Introduction

Foreword by Steve Pearce
Introducing the Singer Growth Economy
Executive summary by Henry Whorwood
Methodological overview

Steve Pearce, Chief Executive Officer at Singer Capital Markets

Foreword

It is a pleasure to support the publication of The Singer Growth Economy Top 50 and to see such an exciting array of UK businesses shaping the future.

The crises and shocks of the last few years have left our country facing an unprecedented set of challenges. The Government must now solve a seemingly impossible equation as recession looms, inflation soars and monetary policy tightens.

While there is much disagreement around the policy choices of today, there is one thing everyone can

agree on: productivity and growth must be achieved in the future if we are to restore the health of our economy. It is therefore more important than ever that the capital markets' ecosystem supports entrepreneurs, growth companies and their investors.

Our list of the top 50 companies spans across a wide variety of sectors — from mobile apps and AI technology, to innovative healthcare solutions and nutrition. With an impressive mean turnover of £39.1m (based on those filing full accounts) and a mean employee count of 197, these business champions look set to dominate in their respective fields over the coming months and years to come.

Of particular note is the sector-wide development in AI and machine learning technology as this becomes more and more integrated into our daily lives. Companies such as Quantexa, a Yorkshire-based business that develops technology using AI and big data software to flag illegal activity within a user's network, are leading the way in business resilience and cyber security. On the other end of the spectrum, we have Wayve — a London-based tech business who are challenging conventional transport with the development of

“It is more important than ever that the capital markets’ ecosystem supports entrepreneurs, growth companies and their investors.”

software for self-driving cars that use machine learning technology. The global paradigm shift in energy consumption is becoming more prevalent than ever as the UK and the rest of the world set ambitious Net Zero targets. At the heart of this, it's fantastic to see UK businesses leading the way in the solutions our country so desperately needs.

The app economy is also thriving as we see a large handful of businesses featured in the top 50. Challenger banks Monzo, Monese, Moneybox and Revolut all feature as alternative banking solutions whilst mobile apps Pedal Me and Thrive provide convenient health and wellbeing solutions.

As we look to the future and what this might hold, Singer Capital Markets is delighted to operate at the heart of this ecosystem, providing access to capital, advice and liquidity. This autumn

we launched The Singer Growth Economy initiative to highlight the key growth drivers of tomorrow's economy and the innovators, disruptors and challengers that we believe will be the winners. Through this framework, we highlight opportunities across four overarching themes: Health and Wellbeing of the Population, Transition to a Sustainable Economy, Innovation and Emerging Technologies, and Geopolitics and Demographics. More information about The Singer Growth Economy can be found on page 3.

While the UK economy faces a difficult time ahead, this report highlights 50 companies and 10 rising stars that are set to buck the trend. The Singer Growth Economy investment landscape enjoyed a particularly healthy period in 2021 with £24.9b equity investment secured. Despite headwinds, growth companies were still able to secure a record equity investment in the first half of 2022, proving the resilience and confidence in these exciting UK businesses.

Introducing the Singer Growth Economy

In these uncertain times, it is more important than ever for us to nurture and support growth companies. Our economy must recoup the considerable costs of recent crises, and our firm belief is that this can only be achieved by stimulating productivity in our great nation's innovators, disrupters, and challengers.

The Singer Growth Economy highlights opportunities across four overarching themes: health and wellbeing of the population, transition to a sustainable economy, innovation and emerging technologies, and geopolitics and demographics. Within these themes, we have identified what we believe to be the most powerful growth drivers shaping the future of our economy, playing out not over months or even years, but over decades.

To learn more about The Singer Growth Economy and to explore other related content, visit the [Singer Capital Markets website](#).

Health and wellbeing of the population

Genomic-based technologies, personalised and preventative, biology-led discovery, efficiency through the cycle from discovery to consumer, health monitoring, nutrition.

In recent years, healthcare systems and the life sciences industry have undergone tremendous changes given technological, regulatory and socioeconomic disruptions. The net outcome of these changes is the continued convergence of healthcare, technology and retail and consumer industries such that in the next decade healthcare will be centred on human needs, and will be personalised, digitised and preventative, with healthcare solutions being seamlessly integrated into daily life.

Transition to a sustainable economy

Climate change and energy transition, water, energy and food security, advanced materials, 21st century infrastructure, waste management, recycling and product life, growing and aging population.

