Prime Day event drove
over \$24B in US e-
commerce sales, GenAI
traffic was up 3,300%

Sarah Perez — 9:44 AM PDT · July 14, 2025

Amazon's Prime Day, which leads to an overall boost to U.S. e-commerce thanks to competitive sales, saw a significant increase in retail traffic driven by innovative AI products, including chatbots and browsers. According to a post-Prime Day analysis by Adobe Analytics, GenAI traffic to U.S. retail sites increased by 3,300% year-over-year — which was more than the firm had originally forecast.

Adobe's e-commerce division provided an analysis of the U.S. retail landscape encompassing over 1 trillion visits to U.S. retail websites, including 100 million SKUs across 10 product categories. During the Amazon Prime Day event (July 8-11), U.S. retailers saw \$24.1 billion in online spend, representing 30.3% year-over-year growth, or the equivalent of two Black Fridays. (Black Friday 2024 saw \$10.8 billion in online spend, which was then a new benchmark for the holiday shopping event.)

The actual results from the firm's Prime Day analysis came in slightly higher than its estimates, which predicted \$23.8 billion would be spent with U.S. e-commerce retailers over the four-day period, representing 28.4% year-over-year growth.

As a result, the figures for the use of GenAI driving online shopping were higher as well, indicating increased consumer interest in using generative AI-powered chat services and browsers as online shopping assistants. However, this AI-driven traffic still remains much smaller than other channels like email or paid search, Adobe noted.

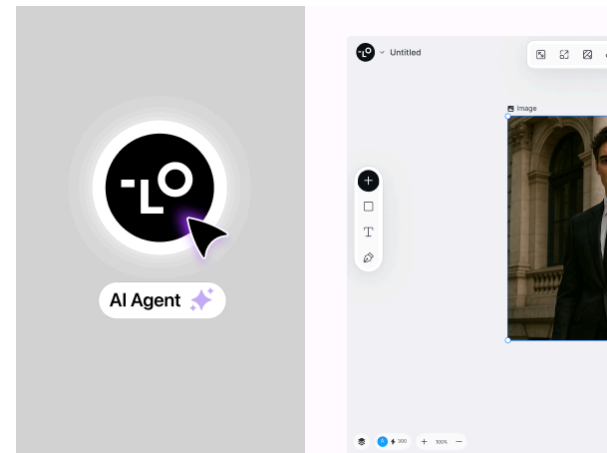

Paid search, for example, accounted for a 28.5% share of U.S. e-commerce sales during the Prime Day event, up 5.6% year-over-year.

Another growing channel for driving retail clicks this year involved social media influencers, who drove 19.9% of U.S. online retail sales during the event. That figure was up 15% year-over-year, and data indicated that influencers converted shoppers into making purchases 10 times more effectively than social media overall.

Amazon [didn't share specific Prime Day figures](#), only saying that it was the biggest event ever with record sales and more items sold than before. However, the company also expanded Prime Day to a four-day event this year, making comparisons to prior years difficult.

According to one third-party analysis from Momentum Commerce, [reported by Adweek](#), Prime Day sales during its first two days were initially down 35% year-over-year, then increased by day three to be up 165% year-over-year. This suggests that shoppers may have been waiting until the later sale days to see if their items would receive deeper discounts.

Adobe noted that top categories driving U.S. e-commerce sales during the Prime Day event this year included appliances, where online sales were up 112%, compared to average daily sales in June. Other categories that saw strong growth included office supplies (up 105%), electronics (up 95%), books (up 81%), tools and home improvement (up 76%), home and garden (up 58%), and baby and toddler (up 55%).

A new report estimates that AI will be a larger-than-ever part of the online shopping process during Amazon’s Prime Day sale, which began Tuesday morning. Amazon’s annual sale, which this year spans four days (July 8-11), is predicted to drive \$23.8 billion in online spending across U.S. e-commerce retailers, as other businesses run their own competing sales alongside the popular shopping event.

Adobe, whose e-commerce division regularly releases estimates for online shopping events like Black Friday and others, offers a view into online commerce by tracking transactions online. The firm’s analysis encompasses over 1 trillion visits to U.S. retail websites, including 100 million SKUs across 18 product categories.

This year, Adobe forecasts that Prime Day will be the equivalent of “two Black Fridays.” The \$23.8 billion spent over the four-day period will represent 28.4% year-over-year growth and \$9.6 billion more than the comparable period last year.

Mobile will be a large part of that equation, accounting for more than half (52.5%) of sales, but this year, generative AI will also play a role.

During the Prime Day event, Adobe estimates that traffic from generative AI sources will increase 3,200% year-over-year. This is still a much smaller source than other channels, like paid search and email, but Adobe believes it will continue to grow as consumers see the value in using AI for shopping.

The company noted that GenAI-powered chatbots and browsers saw an initial surge in use during the

2024 holiday season, when traffic from those sources jumped 1,300% compared with the prior year from November 1 through December 31, 2024.

The company also cited a survey of 5,000 U.S. consumers, which indicated that people were using GenAI for research (55% of respondents), product recommendations (47%), finding deals (43%), getting gift ideas (35%), finding unique products (35%), and creating shopping lists (33%).

Despite pandemic, Amazon Prime Day expected to generate nearly \$10B in global sales

Sarah Perez — 9:01 AM PDT · October 6, 2020

A new forecast released today estimates Amazon's delayed Prime Day sales event will top last year's by bringing in an estimated nearly \$10 billion in worldwide sales when it runs later this month. According to eMarketer, which [released](#) its first-ever Prime Day forecast, consumers will continue to spend heavily on e-commerce and seek out deals ahead of the 2020 holiday season, benefitting the major sales event.

Forecasting for this year's [Prime Day](#), of course, has been much more difficult due to the coronavirus pandemic's impact on the e-commerce industry. The health crisis has disrupted supply chains, causing delays, while consumer demand can be unpredictable. Some past boosts in e-commerce spending for major retailers was also closely tied to government stimulus checks.

Due to the pandemic, Amazon this year [decided to move its annual sales holiday](#) from mid-July to October for most markets. Meanwhile, the retailer ran Prime Day in India in August — later than it had been held in prior years, but ahead of other

Despite the changes to Prime Day, the analysts at eMarketer believe Prime Day's predictability will help continue to drive traffic and sales this year.

"Since Prime Day's 2015 debut, Amazon has expanded the scale and spectacle of the event in a mostly predictable fashion," said Andrew Lipsman, eMarketer principal analyst. "The generally incremental changes from year to year gave customers and sellers a better sense of what to expect, with Lightning Deals and heavily discounted Echos and Fire TVs taking center stage. Sellers developed a playbook for their promotions and

advertising strategy and could plan their inventory accordingly,” he added.
