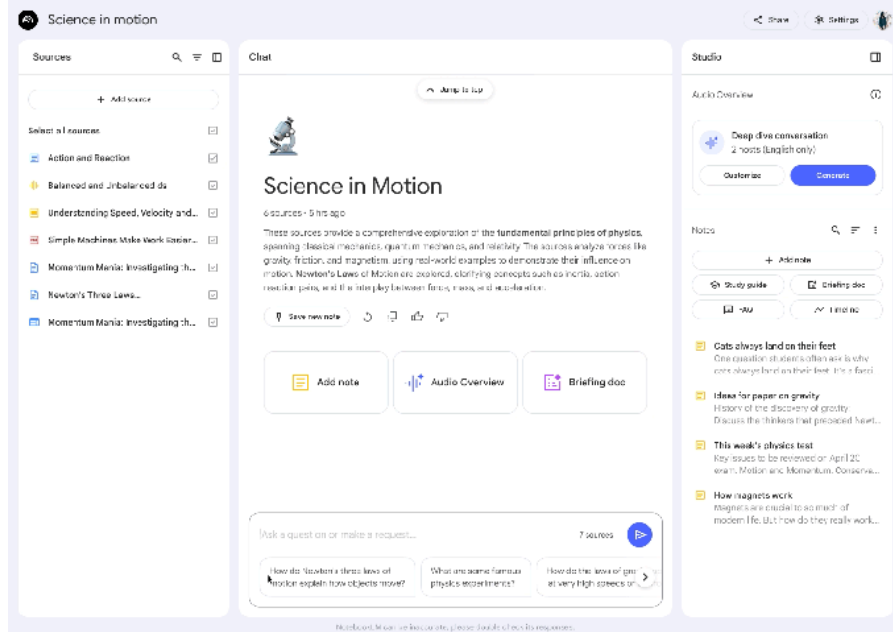

IMAGE CREDITS :GOOGLE

Case in point, on Friday, NotebookLM got a redesign that reorganizes the app’s tools across three panels: a Sources panel for managing imported info, a Chat panel for discussing that info through a conversational interface, and a Studio panel that lets users create things (e.g. study guides, briefing docs, and podcast-like audio) with a single click.

Elsewhere in NotebookLM, a new, experimental feature lets users “join” the conversation in podcast-like audio by asking the synthetic hosts for more details or to expand on a concept. Here’s how it works:

- 01 A user creates a new Audio Overview.
- 02 They tap the “Interactive mode (beta)” button.
- 03 While listening, they tap Join. A host will call on them.
- 04 A user asks a question. The hosts will respond with a personalized answer based on their data sources.
- 05 After answering, the hosts will resume their back-and-forth banter.

Google notes that the feature, which is only available in English for now, won't work with existing Audio Overviews, and that the hosts may pause awkwardly before responding or "occasionally introduce inaccuracies."

As always, it behooves any user to fact-check answers from AI-powered tools — podcast-like or no.