The sustainable economy is an alternative vision for growth and development built on transformational technological drivers that are required to address climate and environmental challenges. It involves using building materials and energy efficiencies to deliver circular economy solutions that will result in fewer negative impacts on the natural environment and that will better support social wellbeing.

Geopolitics and demographics

Security of supply chains and re-industrialisation of the developed world, national security and defence, developing working practices and attitudes, increasing and more complex regulation, democratisation of finance and emerging global wealth, consumer evolution, education.

The combination of policy and technology can tackle some of most pressing geopolitical and demographic challenges. By improving the security of supply chains, re-industrialising developed economies, and helping companies and individuals to innovate in complex regulatory environments, we can give everyone a chance to prosper. Similarly, by using technology to support access to finance and encourage greater consumer rights, we can help to create a more stable and just world.

Innovation and emerging technologies

Digitisation and process automation, business resilience and cyber security, data infrastructure and analytics, cloud computing, blockchain technology, communications infrastructure, creative entertainment.

Human progress is driven by the power of ideas and their translation into new technologies. By overcoming challenges using technology, humans have created greater prosperity for ourselves and for future generations. Change is accelerating and new technologies are helping to digitise and automate processes, make businesses more resilient to cyber security threats, improve data infrastructure and analytics, and to make it easier to communicate and share the most important stories.

Henry Whorwood, Head of Research and Consultancy at Beauhurst

Executive summary

The Singer Growth Economy report shines a light on an incredible and diverse group of growing companies — all the more important in turbulent times. From ZOE which uses machine learning to provide users with personalised dietary recommendations to online games developer Build A Rocket Boy, the more than 40,000 companies (including the Top 50) that make up the Singer Growth Economy are high-growth and innovating in different sectors and regions across the UK.

When we talk about private companies as an asset class — and generating investment statistics — we treat companies as a homogenous group.

While this provides a sensible high-level view of investment volumes, it is in some regards a way of comparing apples with oranges. A growth-stage SaaS platform and a seed-stage battery technology spinout are fundamentally different.

Part of the beauty of the Singer Growth Economy is that it focuses an analytical lens on companies that are innovating in four key thematic areas that will change the future of the UK economy: health and wellbeing of the population; transition to a sustainable economy; innovation and emerging technologies; and geopolitics and demographics.

Future and growth-focused companies are investable regardless of the economic environment. Good ideas with a strong team behind them can win out despite headwinds. The Top 50 companies presented here are not only growing headcount or turnover at a phenomenal rate, these companies have also grown their valuations by at least 15% during the last three years.

While the macroeconomic environment has changed, these companies have the trajectory that may make many of them household names in the years to come; some already are. The UK economy needs more growth champions — perhaps now more than ever. We look forward to seeing the Singer Growth Economy companies ascend to new heights.

Methodological overview

This report analyses the 40.6k private, high-growth companies that comprise the Singer Growth Economy. Companies that met one of Beauhurst's eight triggers (see opposite) and that have operations in at least one of the Singer Growth Economy Themes (page 3) are in scope.

The report also includes a ranking of the Top 50 high-growth companies using a three-year compound annual growth rate (CAGR) for the higher of turnover or employee headcount. To be eligible for the ranking, companies need to have grown their valuation by at least a 15% CAGR between 01/07/2019 and 30/06/2022 based on at least two equity finance deals during the period.

Filings at Companies House have been used to determine the pre-money and post-money valuations of the companies at the time of the equity finance deal. More detailed methodological information is available in the methodological notes in the appendix.

Beauhurst identifies ambitious businesses using eight triggers (outlined at the bottom of this page) that we believe suggests a company has high-growth potential. More detail on Beauhurst's tracking triggers is available via [our website](#).

Equity investment

To be included in our analysis, any investment must be:

- Some form of equity investment
- Secured by a non-listed UK company
- Issued between 1 January 2012 and 31 December 2021

Announced and unannounced fundraisings

An unannounced fundraising is an investment made into a private company that is completed without press coverage or a statement from the recipient company or funds that made the investment. These transactions are an integral part of the UK's high-growth economy, accounting for around 70% of all equity transactions.

Analysis by Jens Ehrenberg CFA

Health and wellbeing of the population

5,308

active high-growth
companies

£14.3b

total equity raised
2012 - H1/2022

Population health refers to the general health and wellbeing of the whole population. Factors affecting access to a healthy lifestyle include socio-economic and environmental disparities, alongside individual lifestyle factors. In 2020, the UK population was over 67m with an average life expectancy of 80.4 years. The Office for National Statistics suggests the population will increase by 3.2% in the next decade to 69.2m. As the population increases and ages, discrepancies in health between the poorest and richest regions may continue. In regions where there is higher educational attainment, higher average salaries, and fewer economic inequalities people generally live a higher quality of life.

Technology will play a key role in closing the gap between socio-economic classes. The COVID-19 pandemic saw a rise in digital apps providing

personalised medical services. This created a surge in the availability and accessibility of medical help — to those who would traditionally have had limited access to support. Similarly, the medical and pharmaceutical industry made significant advancements during COVID-19. Should the pace of innovation continue, we may see more personalised digital healthcare.

Companies devoted to improving the future of health and wellbeing include Bit.bio. Ranked 6 on the Growth Economy Top 50, It is focused on developing scalable technologies to create new gene therapies and enhance drug discovery. Bit.bio has joined the United Nations Race to Zero campaign committing to contribute to global sustainability. Similarly, Mogrify, ranked 19 aims to combat illnesses such as retinal and optic nerve degeneration through cell reprogramming.

Transition to a sustainable economy

2,741

active high-growth
companies

£8.85b

total equity raised
2012 - H1/2022

The United Nations defines a sustainable economy as one that “meets the needs of the present without compromising the ability of future generations to meet their own needs.” It should offer a good quality of life to all people, and enhance social inclusion while maintaining the healthy functioning of the Earth’s ecosystem.

Creating a sustainable world requires decoupling of the Earth’s resources, a transition from a linear to a circular economy, financial support, and a commitment to change by governments and businesses. Decoupling of natural resources refers to reduced use of natural resources per unit of economic activity. For example, reducing the use of fossil energies in business by adopting a more renewable energy source such as solar power. A circular economy consumes less, consumes

more efficiently, and creates systematic change. It focuses on how we can use renewable resources effectively to protect the Earth’s ecosystem.

Companies leading change in this area include, Dropless ranked 4 on the Growth Economy Top 50. Dropless is a sustainable vehicle care service. Its unique selling point is its use of non-hazardous water solutions. Its method of cleaning vehicles reduces water waste and toxic spillage in water sources. Likewise, Oddbox, ranked 8 aims to combat food waste in the UK. Oddbox delivers boxes of oddly sized fruit and vegetables — that would have otherwise been wasted — to businesses and consumers. Since its inception in 2015, Oddbox says it has saved 34.1t of fruit and vegetables, 3.6m litres of water, and 37.8t of carbon emissions.

Innovation and emerging technologies

18.9k

active high-growth
companies

£75.6b

total equity raised
2012 - H1/2022

COVID-19 accelerated the need for digitisation in business and our daily lives. It impacted our mobility, availability, and capacity to interact with others. The development and adoption of new technologies that bridged physical distances provided unique ways to work, socialise, and communicate. The rise of hybrid working introduced a new wave of accessibility as millions of individuals could now work from the comfort of their homes. Innovative and emerging technologies bring a breadth of opportunities for businesses. For instance, they create employment, improve user experiences, and remove human error from high risk projects. Equally, whilst innovative and emerging technologies provide opportunities, they also present many complex challenges. There is a risk of potential labour dislocation, issues concerning legal regulation, and collective governance.

Companies leading in innovation and emerging technologies include Redwood Bank which has claimed the top spot in the Growth Economy Top 50. Redwood Bank provides specialist financial advice to small and medium-sized British enterprises by using the latest technologies. Following its incorporation in 2016, Redwood Bank has raised £39.8m in equity investment. Another company bringing an innovative approach to a traditional industry is Rovco. Ranked at 21, Rovco provides underwater surveying services for energy companies. It uses artificial intelligence and robotics to provide detailed, efficient, and high-quality services for maritime security, offshore renewables, and scientific research. Since its incorporation in 2016, Rovco has secured £32.9m of equity investment.

Geopolitics and demographics

34.5k

active high-growth
companies

£73.3b

total equity raised
2012 - H1/2022

The advance of emerging markets China, India, and Brazil have expanded the economic importance of the countries, creating a shift in geopolitics. Similarly, the rise of digitisation, the impact of global warming, migration, and political conflicts have contributed to increasing tensions amongst superpowers.

Climate change has had a notable influence on geopolitics and shifting demographics. Changes to the Earth's ecosystem have led to environmental degradation and increased migration. Another contentious issue for governments is the ageing population. The United Nations predicts that the ageing population (aged 65+) will soon outnumber children below the age of five. This places a strain on governments and economies to provide efficient resources when resources are becoming increasingly scarce. Ageing populations are most prevalent in western countries. Contrastingly in Africa and India, those

aged 15 and under outnumber the ageing population. The Russia-Ukraine War is a paradigm of how geopolitical conflict affects the international community. Russia controls the majority of European gas exports and the current war has led to sanctions, limited exports, increased energy prices and further tensions among global powers.

A diverse group of companies are working to tackle these issues and ameliorate risk. Element is working to ensure that governments, businesses, and individuals can communicate privately on secure platforms. Element is 43 on the Growth Economy Top 50. Working to support the development of the young population are companies like N Family Club. Ranked at 30, the nursery chain organises events for parents to support their child's early development. For every child they educate at N Family Club, they support a nursery-age child affected by conflict across the world.

Regional distribution

Singer Growth Economy companies by UK region (2022)

40.6k

Singer Growth Economy companies across the UK

31.1%

Singer Growth Economy companies in the UK are headquartered in London

The Singer Growth Economy companies are predominantly located in the south of the country. This aligns with the geographic distribution of the UK’s overall business population and is linked to population density and access to support services. It also reflects that the Singer Growth Economy companies are technology and IP-intensive companies that benefit from the density and proximity of universities, talent, and investors in the south. Of the companies with some operations in the Singer Growth Economy

theme innovation and emerging technologies, 61.1% are situated within London, the East and the South East.

Outside of the southern cluster, the North West is the most populated region with 3,292 Singer Growth Economy companies, followed by Scotland (2,703) and Yorkshire and The Humber (2,471).

Caspar Erskine CFA, ACA, Senior Research Analyst, Technology (TMT), at Singer Capital Markets

Digitisation and process
automation analysis

Whilst the US dominates the global technology vertical by market capitalisation, benefitting from unparalleled infrastructure, concentrated regions of expertise (including Silicon Valley and Austin, TX), best-in-class tech-orientated universities (MIT, CalTech), and a significant, homogenous market in which to launch services; the UK continues to punch well above its weight as a hub for innovation

and emerging, disruptive software solutions. This is particularly apparent with software-as-a-service companies within the Singer Growth Economy receiving £94.5b in equity investment from 2012-H1/2022, outperforming any other sector. A combination of a highly skilled and well-educated workforce (benefitting from its own world-class education hubs such as Cambridge and Oxford), governmental support (tax incentives, low-touch regulation) and investors' strong conceptual understanding of new ideas are critical drivers of capital availability to a range of innovative young companies. For example, with regards to the emerging theme Industry 4.0, London is second only to Silicon Valley in terms of the number of related startups it is home to (Silicon Valley: 89, London: 50, NYC: 39).

Whilst we see fewer business-to-consumer (B2C) 'category killers' emerging from the UK than the US, what is notable is a talent for identification and creation of solutions targeting specific niche business issues (B2B solutions). UK technology benefits from being able to interact closely

“Digital transformation remains a highly investable theme across UK public markets, offering continued attractive growth in fundamentals.”

with large, global businesses and source knowledgeable industry talent to help support and drive innovation. This supports first-mover advantage, and strong positions in technology sub-sectors. For example, a rich UK heritage in financial services has supported a highweighting towards disruptive fintech companies within this year's Top 50 rankings (Moneybox, Monese, Revolut et al).

Digital transformation remains a highly investable theme across UK public markets, offering continued attractive growth in fundamentals despite the weakening macroeconomic backdrop. UK publicly-listed companies with exposure to the digitisation and process automation theme include value-added consultancies like Kin + Carta and Next Fifteen; resellers like Bytes,

Softcat and Computacenter; and other notable names such as Blue Prism and Thoughtonomy (process automation), GlobalData (business intelligence) and Sage (business cloud).

From the Top 50 rankings, the following companies within the digital process and automation theme catch our eye:

ContractPodAI enables the automation of contract management for law firms and corporations. Automation of contract processing has applications across a variety of enterprise departments and all verticals, creating a significant market to play into.

Quantexa uses big data analytics and machine learning to unlock a company's first-party data resources, enabling enterprises to identify hidden opportunities and risks in order to support customer decision-making.

Cutover develops software aimed at improving the integration of human and machine workflows, by providing planning, orchestration and analytics.

Investment landscape

Equity investment secured by Singer Growth Economy companies
(2012-H1/2022)

● Amount raised ● Number of deals

42,843

total number of equity deals secured by Singer Growth Economy companies 2012-H1/2022

£94.5b

total value of equity deals secured by Singer Growth Economy companies 2012-H1/2022

The Singer Growth Economy companies secured significant equity investment over the past decade, with both deal numbers and the total amount raised rising dramatically. Between 2012 and 2021, the annual number of deals increased by nearly six times. Even more impressive is the increase in the total value of equity investment raised — from £1.08b in 2012 to £24.9b in 2021. The trend is linked to the increase in the number of Singer Growth Economy companies. It also reflects the increased investor appetite for the solutions and technologies of companies innovating in the space.

Between 2020 and 2021, active Singer Growth Economy companies grew the total amount

of equity investment raised by 93% to £24.9b. It is likely that this increase in investment is linked to increased investor enthusiasm for tech-enabled companies following the pandemic and the extraordinary economic stimulus measures introduced to counter the impact of lockdowns.

While there are many headwinds facing companies in 2022, Singer Growth Economy companies were fortunate to secure record equity investment of £16.5b in the first half of the year. Combined with strong deal numbers, this suggests that investor support for Singer Growth Economy companies may prove to be resilient, even in challenging times.

Investment by region and sector

Jens Ehrenberg CFA, Senior Research Analyst, Financials, at Singer Capital Markets

Democratisation of finance
and emerging global wealth
analysis

The financial services world has for a long time been dominated by large, established financial institutions. Following the financial crisis, the majority of these players were facing numerous pressure points which have led to higher competition, increased commoditisation, and ultimately, more and more consolidation. Outdated technology infrastructure and the limited flexibility often

inherent in large organisations, have resulted in increasingly one-dimensional products and services. This led to limited provision of accessible and suitable products and services for numerous client segments.

The idea of finance for everyone has found itself in many mission statements of rapidly growing finance/fintech companies. Strong growth among solutions, such as retail investment and trading platforms as well as challenger banks, underpins the requirement for the provision of accessible and suitable products and services to underserved client segments, including the mass affluent/retail and the wider SME space.

Additionally, the following structural trends have resulted in the emergence of niches and underserved market segments:

Challenger banks and FX solutions
Challenger bank platforms, such as Monzo, have taken a significant space in the market, benefitting from the high proportion of international professionals in the country who maintain a high demand for cross-border financial

services. Whilst large, established high-street banks are usually more rigid, opaque and relatively expensive, we see a number of technology-enabled platforms and challenger banks, such as Revolut and Monese, with a focus on cross-border FX capabilities for smaller clients, more nimble offerings and better customer service.

“Strong growth among solutions, such as retail investment and trading platforms as well as challenger banks, underpins the requirement for the provision of accessible, suitable products and services to underserved client segments, including the mass affluent retail and the wider SME space.”

Savings and investment

The savings gap in the UK and the shift of responsibility to plan for retirement onto the individual mark some of the most significant structural drivers in the financial

services arena. Additionally, demand from retail investors has increased significantly since the emergence of the COVID-19 pandemic. In-person financial advice, however, only becomes financially viable for clients with a certain level of wealth. This does not mitigate the need for pension and financial planning. Newly launched investment platforms and robo-advice solutions, such as Moneybox, Moneyfarm and Plum, provide more cost-effective solutions for the consumer and have seen strong growth in recent years.

Don't forget the SMEs

Democratisation of finance also includes SMEs that require more tailored financing solutions, which the established banks are unable to provide. A number of specialist lenders and platforms including Tide, Redwood Bank and Oxbury are some of the stronger growth names starting to fill this gap, while powering a significant part of the UK economy.

A laboratory setting with a beaker of blue liquid, a graduated cylinder, and a test tube rack. The background is a soft-focus blue and green, suggesting a scientific or industrial environment.

The Top 50 Companies and the Rising Stars

Profiles of 20 key companies
The 10 Rising Stars
The Top 50

The Singer Growth Economy Top 50: profiles

1

Redwood Bank

Launched in 2015, Redwood Bank provides banking services to small and medium-sized businesses (SMEs) such as secured SME mortgages for business owners and property investors. It has secured £39.8m in equity investment via eight fundraising rounds, with backers including Warrington Borough Council.

2

Build A Rocket Boy

Edinburgh-based Build A Rocket Boy is a gaming company. Since its inception in 2016, the company has raised £144m in equity investment via four funding rounds from backers such as the Creative Artists Agency and NetEase (NTES) Capital. The firm is currently developing its new game – Everywhere – set for a 2023 release.

3

CellPoint Digital

CellPoint Digital develops software facilitating and managing a range of payment methods, including facilitating payments for airlines and travel companies. Since 2011, the London based company has raised £51.8m in investment via nine fundraising rounds. It has recently partnered with the Radisson Hotel Group to seamlessly integrate its payment methods.

5

KBox Global

London-based KBox Global develops technology connecting commercial kitchens to food delivery brands to help them manage orders more effectively. Since launching in 2015, the company has attracted £32.1m in equity investment via three fundraising rounds including investment from Balderton Capital and Hoxton Ventures.

The Singer Growth Economy Top 50: profiles

6

Bit.bio

Based in Cambridgeshire, Bit.bio uses genetically reprogrammed human stem cells to develop new therapies and research tools. Since spinning out of the University of Cambridge in 2017, Bit.bio has attracted £141m in equity investment via six fundraising rounds from investors including Charles River Labs, Foresite Capital, and Puhua Capital.

9

Vet-AI

Based in Leeds, Vet-AI develops an app that uses artificial intelligence to analyse potential health issues in animals. Launched in 2018, the app, known as Joii, digitally connects users to trained vets. VET-AI has secured investment from Hill's Pet Nutrition and Correlation One Holdings, attracting a total investment of £7m.

11

Thirdfort

London-based Thirdfort is a digital verification platform. It aims to limit the possibility of fraud and money laundering through secure data systems. The company has secured £337k in grants from Innovate UK and the Small Business Research Initiative, as well as £19.4m in equity investment. It has recently partnered with the credit management company Pepper Advantage.

13

Motorway

Established in 2016, Motorway operates an online marketplace connecting private car sellers with multiple dealers. It has raised £205m in equity investment via six fundraising rounds, investors include Index Ventures, BMW i Ventures, and ICONIQ Growth. The London-based company reached unicorn status in November 2021 via a £143m equity funding round.

The Singer Growth Economy Top 50: profiles

Revolut

14

Revolut

Launched in 2013, Revolut provides digital banking services including investing, purchasing cryptocurrencies, and everyday banking. The now global London-based company has secured £1.27b in equity investment with investors including Schroders, SoftBank, and Tiger Global Management.

codat

15

Codat

London-based Codat develops an API that allows clients such as Zettle and Capchase to connect to financial systems. It has received three innovation grants totaling £12.5m. Since its inception, it has secured £118m in equity investment, including \$100m from JP Morgan in a funding round in June 2022.

MOGRIFY Reprogramming Health

19

Mogrify

Launched in 2016, Mogrify is a cellular reprogramming platform. It was created with the intention of treating cell regenerative diseases in areas such as ophthalmology. The Cambridge-based company has secured £30.2m in equity investment via six fundraising rounds; investors include 24Haymarket, Meltwind Advisory, and Parkwalk Opportunities EIS Fund.

ROVCO

21

Rovco

Based in Bristol, Rovco provides underwater surveying and inspection services for industries such as oil and gas, scientific research, and renewables. It received £15.2m in its latest funding round co-led by Legal & General and Equinor. Rovco has won £2.55m in innovation grants and has secured £45.3m in equity investment since 2015.

The Singer Growth Economy Top 50: profiles

29

Pedal Me

Launched in 2017, Pedal Me operates an e-cargo bike logistics company. The London-based company has attracted £1.98m in equity fundraising via six fundraising rounds, including a £573k investment raised via Crowdcube in May 2021. During the pandemic, Pedal Me partnered with San Francisco-based mobility brand Lime, to give free rides in London to and from vaccine appointments.

30

N Family Club

N Family Club runs 27 nurseries that are open year-round across the UK. The London-based company puts an emphasis on creating inspiring environments for parents and children through its bespoke curriculum and family-first ethos. It has raised a total of £78.1m via seven fundraising rounds and attracted £37.5m in May 2022 from Gresham House to support its nursery expansion.

PLUM GUIDE

32

The Plum Guide

The Plum Guide operates a website allowing users to book holiday homes, from a selection of homes tested and approved by the company's in-house experts. Since starting in 2015, the London-based company has attracted £58m in equity investment from nine fundraising rounds. Investors include Beringea, Talis Capital, and Hearst Ventures.

36

Quantexa

London-headquartered Quantexa's software ingests big data and derives insight from it using machine learning to support operational decision-making. It has supported organisations such as HSBC and Danske Bank to uncover hidden risks and new opportunities. Since 2016, the company has secured £182m in equity investment via five rounds.

The Singer Growth Economy Top 50: profiles

38

Zen Educate

Zen Educate is an internet platform enabling supply teachers across the UK to be matched with temporary jobs. Since launching in 2016, the London-headquartered company has attracted £37.5m in investment via six fundraising rounds. Its most recent funding round in October 2022 secured £19.3m and was led by Brightree Ventures and Adjuvo.

41

Wayve

London-based Wayve develops software for self-driving cars using machine learning technology. Since starting in 2017, the company has tested autonomous vehicles on public UK roads. It has attracted £174m in equity investment via five fundraising rounds and has partnered with Microsoft to scale up its AI models for autonomous vehicles.

45

Fluidic Analytics

Located in the East of England, Fluidic Analytics develops technologies that help better understand protein DNA. Since launching in 2013, the company has benefitted from £850k in grants as well as £52.2m in equity investment via 10 funding rounds. The Cambridge-based company recently raised £18.3m via undisclosed investors in July 2022.

50

CloudNC

Launched in 2015, CloudNC develops software to advance the capabilities of CNC milling machines, making their operation more automated through machine learning. The London-based company has received £49.7m in equity investment via six fundraising rounds from investors such as Autodesk, Lockheed Martin, and British Patient Capital.

Rising Stars of the Singer Growth Economy

Cirdan Imaging

Equity raised: £13.5m
Year incorporated: 2010
Turnover: £5.20m
Growth theme: Health and wellbeing of the population

Based in Northern Ireland and spun out from Queen's University Belfast, Cirdan Imaging develops medical imaging technology for use in the diagnosis and treatment of cancer. The company has secured a number of innovation grants, receiving a total of £1.12m and has raised £13.5m in equity investment across 10 fundraising rounds.

nDreams

Equity raised: £31.5m
Year incorporated: 2002
Turnover: £5.60m
Growth theme: Innovation and emerging technologies

Launched in 2002, nDreams develops and publishes computer and console games, specialising in virtual worlds and virtual reality. The company has received nine rounds of equity funding. In January 2022, the Hampshire-based company announced the inception of nDreams Studio Elevation, a studio dedicated to the next generation of virtual reality gaming.

Oxford BioTherapeutics

Equity raised: £34.9m
Year incorporated: 2003
Turnover: £6.61m
Growth theme: Health and wellbeing of the population

Oxford BioTherapeutics develops a treatment for cancer using antibody drug conjugates (ADCs) that are designed to target cancer cells directly, while simultaneously re-engaging the patient's immune system. The Oxfordshire company has secured £34.9m in equity backing via 15 deals and recently announced a research collaboration deal with ImmunoGen — a leader in the ADC field.

Rising Stars of the Singer Growth Economy

BibliU

Equity raised: £39.3m
 Year incorporated: 2014
 Turnover: £6.96m
 Growth theme: Geopolitics and demographics

London-based BibliU offers a subscription service providing students with access to academic textbooks online. Backed by the University of Oxford Innovation Fund, it has received £39.3m in equity investment via 11 fundraising rounds. The company has benefitted from the rise in popularity of online learning, with the number of students using the service increasing from 1,000 in 2014 to over a million in 2021.

Crescendo Biologics

Equity raised: £125m
 Year incorporated: 2007
 Turnover: £4.91m
 Growth theme: Health and wellbeing of the population

Cambridge-based Crescendo Biologics has developed biotechnology to generate fragmented human antibodies that can be used to develop medicinal products. The spinout from the University of Cambridge has created a pipeline of first in class T cell enhancing Humabody therapeutics, and in January 2022 announced a discovery collaboration with BioNTech to develop novel immunotherapies.

Goodlord

Equity raised: £56.6m
 Year incorporated: 2014
 Turnover: N/A
 Growth theme: Geopolitics and demographics

London-based Goodlord develops an internet-based system to simplify the house letting process. The company allows the creation of tenancy agreements, collection of holding deposits and online signing of contracts. The proptech company has attracted eight equity fundraising rounds, and plans to use its most recent investment round to fund its growth and acquisition plans, both domestically and abroad.

Tevva Motors

Equity raised: £104m
 Year incorporated: 2013
 Turnover: £377k
 Growth theme: Transition to a sustainable economy

Tevva Motors produces Electric Range Extended Vehicles (EREVs) for use in the urban delivery market. The Essex company has received 11 grants from the Innovate UK programme, totalling £10.8m. Its latest fundraising round of £41.6m is being used to accelerate the development and production of its electric and electric-hydrogen trucks.

Rising Stars of the Singer Growth Economy

Curve

Equity raised: £160m
Year incorporated: 2015
Turnover: £9.90m
Growth theme: Geopolitics and demographics

London-based Curve develops technology allowing users to connect their existing debit and credit cards into a single card and phone app. In 2021, the fintech firm announced the launch of Curve Flex, which allows users to convert any purchase within the past year into an instalment loan. Since launching in 2015, the company has attracted over 250,000 users and secured £160m in equity investment.

Matillion

Equity raised: £226m
Year incorporated: 2010
Turnover: £21.9m
Growth theme: Innovation and emerging technologies

Based in Greater Manchester, Matillion develops tools for data integration and transformation for cloud data warehouses, as well as providing analytics and reporting software. Since its incorporation in 2010, the big data unicorn has brought on customers such as Tui, Cisco and Slack, and has raised a total of £226m via six fundraising rounds.

Multiverse

Equity raised: £319m
Year incorporated: 2016
Turnover: £10.1m
Growth theme: Geopolitics and demographics

London-based Multiverse helps organisations such as Morgan Stanley, the NHS, Citi, and Capita to source and employ apprentices. It supports apprentices by providing training in leadership and data skills, and offering networking opportunities. Since launching in 2016, the company has secured £319m in equity finance via five rounds. Following a fundraising round in June 2022, the company plans to advance its expansion into the US.

Beauhurst is a searchable database of the UK's high-growth companies.

Our platform is trusted by thousands of business professionals to help them find, research and monitor the most ambitious businesses in the UK. We collect data on every company that meets our unique criteria of high-growth; from equity-backed startups to accelerator attendees, academic spinouts and fast-growing scaleups.

Our data is also used by journalists and researchers who seek to understand the high-growth economy, and powering studies by major organisations — including the British Business Bank, HM Treasury and Innovate UK — to help them develop effective policy.

We have specialist capabilities, deep experience, and a proven track record of client success in the UK small and mid cap market.

Our business is built on over 100 years of capital markets heritage and is today one of the largest corporate stockbroking platforms in the City.

Methodological notes, disclaimer and data policy

About this report

This report analyses the 40.6k private, high-growth companies that comprise the Singer Growth Economy. Companies that met one of Beauhurst's eight triggers (see page 5) and that have operations in at least one of the Singer Growth Economy Themes (page 3) are in scope.

The report also includes a ranking of the Top 50 high-growth companies using a three-year compound annual growth rate (CAGR) for the higher of turnover or employee headcount. To be eligible for the ranking, companies need to have grown their valuation by at least a 15% CAGR between 01/07/2019 and 30/06/2022 based on at least two equity finance deals during the period.

The report has been produced using Beauhurst's data on high-growth and equity-backed UK companies.

High-growth companies

Beauhurst identifies private UK companies that are high growth or have high-growth ambition using eight triggers. If a company meets one of the triggers (outlined on page 5), the company is considered to be high growth or have high-growth ambition. For more detail on the growth triggers, please see Beauhurst's website.

Equity finance deal valuations

To be eligible for the Top 50 ranking, companies need to be private, high-growth companies that secured at least two equity finance deals between 01/07/2019 and 30/06/2022. The deals needed to be at least three months apart. For all deals, clear and appropriate filings must have been completed at Companies House.

Turnover and headcount

In addition to meeting the equity finance deal criteria, companies need to have filed annual accounts at Companies House in the two years prior to 30/06/2022. Companies also need to have filed annual accounts for three years prior to the most recent set of annual accounts in order for a three-year CAGR to be calculated.

Companies have been ranked using the higher of a three-year CAGR for either turnover or headcount with the following restrictions:

- In order to rank on turnover, companies needed a minimum of £5m turnover in the latest year
- To rank on headcount, companies need at least 50 employees in the latest year

Opinion disclaimer

This report was prepared by Beauhurst (Business Funding Research Ltd), a company registered in England and Wales under company number 07312969, on behalf of Singer Capital Markets.

The views and opinions expressed in this report are those of the authors and do not necessarily reflect the official policy or position of Singer Capital Markets. Beauhurst is responsible for any factual inaccuracies related to the companies or individuals mentioned in this report.

Data policy

The legal basis by which Beauhurst processes personal data is Article 6(1)(f) GDPR – Legitimate Interests. Beauhurst only holds basic information such as names, job titles, shareholdings and directorships that are needed to identify the relevant individuals and organisations in the high-growth ecosystem.
